REPLY—Sweeny merely denotes atrophy or shrinking of the muscles and is induced, as a rule, by some injury sufficiently severe to cause lameness. The treatment in a general way consists of locating the point of injury and relieving the lameness. Stimulating liniments, vesicants, setons and even the firing iron are used to relieve these cases. The better plan is to first ascertain the point of injury, which generally necessitates the employment of a qualified veterinarian who can have the privilege of making a careful personal examination.

PLEURISY—I would like for some of the readers to tell me what ailed a pig I lost. It was about two months old; it was still running with its mother and fed ground rye and wheat middlings, milk and water. The first I noticed it was in the morning. It seemed stiff in all its legs, so I put it by itself; would lie down all the time and legs seemed to cramp. First day it would not eat, but second day it drank milk when I held it up, but that night it died. Next morning I opened it, but did not have time to make a thorough examination, as I had to go away. The intestines seemed natural and the liver slightly whitish in spots; lungs considerably dark in places and the outside of lungs covered with a whitish substance. Can anyone tell me what was the trouble and what treatment should have been given?—Minnesota Subscriber.

REPLY—It would not be possible to tell positively as to what killed your pig; but in the absence of a statement that others did not die, indicating some infectious disease, we are led to believe your pig had pleurisy. The treatment would consist in giving the pig warm, dry quarters, with the application of a stimulating liniment to the sides over the ribs.

TWIN COLTS—One of my neighbors' mare brought twin mule colts, one dead and the other one alive; it lived two days. The one that came dead was about the size of a grown rabbit; did not have any hair on it and was rotten; two of its hoofs had slipped off and one foreleg had rotted in two between the ankle and knee. The mare was bred in April and then late in June. Was it possible that she was in foal and breeding her again might have killed the first colt? And was there danger in breeding her in nine days?—Texas Subscriber.

REPLY—The mare perhaps conceived at both services and in the absence of other definite causes of the death of the first foal, it may be that the second service was responsible for the results. We would hardly think her a fit subject to breed as early as the ninth day. That would all be governed by her general condition.

OBSTRUCTED BREATHING—I have a young sow that seems to be healthy and all right except when eating and drinking. It appears like her head is all stopped up. She will eat a few mouthfuls and then will stop and get her breath through her mouth. While drinking, she will drink a little and then slop will run through her nose. I traded for her some time ago. The man had her in a pen without a nest or shelter. I feed her oats and wheat, with plenty of milk. What is wrong and what shall I do for her? I built a cover over her and gave her a bed.—Canada Subscriber.

REPLY—Your animal is either affected with chronic catarrh or the nasal passages are thickened from an invasion of certain germs that are capable of producing permanent thickening of the mucous membranes to a point that produces an occlusion. In either case, we do not think you are justified in giving very much time towards attempting a cure. Better encourage the animal to take on flesh before inclement weather comes on, and send her to the market.

STALLION RUBS MANE AND TAIL—I have a pure bred Percheron stallion four years old in good condition, but rubs mane and tail. I feed him oats and bran and prairie hay; everything clean and of the best. I have a box stall for him 12 by 16 and travel him through the country in breeding season. I would be very much pleased if you could give me a remedy for it.—Minnesota Subscriber.

REPLY—These are ailments that are difficult to control on account of being due to a variety of causes. Pruritus is often associated with a high state of flesh, and now that the breeding season is over, it is likely your stallion could be profitably reduced gradually. Reduce the amount of heating grains and let his diet be largely grass, alfalfa, etc. It would be a most excellent plan if this horse could be carefully worked. A sweating out daily would help very materially in improving the condition complained of. An occasional application of kerosene emulsion to the parts will destroy any parasites that may be a cause of the trouble. Further, a saturated solution of boracic acid containing one-fourth alcohol, will be found quite effective in arresting the itching.

BROKEN LEG—About the last week in May I had a horse get a hind leg broke at pastern joint. I put on bandage and splint and left it until the joint seemed to be knit and the foot was in proper position. He does not

PERCHERONS, BELGIANS AND GERMAN COACH MARES AND STALLIONS

of all ages for sale. I have recently taken over the entire stock of horses formerly owned by the firm of Ives & Bellman and can furnish patrons with first-class breeding stock of the foregoing breeds. Have a fine lot of last spring's and yearling colts, as well as mature stock to select from. Address, **WILL BELLMAN, R. 1, DELAVAN, WIS.**

PERCHERONS

A big bunch of young registered studs, 2 and 3 year olds, yearlings, sockets sound and with BIG SIZE. You will find that my herd is the best class of BIG PERCHERONS.

FRED CHANDLER,

Route 7. Chariton, Iowa.

PERCHERON STALLION—A BARGAIN

To trade, Sir Glewood 45666 P. S. of A.; nine years old; black; weighs 1800 pounds. A pleasure to handle him. Has never been over-worked as I have used the capsule system in breeding. Last year's work shows 82 per cent of mares in foal. Have had him five years and must dispose of him on account of his fillies. Want to trade for a No. 1 jack to weigh not less than 1000 pounds, and must be a good performer on mares. State what you have. I mean business.

CHRIS. J. WEITERER,

PRAIRIE VIEW, Logan County, ARK.

R. L. HARRIMAN, Bunceton, Mo.

The Fine Horse and Jack Auctioneer of the West

I sell more horses and jacks than all others. Terms always right: work always up to the highest standard.

WHITE OAK STOCK FARM

American bred Percheron Stallions and Mares.

The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to **D. Augstin, Carlock, Ill. R. F. D. No. 2.**

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Illinois.

Huntington :-: :-: :-: Indiana

put any weight on that foot in walking and holds it up most of the time when standing still. The joint is enlarged some, and is hard and stiff. Is there anything I can do for it in the way of outward appliances?—Nebraska Subscriber.

REPLY—If the joint was actually involved in the fracture, as you state, it will be a long time before your animal will recover to a point where it will be serviceable again. We believe the horse would have recovered more rapidly had you left the bandages on longer. It is quite likely that either the bones were not properly supported in position or that the joint is undergoing destruction. In the latter case, the joint will in time become stiff, but not necessarily interfere with the animal doing slow service. Recovery can be hastened by applying a vesicant to the part. For this purpose use one part of powdered cantharides to four parts of lard. After clipping the hair from the part and removing all dirt with a stiff brush, rub the blistering agent into the part affected with the hand for several minutes. Permit to remain on for 24 hours, then remove with hot water and soap, and when dry apply a small amount of olive oil. Repeat the blister in three weeks.

RESTLESS STANDING—I have a sorrel mare nine years old. While standing she will put one of her front feet out and after a bit she will bring it back and stand the other one forward. She does not go lame. This mare has been used quite a bit on the road and will weigh around 1,500 pounds. Would blistering her around above the hoofs be advisable, and what with?—Canada Subscriber.

REPLY—Restless standing may be induced by a variety of causes. If shod, your mare may be suffering from pinching, and yet not to a point to cause actual lameness. If the feet are dry and hard they may be contracted sufficient to cause the animal to be uneasy. Corns will also cause an animal to behave in a similar manner, as well as navicular disease. If shod, have the shoes removed and soak the feet daily in cold water. It can be arranged so that an animal can be made to stand in a tub of cold water for several hours at a time. This will be inclined to remove the inflammation from any cause. After the soaking is finished, oil the feet daily with vaseline to prevent drying out. Permit the animal to go barefoot, if possible, and keep off the roads.

Miscellaneous Horses

EXCELSIOR SHETLAND PONY FARM.

Registered stock a specialty a limited number for sale. W. H. Fulcomer, Prop., Belleville, Republic Co., Kas.

FOR SALE OR TRADE.

Dongola; Coach stallion; seal brown; weight 1,600; heavy bone; splendid style; good back and neck. Is licensed to stand in Illinois; sound; a very sure breeder. Colts all large, smooth and good colors. Works well double or single. Not afraid of anything. Was driven two years to school by my daughter. One of his colts took first in class of 22 last fall, with J. G. Truman as judge. Not registered. Foaled 1898. Will trade for a brood mare driving horse or young stock, or will sell cheap, as I have no use for him. Address,

W. L. JUSTUS, IPAVA, ILL.

REGISTERED MORGAN HORSES.

My Morgans ars large; 15 to 16 hands and 1050 to 1300 pounds; have clean, heavy bone and possess all of the style and endurance for which the breed is noted.

For Sale—Weanlings to 3-year-olds, by The Admiral 4871 A. M. R., he by Jubilee De Jarnett. Send for catalog.

Richard Sellman, Rochelle, McCulloch County, Texas.

SPOTTED STALLION AND MARE

with mare colt by side. Stallion four years old; 16½ hands high; has weighed 1400; black and white, equal parts; distributed over body nicely. A sure breeder. Mare six years old; 16½ hands; has weighed 1450; bay and white, equal parts; distributed over entire body. Colt marked right to three months old. Broken to all harness nicely. Accustomed to working together and extremely attractive. Will sell one, two or three. Might trade for one of those big jack colts.

V. C. WRIGHT,
Edgewood, Effinghnm County, Ill.

ADVERTISING BRIEFS

Look up the ad in this issue of W. L. Justus, Ipava, Ill. He is offering a Coach stallion for sale or trade.

A big horse ranch with all modern improvements is advertised in this issue by the F. Lazy H. Ranch, Helca, Nebr. Don't fail to see what the ad says.

A span of full-blood Percheron mares is offered for sale in this issue, or will consider a good driving horse as part pay. Address, Box 412, Traer, Iowa.

Read what Spohn Medical Co., Goshen, Ind., have to say of their medicine: "It is singular that so many horse owners obstinately oppose improvements in the care and treatment of horses, and yet all know that thousands die every year from improper treatment where one dies from natural causes. Are not all old methods our forefathers used as likely to be improved upon as many other methods which we accept daily? The old forms of treatment of distemper are no longer permissible, as smoking with burnt leather, feathers, rubber and the like, or carelessly 'letting it run its course.' Use Spohn's Cure, the up-to-date remedy."

Anyone contemplating holding public sales of live stock, should not fail to write Col. R. L. Harriman, Bunceton, Mo., for dates. He can please you.

Our readers should write to W. R. Bellows Co., 97 Warren Street, New York, and get a catalogue telling all about their "National" Oat Crushers. They have both hand and power sizes.

Jacks and jennets from yearlings up are advertised by J. R. Reynolds & Son, Guthrie, Mo.

The following letter is submitted as evdence to those horse owners unfamiliar with Absorbine, that they can use it to their pleasure and profit in the stable: "I am anxious to relate to you the experience I have had with your Absorbine. I have been somewhat slow in writing you on account of waiting to see if the cure is permanent. I had a mare with an enlarged hock the size of your two fists, which was caused from a bruise, and after doctoring for some weeks with the home veterinary doctors, I concluded to use Absorbine. In less than a week the lameness was gone and the hock was entirely cured and is today clean and as strong as ever before. I used hot water and woolen cloths for steaming the hock once a day and rubbed the Absorbine in thoroughly three times a day and it gave a quick, permanent cure.—W. Austin Cope, Jerseyville, Ill."

Phil Walker of Moline, Kans., is advertising good black jacks at reasonable prices. See his ad.

J. C. Huckstep, proprietor of the Fairview Jack and Jennet Farm, Eolia, Mo., is a regular advertiser in our columns. Write him if you are in the market for stock of this kind.

A fine lot of black Mammoth Kentucky jacks is offered for sale at special prices by Joe E. Wrght, Junction City, Ky. Mr. Wright wants to make room for his young stock, hence the special prices.

Imported and home-bred Percheron stallion and mares from $200 to $900 each is advertised for sale by H. Redeniuss, Rushmore, Minn.

Hart Bros., Osceola, Ia., ask our readers to see what they have in the way of imported and home-bred stallions and mares before purchasing elsewhere.

Anyone in the market for Clydesdale horses should write to W. A. DeMerritt, Plainfield, Ill., for prices. He also has Shorthorn cattle.

If your horses are troubled with moon blindness, try "Visio," advertised regularly in our columns by the Visio Remedy Assn., 2475 Calumet Ave., Chicago, Ill.

Anyone in the market for Percherons, Belgians or German Coach stallions or mares should not fail to write to Will Bellman, Delavan, Wis., and get his prices.

If any of our readers are in the market for a Percheron stallion or mare, it undoubtedly would pay them to correspond wth Fred Chandler, Chariton, Ia.

A. Latimer Wilson, Creston, Ia., would be glad to hear from any of our readers in the market for imported or home bred stallions.

Write to D. Augstin, Carlock, Ill., and get his prices on American bred Percheron stallions and mares. He has a large number to select from at reasonable prices.

D. K. Roth, Gibson City, Ill., importer and breeder of Belgians and Percherons would be glad to tell our readers about the stock he is offering for sale. He guarantees a square deal to all.

The Excelsior Shetland Pony Farm, owned by W. H. Fulcomer, Belleville, Kans., is advertising a limited number of registered stock for sale. If you are interested in stock of this kind, don't fail to write Mr. Fulcomer for prices and particulars.

Richard Sellman of Rochelle, Tex., is a regular advertiser in these columns of Registered Morgan horses, and will send his catalog giving description of his stock to anyone interested.

Anyone desiring to become an auctioneer should write to Carey M. Jones, president of the Jones National School of Auctioneering, No. 1 North Sacramento Blvd., Chicago, Ill., for a catalog telling how to learn to be an auctioneer.

For information concerning the Terre Haute Veterinary College, send for a catalog telling all about this school. Address the Terre Haute Veterinary College, Terre Haute, Ind., 249 South 3d St.

Write to A. R. Taylor, president of the James Milliken University, Decatur, Ill., for a catalog giving full information regarding this school.

The Fayetteville Commercial College, Fayetteville, Ark., would like to have any of our readers who are contemplating a business training to investigate their school. Their ad is in this issue.

Read the advertisement of the Chicago Correspondence Schools, 1017 Chicago Opera House Block, Chicago, Ill.

Anyone desiring to take a business course should not fail to write to the Ransomarian Business College, Kansas City Mo., for terms and particulars.

The Witte Iron Works, 2555 Oakland Ave., makes the most durable and powerful gasoline engines on the market. Gasoline engine men everywhere will tell you that the Witte develops the power, and that often, in proportion to power actually developed, the Witte is really as low in prices as any in addition to its superiority in other ways.

No other gate manufacturer has yet put out as good a gate as the American Farm Gate, made at 1457 Elmwood Ave., Kansas City. Railway companies and big ranchmen buy these gates in special sizes, but their regular farm gate is the thing for the average man who knows that it pays to put practical, permanent improvements on his land.

D. B. Gunn of Red Oak, Ia., makes the best road grader for the money on the market. For much road work, both public and private, it has no equal for doing the things that need doing, no matter what the price. Write Mr. Gunn. You are safe to order at once.

Right now—if you want to save money and get a corn cutter that will do the work, write to the New Process Mfg. Co., Salina, Kans., for the facts concerning their harvester. You can get it with or without binder attachment.

The superiority of the Auto-Fedan hay press over others has been proven hundreds of times. Here is just a sample of the conclusive tests through which it has won its high position.

"Auto-Fedan Hay Press Co., Kansas City, Mo.: Dear Sirs—I get better results and more profits from your Auto-Fedan than I do from any other press that I use. The other power presses are more expensive and it takes six men to operate them. I used last season four gasolne, three steam and seven horse presses. I will use more Fedan and do away with the big man killers, as help is so scare and high priced.—E. M. Whitehair, U. S. Contractor, Fort Riley Reservation, Junction City, Kans."

C. H. White, the Shorthorn cattle breeder at Burlington, Kans., has a few choice animals entered in the American Royal sale at Kansas City this fall. It will pay to get the Royal catalog later on and look these up. Mr. White has good Shorthorns at home for sale at all times.

J. Crouch & Son, Lafayette, Ind., write: "We are in receipt of a cablegram from Mr. George R. Crouch in regard to our winnings at the great Percheron Show held recently at Mammers, France. The following is the list of winnings we made at this Mammers show: In aged Percheron stallions, second in three-year-old Percheron stallions, first, second, third and fourth; in two-year-old Percheron stallions, third; in aged Percheron mares, first; in three-year-old Percheron mares, first; in two-year-old Percheon mares first and second; in best group of mares, first; so you will note that our stallions and mares have been highly successful at both the Paris and Mammers shows, showing the high quality of the importation we are bringing over this season."

The Lawrence-Williams Co., Cleveland, O.

HORSE RANCH FOR SALE AT A BARGAIN.

Owing to illness I am forced to sell my ranch, 640 acres deeded land, 640 acre homestead. Modern five room bungalow; hot and cold running water; furnace and bath. Barn, corrals; blacksmith shop; wind mills; tanks; supply tanks; 8 miles fencing; wagons; buggy; harness; hay tools; farming implements; 40 acres corn; 10 head saddle and work geldings; also 50 head of good brood mares and registered draft stallion. Price, $7,200 if taken at once. Address,

F. LAZY H., HECLA, NEB.

STOCK AND FARM
For Sale Account of Ill Health.

Farm contains 44 acres, on which there is 1,200 bearing apple trees. Balance is in grass. Improvements fair.

Stock consists of 6 good Registered Clydesdales (one 10 year old stallion; one 3 years; one 1 year and one colt; two mares, 7 and 4 years), and 3 grade horses.

Farm is ¼ mile from good town and 6 miles from county seat. Land all round here is being leased for oil, but I must sell at once and will give the buyer a bargain.

CHARLES HATFIELD, Calhoun, Ill.

MY BREEDING PLANT

For sale, located in Northwestern Ohio, in good moral town. Good house; two lots; fine fruit; big barn and an established business, including Percheron stallion, weight over a ton and a Clydesdale that can be made to weigh a ton; a grand son of Baron's Pride. They are extra good individuals; both sure and great breeders. Going to move away and must sell by September 1st.

J. W. SUFFEL, Edgerton, Ohio.

PARTNER WANTED IN HORSE FEEDING BUSINESS.

I would like to get in communication with a horseman, preferably in one of the following states: Virginia, West Virginia, Pennsylvania, Ohio, Kentucky or Maryland, on a horse feeding proposition. I have a good farm of 200 acres; two good size horse barns and plenty of feed. I would like for some horseman to put up the money and buy about eight head of three or four year old horses or mules in November, and let me fit them for market by March.

REMBRANDT MORGAN, Winfield, West Virginia.

CRUSHED OATS

ARE FAR BETTER FOR HORSES and cattle than ground feed. Get a **"NATIONAL"** Oat Crusher. Up-to-date stock farms are rapidly adopting crushed feed. Hand and power sizes. Send for catalog. Agents wanted.

W. R. BELLOWS CO., 97 Warren St., New York.

Truman's Pioneer Stud Farm, Bushnell, Ill., writes: "We had a very pleasant visit recently from our old customers, Messrs. E. L. McClurkin & Son of Louisa County, Ia. These gentlemen were looking for the very best Shire and Percheron stallions that they could find and were looking especially for greys. We sold them a dapple grey imported Shire stallion and a dapple grey imported Percheron stallion. Both of these horses have weighed while in our possession over 2,200 pounds each. Another of our old customers from Lousia County, C. A. Blanchard, was on the lookout for the best young Percheron stallion that he could procure and he finally selected one of our very best colts that we were exhibiting at the Iowa State Fair. Mr. Blanchard has a stud of pure bred Shire mares and is an old and valued customer of ours. To Messers. Dan Jordan and Arthur Blackburn of Marshall County, Ia., we hove sold a pair of imported Shire mares. We have also sold to Samuel Insull Esq., for his Hawthorn Farm, a yearling Percheron filly sired by Institule, which horse stands at the head of the Hawthorn Farm Percheron stud. This filly is one of the grandest animals it has been my pleasure to see. Plenty of weight and backed up by more quality than I ever saw on a yearling Percheron filly. She has been greatly admired by a number of Percheron breeders who have seen her. We also sold the same gentlemen the imported Percheron mare Ironie, a beautiful dark dapple grey weighing considerably over a ton and only recently imported."

Steel shingles are rapidly coming into general use because of their numerous advantages over wood shingles from the standpoint of durability and economy. The poor quality of the wood shingles of today in comparison with those used a generation ago undoubtedly has much to do with the increased popularity of steel shigles. Edwards Steel Shingles are the best known and most widely used. These shingles are made of the finest open hearth steel, heavily galvanized to prevent rusting. Each shingle is dipped into molten zinc, which gives a uniform coating to sides and edges. The patented interlocking device covers nails and makes a perfect joint, unaffected by heat or cold. The shingles come in large sheets 24 inches wide, 5 feet to 12 feet long and can be applied over wood shingles or sheathing 12 inches apart. Edwards Steel Shingles last five times as long as wood shingles. They make a handsome roof, that is rust-proof, fire-proof and rot-proof. The use of Steel Shingles enables the owner of the building to get a reduction in insurance rates of from 10 to 20 per cent. Thousands of barns are burned every year because sparks from passing trains or embers from bonfires ignite the wooden shingles. Steel shingles are sold direct from the factory, at factory prices. A copy of Edwards New Roofing Book can be had by writing direct to The Edwards Mfg. Co., 826-876 Lock St., Cincinnati, Ohio. If you give the size of your roof, the company will quote a lump price on the job.

Don't fail to look up the ad in this issue of Songer Bros., Lincoln, Kas. They are advertising a bargain in the way of a jack and three jennets.

J. W. Suffel of Edgerton, Ohio, is advertising his entire breeding plant for sale. Read the ad in this issue and write him for further particulars.

Rembrandt Morgan of Winfield, West Va., is advertising for a partner in the horse feeding business. Look up his ad in this issue.

J. E. Thompson, The Farmer Land Man, of Tecumseh, Kans., is advertising a number of real estate bargains in this issue. See what the ad says.

Hal C. Simpson, of Denison, Iowa, is advertising two English bull dogs for sale in this issue. Read the ad if in the market.

Anyone having an extra large, fine jack to exchange for a stallion should look up the ad in this issue of C. E. Brown, Mainville, Ohio, and write him for particulars.

For highest quality Hampshire hogs, write to R. B. Steele, Maloy, Iowa. His ad appears in this issue.

G. F. Lucore of Arriba, Colo., has full blood, high class Aberdeen Angus cattle for sale. If interested, write him for particulars.

Any one in the market for a Collie dog should write to Monroe Newton, Maloy, Iowa. He has them for sale.

Any one in the market for Aberdeen Angus cattle should write to R. R. Lucore, Arriba, Colo., and get description and price of the ones he has for sale.

Write to R. M. Boyer & Sons, Farmington, Iowa., if you are in the market for either Chester White hogs or Hampshire sheep.

Read the ad in this issue of V. C. Wright of Edgewood, Ill. He has a spotted stallion and mare and mare colt to sell or will trade for jack.

S. S. Rowe of Clifton Hill, Mo., is offering a trotting stallion for sale cheap, as he is going to quit the business. Read the ad.

Ten boars and seven sows are offered for sale in this issue by O. T. Rarick, Lamont, Okla.

Three hundred dollars buys a registered Percheron stallion. If you are interested see the ad in this issue of W. H. Ramey, Lakeville, Ohio. He also has two German Coach horses for sale.

We are advertising in this issue a book called "Traction Farming and Traction Engineering." This book gives you what you want in the way you want it, and is written so you can understand. It treats in a thoroughly practical manner all there is to know of traction engineering. It explains all about the operation of gasoline and oil traction engines; pulling plows; threshing machines; farm pumping stations and lighting plants, etc. Everything is clearly described and explained and illustrated. Explains the principle of the action of the two and four-cycle gas engines. Tells about gas engine cylinders and pistons—their construction and care—valves, valve chambers, carbureters, spark coils, magnetos, dry batteries, etc. Explains in an understandable way how to adjust valves, how to test for the best grades of either gasoline, kerosene or alcohol, and also how to vaporize either of these liquid fuels. Tells of the best methods of modern ignition, etc. Describes how storage batteries used for ignition purposes are constructed and how to care for them properly. Gives directions how to charge with fluid batteries when an electric lighting circuit is not available; describes various cooling systems, etc.

The writer has always regarded the Auto-Fedan Hay Press (advertised regularly in these columns), as the best on the market. The Ross Bros., who invented and perfected it, were in the hay baling and shipping business long before they ever made a press and they knew what they wanted. Here is a sample of hundreds of letters in which other practical hay press men indorse the Auto-Fedan as just what we have considered it—the best press on the market. Read this letter—then the ad.

"Auto Fedan Hay Press Company, Kansas City, Mo.—The Auto Fedan Self-Feed Hay Press I bought of you last season is the only self-feed I ever saw that would feed. It makes such nice square bales, no danger of the wires slipping off at the end even if they are loose. I have baled three tons per hour at ordinary rate of speed. My team came off at end of season in good order. Other presses use from four to six horses, and they are nearly worthless at the end of the season. Also the low table is very convenient for baling from the buck rake, saving much labor. My neighbor, Mr. Phillips, saw mine and says he wants one this season.—C. W. Rowe.

N. H. Landes, Americus, Kas., has a 400-acre Missouri farm advertised for sale in this issue. He says it is a snap. Any one in the market for a farm would no doubt do well to investigate this.

Anyone wishing to trade a 1000-pound jack, or over, for a Percheron stallion, should look up the ad in this issue of Chris. J. Weiterer, Prairie View, Ark.

L. D. Norris, Redding, Ia., wants to exchange some young black jennets for a good jack. Look up the ad in this issue.

The most economical corn binder made is provided in the binder attachment for the corn harvester, made by the New Process Manufacturing Company of Salina, Kas. See ad in this paper.—Advertising.

One hundred and sixty-three thousand square miles have been cleared of the fever tick in the Southern States, equal to the area of three states. The farmers there are bringing in improved stock and will soon contribute materially to the meat supply.—United States Department of Agriculture Report.

MARE 35 YEARS, WITH FIRST COLT AND ITS SIRE.

The above is a picture of Clay Gentry, p 3, 2:16, by John R. Gentry, p 2:00½, owned by J. A. Watkins, and Dolly Dunn, aged 35 years, and her first colt, Dunn Gentry, fifteen days old. The mare is the oldest by seven years that ever brought a colt; she is standard bred and was in matinee races in Memphis thirty years ago. There can be no doubt as to her age, for she has been in the family thirty-one years. She was bought by the late John W. Falls of Memphis when she was four years old; he kept her twenty-two years and then gave her to his sister, Mrs. Dr. Dunn of this city, who has had her over nine years. The mare was bred to Clay Gentry May 30th, 1912, and the colt was foaled May 15th, 1913. The colt is a very classy looking youngster and will be allowed to go as a stallion, as Ashland Wilkes, the great grandsire of the colt, is 30 years old, and John R. Gentry, the grandsire of the colt, is 22 years old, and through these long-lived blood lines it is hoped that the colt will establish a race of long-lived horses.—Democrat-News, Warren, Ark.

THE RIGHT WAY

IN ALL CASES OF **DISTEMPER, PINKEYE, INFLUENZA, COLDS, ETC.,** of all Horses, Jacks, Mules, Brood Mares, Colts, Stallions, is to

SPOHN THEM

On their tongues or in the feed put Spohn's Liquid Compound. Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the disease germs. It wards off the trouble no matter how they are "exposed." Absolutely free from anything injurious. A child can safely take it

50 cents and $1.00; $5.00 and $10.00 the dozen. Sold by druggists, harness dealers, or sent, express paid, by the manufacturers.

Special Agents Wanted.

Jack Sores Cured

By Using Jack Sorine. Sold With a Cash Guarantee.

O. P. WILSON SERUM CO., Kansas City, Mo.

Enclosed find my check for $5 for a package of your "Jacksorine" for jack sores. This is for a neighbor and shows on its face that your salve is doing my old jack's leg some good.

June 5, 1913. W. H. HAYS, Bloomfield, Ky.

We guarantee Jack Sorine to cure any sore on the legs of a jack or stallion, no matter how long it has been sore or what caused it. You know we have a good⅛, reliable remedy or we could not guarantee it to cure all sores on the legs of stallions and jacks, without any restrictions. It is put up in a substantial box and sent promptly by mail. It is a paste and applied with a small brush.

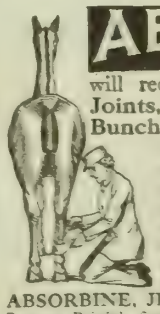
Send money by bank draft or P. O. money order. Price $5.00.

O. P. Wilson & Co., 3754 Wayne Avenue, Kansas City, Mo.

Don't Have a Blind One

"VISIO"

A Remedy for Moon Blindness



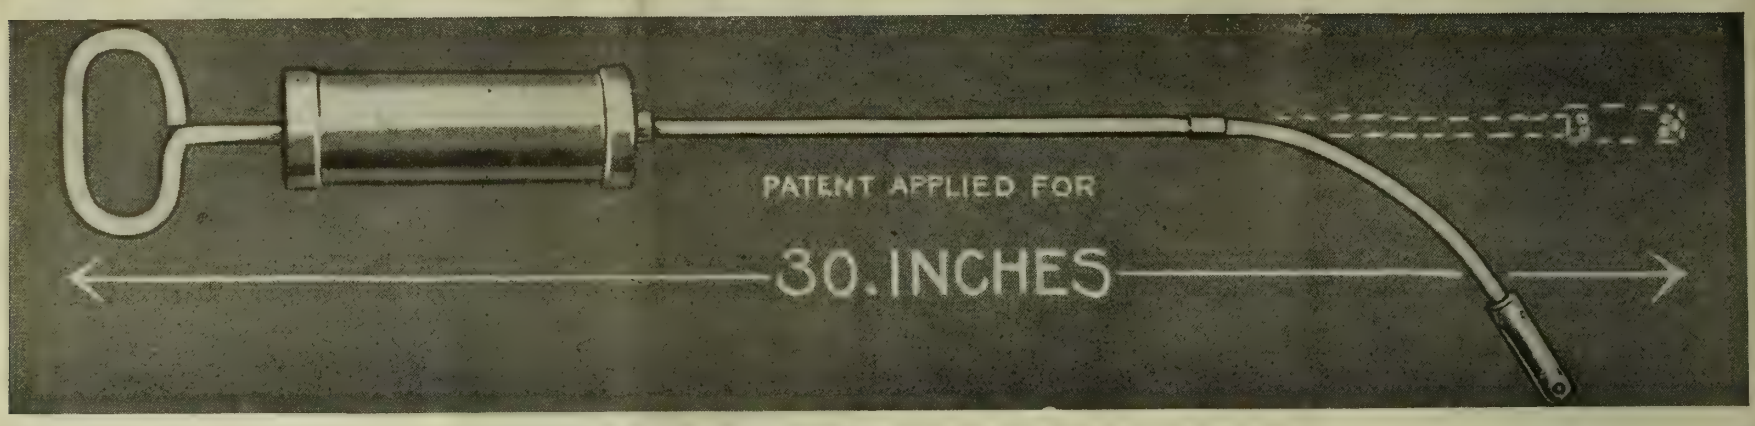
(Opthalmia), **Cataract and Conjunctivits Shying horses all suffer from diseased eyes.**

"VISIO" will convince any horse owner that it is the best remedy for defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our money back GUARANTEE.

$2.00 per bottle, postpaid on receipt of price.

VISIO Remedy Ass'n. 2475 Calumet Ave., Chicago, Ill.

ABSORBINE



TRADE MARK REG. U.S. PAT. OFF.

will reduce **inflamed, swollen Joints, Sprains, Bruises, Soft Bunches; Heals Boils, Poll Evil, Quittor, Fistula, or any unhealthy sore** quickly as it is a powerful antiseptic and germicide. Pleasant to use, does not blister under bandage or remove the hair and you can work the horse. $2.00 per bottle, delivered. Book 7 K free.

ABSORBINE, JR., antiseptic liniment for mankind. Reduces Painful, Swollen Veins, Goitre, Wens, Strains, Bruises, stops pain and inflammation. Price $1.00 per bottle at dealers or delivered. Will tell you more if you write. Manufactured only by

W. F. YOUNG, P. D. F., 368 Temple St., Springfield, Mass.

BREEDING OUTFIT AT COST

THE IMPROVED CARLSON SEMEN EXTRACTOR AND CAPSULE SYRINGE

This extractor has been improved so that it is much easier to use. The proper temperature can easily be maintained. Anyone should have good results with this instrument by following the directions carefully. This is the only instrument made that has been successfully used for getting the semen from the uterus. We believe this instrument with its improvements will make it possible for any ordinary breeder to use the capsule system successfully. It has a soft metallic point that will stand bending a thousand times. All necessary directions will be sent with the instrument.

Pointed Breeding Capsules

We have the only capsules made especially for horse breeding Some capsules do not dissolve, leaving a foreign substance in the uterus which will prevent conception. Other capsules are too flimsy to use for this purpose. You cannot make any mistake by buying capsules from us as we only have one kind. We have them boxed with 100 in each box. The box is tight so they will be clean. These capsules are properly baked and all bacteria killed before they are mailed. Always keep the lid on the box when not in use.

Price per box (100), $1.50.

Bulb Impregnator

This is the best bulb impregnator on the market. Some dealers sell for $5 and $6.

Price, $2.00.

Veterinary Thermometers

This thermometer is recognized and used by the leading veterinarians for taking the temperature of animals. It has a metal case which insures it against breaking and will last a life-time. It has a small chain with pin in it that may be fastened to the vest pocket and carried with safety.

Price, $1.25.

Thermometer

Tested and used for keeping water at the right temperature.

Price, $1.00.

SPECIAL OFFER

¶ Many breeders are planning to buy a capsule breeding outfit next spring. It will be better for all such to make a beginning this fall. Conditions are more favorable and the opportunity to get some actual experience before the heavier spring season begins, is invaluable. To encourage every breeder to take this step now we make the following special offer:

¶ One Improved Carlson Semen Extractor with the New Point Protector, attached, and one box of 50 Pointed Breeding Capsules, all for $5.00.

Microscopes

For use in testing the semen of stallions or jacks. Magnifies 500 times and is used by veterinarians and physicians. Price $35.00. Boxed in fine case. These instruments are of great value in the breeding business. Through them you can see for yourself and show your mare owner the live spermatozoa of your sire.

Curved Metal Impregnator

This instrument is sold by other dealers for from $5 to $6. It is nickel plated, about 22 inches long, with a glass tube in it.

Price, $4.00.

Breeders' Bags

Three sizes, small, medium and large. Stallions weighing 1,200 or 1,600 pounds usually require a medium size. These bags are guaranteed not to tear from any cause before March 1, 1914. If they do tear before that time return the top part with our stamp on it and 35 cents in cash and we will send you a new bag.

Price each, $1.00.

Directions for Ordering

Send money orders or draft as exchange is always charged on personal checks. Always name your express office as well as your post office address in order to insure prompt delivery.

POSTAGE AND EXPRESS PAID ON ALL ORDERS.

THERE IS BUT ONE STATE FAIR IN KANSAS.

THE KANSAS STATE FAIR HUTCHINSON, SEPTEMBER 13-20, 1913

THERE IS BUT ONE STATE FAIR IN KANSAS.

Under the Management of the State Board of Agriculture.

THE KANSAS STATE FAIR IS THE GREAT ANNUAL EVENT OF THE STATE. IT IS EDUCATIONAL, INSPIRATIONAL AND RECREATIONAL.

$40,000.00 IN PRIZES FOR EXHIBITORS

17 general departments. Everything is exhibited—from traction engines to pickles. Textile Fabrics, Art—everything useful, ornamental or decorative in the home, the handiwork of women.

It Is the Natural Meeting Place of Breeder and Buyer

The Horse Show—Tuesday Wednesday and Thursday Nights—Under Domes of Electric Lights—the Great Feature—Barns' Hippodrome

The HORSE SHOW feature is new in Kansas. The most beautiful and best trained horses in the world will be at the Kansas State Fair. We breed them and train them out here in the West and market them in the wealth centers of the world. They are to be seen at the Kansas State Fair first. Last year there were 600 exhibitors and 7,000 exhibits—this year there will be more. One freight rate for round trip on all Kansas railroads to the Kansas State Fair, Hutchinson.

112 acres in the State Fair Grounds, owned by the State within the city limits. ELECTRIC RAPID TRANSIT RAILWAY and cement walks to the grounds. STEAM RAILROAD SPUR, City Water and Electric Lights.

SIX GREAT RACES RAILY—The representatives of the blood of the Kings and Queens of the turf will be here. Patterson's Carnival and Animal Show—Grand Free Attractions, the costliest ever brought to the State. Cornet Bands and Orchestra Music. American Flags Flying and Fluttering everywhere, which together with throngs of people, create a GRAND, INSPIRING, ENTHUSIASTIC SCENE.

Everybody Invited to Exhibit. **Everybody Invited to Attend.**

Special Trains—Special Equipment and Special Service on all railroads. It is just A NICE AUTO RIDE from any part of Kansas over the ideal roads of this ideal state. Make arrangements for a few days off for the State Fair.

THERE IS BUT ONE STATE FAIR IN KANSAS.

THERE IS BUT ONE STATE FAIR IN KANSAS.

The James Milliken University

A Christian College, offering full Classical and Technical Courses. Seven fine new buildings, including ladies' dormitory, all with modern equipment. Co-educational. Superior Faculty. Expenses Low. Over 1000 students last year. For catalog, address,

A. R. Taylor, President, Decatur, Ill.

Your Son and Daughter

Will enjoy the summer in the OZARKS. Why not let them attend a practical business training school this summer and fall, where the climate is worth the money? Training for business or position. If interested investigate.

Fayetteville Commercial College, Fayetteville, Ark.

SHORTHAND IN 30 DAYS

We absolutely guarantee to teach shorthand complete in only thirty days. You can learn in spare time in your own home, no matter where you live. No need to spend months as with old systems. **Boyd's Syllable System** is easy to learn—easy to write—easy to read. Simple. Practical. Speedy. Sure. No ruled lines—no positions—no shading, as in other systems. No long list of word signs to confuse. ONLY NINE CHARACTERS to learn and you have the entire English (or any other) language at your ABSOLUTE COMMAND. The best system for stenographers, private secretaries, newspaper reporters, lawyers, ministers, teachers, physicians, literary folk and business men may now learn shorthand for their own use. Does not take continual daily practice as with other systems. Our graduates hold high-grade positions everywhere. Send to-day for booklets, testimonials, guarantee offer, etc.

CHICAGO CORRESPONDENCE SCHOOLS

HAVE YOU ENOUGH ALFALFA

How Many Acres Have You Or Your Neighbor Producing Less Profitable and More Uncertain Crops Which Might be Growing Alfalfa? How Good It Really Is.

So much has been written about alfalfa that many people, who do not actually know this very practical and very valuable feed and market plant, have come to look upon it as a "book farming" crop, which makes interesting reading, but has no immediate application to their needs and business.

Quality considered, there is no more widely useful farm crop than alfalfa, and as a complete feed for farm animals, it is not equaled by any other single plant that grows. This is not mere assertion; its truth has abundantly been proven, and few, if any, can be found who will dispute it. It is not our wish, however, in presenting the above, or what is to follow, to induce our readers to at once change any considerable acreage into alfalfa at the expense of other crops that have been giving reasonable satisfaction. We are prompted to review, somewhat briefly, a few of the practical points of this crop, by the fact that, scattered all over the country, are men owning good alfalfa ground in tracts from the size of town lots and acre "patches" in the edges of towns up to hundreds of acres, who have never raised a stalk of alfalfa, who (as in the case of many town lot owners) are letting rich ground grow up to weeds, or who (as in the case of many who own larger tracts) are annually growing crops which do not net them over half what alfalfa would, and are wearing on their land, when alfalfa might do it good.

We ask you, Mr. Reader, to test this statement right now by conditions in your neighborhood. How many can you name who have fields or "lots" which might much better be growing alfalfa than what they are producing? Have you for yourself, for your own satisfaction and profit, determined what alfalfa can do for you?

If you are a stallion owner living in or near a small town there is more than likely opportunity for you to secure for the asking the use of several acres of rich land, which put in alfalfa will not only produce a lot of feed, but will furnish an object lesson to your patrons which may be worth thousands of dollars to them.

Clover Not a "Complete Substitute."

We have heard men who grow fine red clover, mixed with timothy and orchard grass, on their land, remark that they did not need alfalfa. It is true they are in better shape to do without than many who were first forced to it, and for whom it has made small fortunes—as farm fortunes go. But even the successful clover grower would be much better off if he could get the fields he wants for permanent meadow down to alfalfa. Land which does well in clover is not always well enough drained for alfalfa, but many a clover field, put down into alfalfa, will turn out 50 per cent more feed, at a very moderate estimate. Moreover, the feed will have a greater value per ton for feeding or for sale. Alfalfa in the swath is not damaged so much as is clover by rains or dews, although it justifies, even more than clover, the practice of care to prevent damage. Alfalfa in the stack stands weather better than clover.

Both the above are really minor virtues, but we mention them because we know men who have put off making a start with alfalfa because they feared it would be difficult to handle. Men who buy ground feed for their live stock will perhaps be impressed more by the fact that very high grade alfalfa is as high in digestible nutrients as much of our modern process wheat bran. That is, that a ton of very high grade alfalfa may be worth every cent as much for feeding a brood mare, or a milk cow, or a mule colt, as a ton of wheat bran bought at the nearest mill. What does your bran cost you?

The above statement should be taken for exactly what it contains. Alfalfa hay, from coarseness, from shattering in handling, from damage by rain or from spoiling in stack or mow, may be reduced 50 per cent below the maximum, although the chances that this will be the case are no greater than with clover or cow pea hay. Wheat bran, in some states, has been improved in quality by the passage of laws requiring a certain per cent of protein. In other states there is nothing to keep the miller from scraping and bolting out of his bran everything that has helped to give this product a standing as feed. No one can estimate the money which the stock growers of this country could have saved in bran bills if the alfalfa production had been what is should, the past 15 years.

How Its Use Has Grown.

Fifteen years ago (according to the common street corner and fence corner information) there were a lot of places about the barn and stock farm where it would not do to use alfalfa hay. Since that time we have found that, if reasonable judgment is used, there is hardly a place where it cannot be used to advantage. Often it is the main ration, and thousands of head of live stock are annually wintered on alfalfa alone, though it is never recommended as an exclusive feed. Even in cases where it is thought best to feed it rather sparingly, it nearly always takes the place, partly or wholly, of some more expensive feed. Southern and eastern dairymen, and poultrymen too, buy great quantities of it, ground (a process which secures a lower freight rate, for one thing), the mills being in the alfalfa districts, whence it is shipped in bags across a half dozen states. Much of this alfalfa meal is used with other ingredients in making patent feeds which sell at high prices, but which still (thanks to the value of the main constituent) give general satisfaction. But if these live stock owners can afford to pay an extra manufacturer's profit and an extra shipping charge how much better off is the man who grows it and can feed it on his own farm, green, cured or chopped and mixed with other feeds.

The almost worldwide distribution of alfalfa should make any farmer in any state feel reasonably sure of making it grow if he has some well drained and reasonably rich land. It is, of course, practicable to provide artificial drainage, and to artificially enrich or otherwise strengthen a soil; alfalfa has paid many a man dividends on these very expenses. But there are thousands who can secure a fine field of alfalfa without doing either. In most cases, their own state agricultural experiment station can give them explicit directions if they feel the need of them. Many people need only to do a little visiting around among the neighbors who are already growing this crop. Alfalfa has been grown successfully in Maine. In California it has been grown so long that it has become almost like one of the native plants. In New Mexico there are fields a generation old. Professor Hansen's introduction of hardy sorts from Siberia is putting alfalfa fields north in the Dakotas to the Canadian line. In the capital of Nebraska the writer knew a real estate man who started himself in the dairy business by leasing and seeding to alfalfa hundreds of town lots in the outskirts of the city. The loess soil along the Missouri river from Omaha to Booneville grows alfalfa to perfection wherever it has been tried. The narrow valleys among the flinty mountains of Arkansas seem to grow it equally well. Mississippi has thousands of acres proven capable of producing five crops a year without more difficulty than Kansas growers experience in getting three or four crops—and Kansas is generally credited with being the state that made alfalfa famous. On the fine old farms of Kentucky, Ohio and Virginia it has been found that many years of cropping had left the soil deficient in lime, but that the addition of ground limestone made it possible to grow abundant crops of this plant.

Alfalfa and the Percheron.

And so it goes. We marvel at what a few little provinces in France have done toward supplying this great country with improved draft horse blood. But France, as far back as we know the Percherons, has had alfalfa; over there they call it lucerne. Is it necessary for some of us to be another hundred years learning our lesson from France?

Of course, there is a lot to be learned about alfalfa, but luckily, by using care and common sense, many who need it and who have ground that will grow it, can just as well be raising some while they are learning more about it. The talk about inoculation scares a good many people out. It need not; more than likely, you who have been stopped by that very thing, can get a good start without inoculation. If ground has already been producing other legumes (plants of the pea family) like clover, cow peas or the wild sweet clover, alfalfa may do well on it. If a neighbor has a vigorous, healthy looking alfalfa field, buy or borrow a few loads of soil from him and scatter it on part of the field you are seeding. Mark the spot on which you put it, accurately, so you can make sure as to results. Do not haul soil from a field that does not seem to be doing well. If your inoculation works satisfactorily you can soon furnish your own inoculating material. Unless you have reliable alfalfa literature, write your experiment station for instructions about this inoculating. But in all your work remember this; that good, rich soil, mellow enough to let the air down into it even after it is well firmed down, and the best of tilth, are mighty big factors in getting a good start.

In the latitude of Kansas City, land to be seeded to alfalfa this fall should already be plowed and well worked down. Late plowing (unless it receives heavy rains) is likely to be too open and loose. Land should be plowed deeply and long enough

HOW GOOD ALFALFA IS COMPARED WITH OTHER CROPS.

Kind of Crop.	Season's Crop Per Acre (Green Wt.)	Weight of Dry Matter	Total Digestible Matter	Digestible* Protein
Alfalfa	34,100 lbs.	8,000 lbs.	5,280 lbs.	875 lbs.
Corn (entire plant).....	28,000 lbs.	5.800 lbs.	3,800 lbs.	300 lbs.
Red Clover	18,000 lbs.	5,220 lbs.	3,200 lbs.	491 lbs.
Oats and Peas	13,000 lbs.	3,120 lbs.	2,521 lbs.	350 lbs.
Timothy	10,000 lbs.	3,500 lbs.	2,000 lbs.	228 lbs.
Rutabagas	31,700 lbs.	3,400 lbs.	3,000 lbs.	279 lbs.
Mangels	25,000 lbs.	3,500 lbs.	2,750 lbs.	232 lbs.
Sugar Beets	17,800 lbs.	2,500 lbs.	1,800 lbs.	213 lbs.

*In determining the value of any food the amount of digestible protein contained has greatest weight, as this is the most costly constituent in a balanced ration.

(Table from New York Experiment Station Bulletin.)

before seeding time so that it can be worked down firm, and free from air spaces. Where the summer rainfall is enough to provide a store of moisture, wheat ground can be disked immediately after harvest and the disk followed by stirring plows set deep. Harrows should follow closely after the plows to prevent moisture evaporation as far as possible, and a disk harrow set straight, or better a sub-surface packer, should follow the harrow. Alfalfa is successfully started in such land (seeding with a press drill, preferably) any time from August 20 to September 20, when the rainfall has got the ground thoroughly moistened. Later seeding can doubtless be practiced farther south, and good farmers can follow and have followed successfully, many plans different from the one outlined. This one is safe, however. Much alfalfa is sown in the spring. It should be sown after frost danger is past. Land seeded in the spring should be very free from weeds. In spring seeding, the same as in fall seeding, land should be plowed from one month to several before it is seeded. The ground should always be gone over just before drilling time with some implement that will destroy all the little weeds that have started, but will not stir the soil much below the surface.

Starting It In Dry Regions.

In dry regions, land is sometimes plowed and kept fallow for several months or a year, killing all weeds and keeping the surface loose, until enough moisture has been stored to give the young alfalfa a quick start. In these regions it has been found that keeping the young alfalfa clipped short in summer reduces evaporation and conserves the moisture supply.

This article is not supposed to contain complete directions for growing alfalfa. There is no such thing practicable for a great territory such as the American Breeder reaches, and practical men do not need to have every step worked out for them. What is given, however, is given from a knowledge of the plant and of conditions and from the actual practices of successful growers, and does not overestimate the possibilities or desirability of this truly great crop. Few farmers will have any trouble determining how and where this information applies to their particular needs. Its mission is simply—more alfalfa.

SWEET CLOVER.

To the American Breeder:—Many inquiries are coming in in regard to sweet clover as a crop.

Where alfalfa does well sweet clover is not to be considered as a crop. Many persons, especially in the irrigated regions, consider sweet clover as a pest. It may become so under some conditions.

There is no crop that will more quickly show beneficial results as a green manure crop than sweet clover. On run down lands it is excellent for this purpose. It is also an excellent crop to seed in orchards to plow under where it is advisable to plow under a leguminous green manure crop.

In spite of the prejudice against it, it is capable of being made into a valuable hay. In fact, there are a number of growers in Colorado who are doing it. Kansas, Iowa and Nebraska are growing considerable quantities purposely, for feed.

Where alfalfa does well there is no need of attempting its growth, because sweet clover only lives two years unless allowed to re-seed itself, while alfalfa is a perennial.

Frequently to bring heavy clay or adobe lands into a good state of cultivation and more profitable crops, sweet clover is an excellent thing to use. In places where the land is too wet for alfalfa it can be grown as a crop and something obtained from the land. In the alfalfa field, however, it is a weed that should be fought, because the grower is trying to produce alfalfa and any other crop present is undesirable.—J. Alvin Keyser, Colorado Experiment Station.

THE FIXATION OF NITROGEN IN THE SOIL.

To the American Breeder:—It is a well known fact that either fields or unbroken land allowed to run without tillage will gradually increase in nitrates, sometimes as much as twenty-five to thirty percent. For a number of years this was a matter of much discussion and was explained in various ways. However, it was finally discovered that this was the work of bacteria and that these bacteria take free nitrogen from the air and convert it into plant food in the soil. This process is called "nitrogen fixation."

There is another process of fixation which must be distinguished from the process just mentioned and that is the process which takes place in the nodules on the roots of leguminus plants. Both of these processes of fixation are brought about by bacteria but the organisms which cause them are entirely different. The bacteria which work in the nodules will not fix nitrogen in the soil, while those which work in the soil will not fix nitrogen in the nodules of legumes.

The bacteria which fix free nitrogen in the soil are capable of doing their work rapidly. It has been demonstrated quite conclusively that they are able to fix considerable amounts of nitrogen in as short a time as ten days or two weeks when all of the controlling factors are favorable. Only a part of the factors which control their work have been determined, but some of the more important ones are known. Probably one of the more important of these factors is the addition of lime to the soil as it seems that lime is a great help to these organisms in carrying on their work. They usually work in the first foot of soil or in that part which is reached by the plow, but as previously stated, they may also work in soil that has never been tilled.

The value of their work can hardly be estimated in dollars and cents, for they work almost the entire year storing up in the soil this most costly of plant food, while at the same time they are practically unaided in their work and do not cost the farmer one cent.—C. L. McArthur, Assistant Bacteriologist, Idaho Experiment Station.

GOVERNMENT CROP FIGURES FOR THE FIRST OF AUGUST.

This table (for Indian corn), shows the marked decline in condition which took place in most states during July:

STATES.	Per Ct. of U.S. Acreage in States	CONDITION. Aug. 1 1913	July 1 1913	Aug. 1 1912	Aug. 1 10-yr. Av.

ACTION TAKEN AGAINST HORSE DISEASE IN MONTANA.

"To stave off a federal quarantine against Montana on account of the prevalence of dourine in the western part of the state," says the Rural Spirit," "the live stock sanitary board at its recent meeting, adopted regulations prohibiting the running at large of stallions in a certain described region, and ordering the gathering of all stallions within that region not later than August 1. One paragraph of the order directs owners of stallions and mares to gather them for inspection at a given place on a given date by the state veterinarian or his deputy. The order in full is:

" 'To whom it may concern: Whereas, it has come to the knowledge of this board that dourine exists in the state of Montana, and, upon investigation, it is hereby determined that said disease does exist; and

" 'Whereas, The board is authoritatively informed that it is the intention of the United States government to immediately quarantine the state of Montana in case said disease is not eradicated, or confined, or studs prevented from running at large;

" 'Therefore, it is hereby ordered, that no studs shall run at large within the following described area, and no mares shall be bred within the following described area until their studs have been tested and found free from disease, and no mare that has been exposed to dourine shall be bred until it has been blood tested for dourine and released; and

" 'It is further resolved, that all owners of stallions and mares shall, when demanded to do so by the state veterinary surgeon or his deputy, gather all their stallions and mares and have them at a given place on a date named by the state veterinary surgeon or his deputy, for the purpose of having the same tested and examined; and

" 'It is further ordered, that all studs within the following described area shall be gathered and held in restraint not later than August 1, 1913, and on and after that date the state veterinary surgeon be, and is hereby authorized to gather all studs found running at large on the open range in violation of law, and to castrate them, and, if found diseased, to castrate or destroy them, the expense thereof to be borne by the owner of such studs.

" 'Beginning at the point of crossing the Montana-Dakota line, in Custer County, by the Chicago, Milwaukee & St. Paul railway; running in a westerly direction along the Chicago, Milwaukee & St. Paul railway to the mouth of Sandstone creek; up Fallon creek to Cottonwood; up Cottonwood; thence in a westerly direction to the head of Horse creek; down Horse creek to Powder river; thence in a northerly direction, following the coarse of the Powder river to the Yellowstone river; thence in a westerly direction along the Yellowstone river to the mouth of Sunday creek; up Sunday creek to 106 west longitude; thence north to Timber creek; down Timber creek to the Big Dry; thence down the Big Dry to the Missouri river; then in an easerly direction to the North Dakota line; thence south along the Dakota line to the point of origin.

" 'It is further ordered, that no stallions in a herd where dourine has been discovered shall be allowed to run at large on the public range, even if such herd is not within the above restricted district.' "

Good Farms; How to Get More

A Suggestion to Chautauqua Organizers for a Program that Will Pass On to Others the Benefits of Successful Farming Experiences. Power and Fertility Emphasized.

What is a good farm? This question was propounded by an individual who has been an examiner for a farm loan company for many years. He stated that a good farm was a farm with a good live stock farmer on it. Then he said, a successful farmer must have plenty of horse power so that the plowing can be done satisfactorily and the soil be well tilled at the proper times.

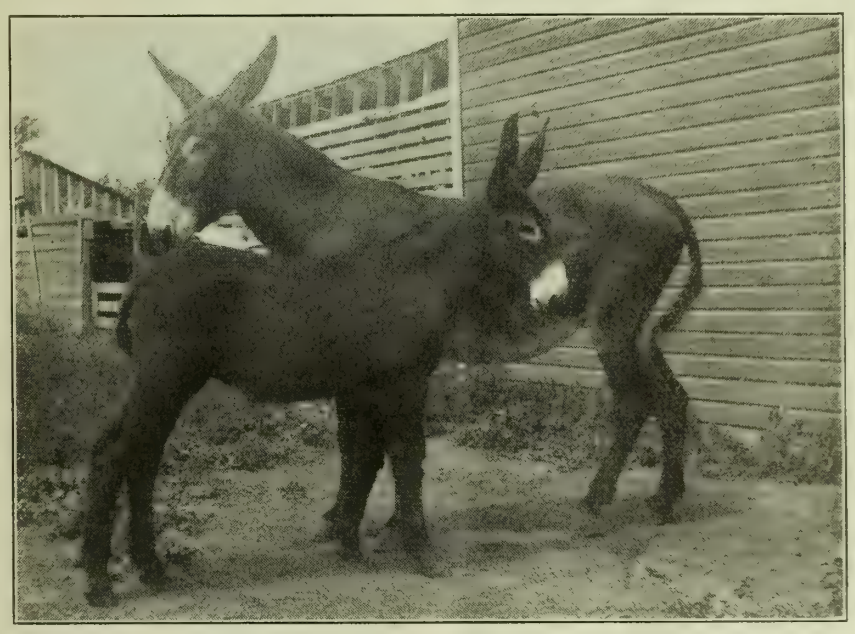
Every successful man in any line of business is a silent teacher for others, but why not give these successful farmers an opportunity to give their experiences for the benefit of others.

Many attempts have been made in some communities to hold agricultural meetings, at which scientific farming and live stock subjects could be discussed by able speakers. The attendance often has been small. Just why this condition exists we cannot explain. A 'balloon ascension," or some other attraction having as little value, might draw an enormous crowd. This is another case where the leaders in a community must use their influence for the advancement of agricultural production.

The writer attended an entertainment a few days ago where a number of influential citizens had pledged their support to guarantee 750 individuals in attendance daily for several days' time. It was a very pleasing entertainment and a recreation for many, but if these same individuals would father an agricultural meeting, where good speakers and demonstrators could easily be had, and which would give local talent an opportunity to be heard—those who had actually been successful—the farmers in that vicinity would be stimulated instead of being discouraged. In some communities just such organizations have doubled the production of the farm land.

The writer was greatly impressed by a statement made at such a meeting by a farmer who had been a renter several years, and was giving his experience in handling run down farms. The farm he mentioned was very foul and had not been profitable. The neighbors told him that he would starve to death, but he leased this farm for a term of years. It was a hard pan farm. He secured the right to plow the land in the fall. He used a large lister with a substantial sub-soiler, hitching to it five big horses. He plowed as deep as the lister would operate. The following spring he split the rows after the weeds had started slightly, listing it just as deep as possible. After listing he would harrow the furrows about half full, then plant it, so as to give the corn an opportunity to get started ahead of the weeds. He continued to harrow the corn and plow it with a plow especially prepared for listing corn, so that at the finish the ground was smooth and in excellent condition. He raised more corn on that land that season than had been raised on it the previous five seasons all told. At the end of this lease he was able to buy a farm. Here was something to interest and help every owner of land.

There was a time when Farmers' Institutes were scoffed at. They called it "farming on paper." But farmers have learned the good that comes from gatherings of farmers or breeders, where intelligent men deliver lectures or give their experiences with successful methods. One of the successful plans now adopted by many of the county farm advisers, is to advertise a picnic and not call it a farmers' meeting. This seems to get good results. There are many summer picnics being advertised now. Would it not be a good plan for public spirited individuals to start similar movements? A suitable location and date could be advertised and a few select speakers arranged for, as at a commencement. It does not take many men to start a farmers' picnic. This is one class of men that should mingle together and receive the experience of others living in their particular vicinity. There is much difference in the soil and in other conditions in different sections, but where farmers congregate at a farmers' picnic the successful ones are usually safe for others to follow in that immediate section.



At such meetings the live stock industry should not suffer neglect, for it offers the best means of maintaining soil fertility. But stock should not be kept for that particular purpose alone. Only the best animals thoroughly developed, should be advocated. A day's rest at a farmers' picnic would be enjoyed and much benefit derived. A more complete organization should be adopted later. A farmers' picnic will serve nicely as a beginner.

INSPECTORS TO FOREIGN COUNTRIES TO STUDY MEAT PRODUCTION AND SYSTEMS OF INSPECTION.

As a result of a misunderstanding created by press dispatches announcing that Doctors A. D. Melvin and Edward C. Joss of the Bureau of Animal Industry have been dispatched to South American countries and Australia to investigate meat production, the secretary of the United States Department of Agriculture has received many letters from farmers and others protesting that the department should encourage domestic production of meat instead of encouraging foreign shippers to bring their product into competition with the local product.

David F. Houston, secretary of agriculture, has replied to these letters that the primary object of sending these inspectors abroad is neither to encourage nor to discourage the export of meat to the United States, but to make certain that the Department of Agriculture understands fully the conditions under which meat offered for entry into the United States is produced, slaughtered, packed and shipped. The data gained by these foreign inspectors will be directly useful to the government in seeing that meat offered for admission to the country conforms not only to the Meat Inspection Act, but also to the Food and Drugs Act, which has recently been held to have jurisdiction in interstate commerce over meat and meat food products. Armed with this information, the department can co-operate effectively with the secretary of the treasury in keeping out of the United States all meat produced from diseased cattle, all meats slaughtered in unsanitary establishments or improperly refrigerated, packed and shipped and all meat products prepared under conditions that would not be permitted in the federally inspected establishments of the United States.

The secondary object of the trip, as explained in the letter of instruction to these inspectors is to look into the general condition of the live stock industry in the foreign countries, the growth of that industry, the countries to which they are now exporting live stock and meat and the probability of future shipments into the United States. The inspectors also are required to study the transportation facilities possessed by these foreign packers and exporters of meat and meat products and to give particular attention to their method of refrigerating and storing.

CAPSULE JACK COLT AT 117 DAYS. PROPERTY OF T. E. COLLINS, Republic county, Kas.; 49 inches high; 46 inch heart; 6½ inch bone (fore leg). Jennet is 15½ hands; 70 inch heart.

FOR MORE RELIABLE VACCINES.

Beginning last month, all serums (including hog cholera serum) and all viruses and toxins used in the treatment of domestic animals manufactured by firms doing interstate business, must go to the farmer with the government's stamp of approval. Congress appropriated $25,000 last March to be used in investigating such manufacturing plants and issuing licenses.

Before the new rule went into effect, Dr. J. R. Mohler, chief of the pathological division of the Department of Agriculture, was in Kansas City inspecting the fourteen plants that had applied for licenses under the new act. Doctor Mohler said that no licenses would be issued unless the conditions of the plant and methods of preparation reasonably insure that the product will accomplish the objects for which it was intended.

MANY HAVE HAD THIS EXPERIENCE.

To the American Breeder:—You will find enclosed a postoffice money order for $9.50—the best money I ever spent for advertising.—O. T. Karr, Nodaway County, Mo.

INSPECTION STOPPING USE OF PRESERVATIVES.

No attempts to use prohibited preservatives and coloring matters were discovered in the 26,889 samples examined in 1912 in the meat inspection laboratory of the United States Bureau of Animal Industry, for the purpose of detecting prohibited preservatives, or coloring matter, adulterants, or unwholesomeness of various kinds. The condemnations resulting from laboratory inspection have been made principally because of rancidity of oils and fats and the use of cereals in prepared meats without proper declaration on the label.

INFECTIOUS GRANULAR VAGINITIS IN COWS.

To the American Breeder:—This is a true venereal disease of cattle, conveyed mainly, though not entirely, by copulation. Unlike similar diseases in human beings the symptoms are more acute in the female than in the male.

Since arriving in Fort Collins last November, I have examined a large number of cows, and every one is suffering from the disease. About 90 per cent were affected in Boulder. In the North Park and neighborhood of Laramie, Wyoming, where I spent many years, I do not believe that any were affected.

Small nodules are to be seen on the tips of the vulva with streaky red patches of inflammation and a scanty discharge of pus. Many cattle suffer very slightly, but there are enough cases of complication to make the disease of greater economic importance, especially to the dairyman, than any with which we have to deal. Very many sufferers are hard to settle with calf, and a considerable number are permanently barren. Abortions, difficult calving, and retained placenta become common, together with septic inflammation of the womb. I have noticed a troublesome form or garget, not very severe at the time, but resulting in the loss of one or more quarters. Rheumatic pains of the fetlock joints and even growths on the valves of the heart have resulted in my practice. Treatment of individual cases will bring some results but of course will not check the prevalence of the disease. There can be little profit in the dairy industry unless concerted measures are taken for its control.—A. W. Whitehouse, Colorado Agricultural College.

AS THE AMERICAN ROYAL BROADENS.

Breeders of Jersey cattle in Kansas City territory have secured for their favorite breed a classification in the American Royal Live Stock Show. During the 14 years which the American Royal has been running at Kansas City no dairy cattle have been shown. The show began with Hereford cattle only. Then it was extended to include Shorthorn cattle. Later a Poland China hog show was held in connection with the Royal, but regular departments for hogs were not provided until some time after a draft horse show had become a feature. The last American Royal included all the leading beef breeds of cattle, nearly all important classes of horses and mules, the leading breeds of hogs and sheep (including Angora goats) and a good show of poultry and pet stock.

Efforts have been made to add on exhibits of agricultural products, but the directors have stayed by the original plan to the extent of remaining exclusively a live stock show; providing, of course, the Students Judging Contest can be so classed, and the agricultural college students who compete are live enough to make up for any lack in their qualifications as stock.

Now the bars are down to the dairy cattle, and the Jerseys have already walked in. Why not?

We should quit thinking of tuberculosis as a hereditary disease and realize that it is an infectious disease. In extremely rare instances a calf may be born with tuberculosis, but such instances are so rare that they are unimportant.—Dr. M. H. Reynolds, Minnesota University Farm.

THE AMERICAN BREEDER

With which is combined

THE STALLION AND JACK NEWS.

A Journal of Live Stock Improvement and Modern Breeding Practices.

FRANK B. GRAHAM and T. W. MORSE, Editors.

Published semi-monthly (on the 5th and 20th of each month) by the

GRAHAM PUBLISHING COMPANY, INCORPORATED,
225 WEST TWELFTH STREET,
Kansas City, Mo.
BELL TELEPHONE, 4297 GRAND.

Chicago Representative,

New York Representative,
RODENBAUGH & MORRIS, Inc.,
459 Fifth Avenue Bldg.
Telephone Gramercy 4532.

All communications for this paper should be addressed to the American Breeder, or the Graham Publishing Company, and not to individuals.

Advertising Rates.

1 inch: 1 month, $5.00; 1 time, $2.80.
½ inch: 1 month, $2.80; 1 time, $2.00.
Rates for longer time or larger space furnished on application.

Subscription Price.

One Year, $1.00; Three Years, $2.00.
In Clubs of Four, Per Year, $3.00.
For Canada and all Foreign Countries, $1.50 Per Year.

When sending subscriptions, please state whether they are renewals or new ones. Always renew under the same name and initials as previously used, and at least two weeks before your present subscription expires, so that you will not miss any number. When changing your postoffice address, state the old address as well as the new one.

If you miss your paper please notify us at once and all lost copies will be replaced.

Entered as second class matter November 28, 1911, at the postoffice at Kansas City, Mo., under the Act of March 3, 1879.

Copyright, 1913, by the Graham Publishing Co.
All persons are warned not to reprint any part of this paper without first securing written permission from the American Breeder, Kansas City, Mo.

CONDITIONS MUST BE CONSIDERED.

In a recent very interesting article an agricultural writer told of a certain farm in the South which is being operated with more than the usual success, and which has never been plowed over three inches deep. The fertility of the soil is so well maintained that in 15 years the crops of Indian corn (grown alternate years), have averaged over 60 bushels per acre. Cotton was alternated with the corn and legumes were used along with barnyard manure produced on the place, in maintaining humus and helping in the nitrogen supply.

The point is that a well educated farmer, after experimenting (in what appears to have been a thorough manner and covering several years), with deep plowing for this particular kind of soil, decided that he got no increased yield whatever to pay for the extra expense of this method of cultivation. This was contrary to the teaching he had had at the time, and is contrary to the experience of many successful farmers handling other kinds of soils.

It can hardly be doubted, however, that this man finally settled upon a method particularly well adapted to his soil and situation, and the lesson his experience teaches, if always borne in mind, will prevent many discouragements and save us many times from mistakenly condemning some practice because of its failure to "work" in a particular case.

Conditions must always be considered, and the man with his land and labor invested must use his head. A little independent experimenting can be made to teach many of us important facts about our own farms. Such experiments must be kept within bounds, as to time and expense required, and must be conducted carefully and closely observed, so that no wrong conclusions be drawn.

Many successful farmers work out some problem of importance to them every year or so, by testing carefully two or more common ways of conducting some farm operation. Their conclusions might not fit the case of every other farmer, but when properly reached they fit their own farms, and that is what counts.

A BREEDING LESSON.

The Bureau of Animal Industry has recently obtained data confirming the modern idea in animal breeding; that there is no influence from a previous impregration, on subsequent progeny.

The registered Morgan mare, Baby Gates, bred by the Department, was bred for the first time to a Grevy zebra by artificial impregnation. She foaled a female hybrid on June 2, 1912. At the first period of heat she was bred to the registered Morgan stallion, Pat Murphy, and on May 14, 1913, foaled a filly which is an excellent individual of the breed and absolutely free from any of the markings or other characteristics of the zebra. Ewart's investigations with the Burchell zebra gave the same results.

Farmers, therefore, need not hesitate to breed their mares to a jack for fear that the mare will become "saturated" or "impregnated" so that subsequent progeny by a stallion will show the characteristics of the jack. Although the Bureau has made no experiments on this subject with other animals it is very doubtful whether telegony occurs in any species of animals. In animals which give birth to more than one offspring at a time, it is possible for the characteristics of more than one male to appear in different individuals. For example, if a Berkshire sow is bred to a Duroc-Jersey boar and Chester White boar in the same period of heat, some of the resulting pigs will probably be red in color and others white.

Only one spermatozoon is required to fertilize one ovum. Where several ova (eggs) are given off at each period of heat, as is the case with sows, it is possible for a sow to give birth to such a litter, when bred in this way. The same probably is true of bitches, cats and similar animals.

Several cases have been noted this year where mares have foaled twins, one a horse foal and the other a mule. The mares were bred to a stallion and a jack during the same period of heat.

Supposed cases of telegony will usually be found to be due to promiscuous service or to a reversion to some remote ancestor.

A PAPER'S DUTY.

At a recent meeting of an important association of veterinarians, report was made to the effect that an Illinois breeder of Holstein cattle had trafficked in tubercular dairy animals. The American Breeder does not carry this man's advertising, and would not, and for that reason omitted his name from our report of the meeting. There are a number of papers, however, who have had paid advertising from this man for from a few months to several years. It would seem that the least they could do to warn their readers against the possible danger into which the papers had led them by carrying advertising of this kind, would be to name the man and give the information which had been brought out in the meeting. So far, however, we have noticed only one paper which has taken this honorable course. The Twentieth Century Farmer, following its report of the meeting, stated that it had carried the advertising of the breeder in question, but immediately following the revelations which the veterinarians had made, had given the party a chance to guarantee that the practices complained of would cease. Failing to get the assurance required, it barred his advertising from its columns and so informed its readers.

This is simply showing a decent regard for the rights of its readers and a desire to observe the rules of common honesty and we do not suppose the Twentieth Century Farmer is asking any special credit for what it has done. But what is the proper name for the papers (and there are several) which, having had the same opportunity to know and tell the truth, continue to take pay for and carry the advertising of this man who has been publicly shown to be a menace to health of their readers? Do they not know that this carelessness as to the character of their advertising and this disregard of their duty to their subscribers may cost the best lives in some of the families to which their papers go? Such ignorance is unbelievable. Is it possible they do not care?

LOST MARES.

Occasionally mare owners move about so that the mares cannot be watched. If the mare locates in strange country frequently the mare owner will claim that the mare did not raise a colt and does not wish to pay the service fee. There are men also who will evade paying these debts when they think they are out of reach of the stallion owner.

We are going to try a method by which these mares can usually be located and collection made. Stallion owners should work together and help make these collections. If the mare owner knew that the stallion owner could write to another stallion owner at his new home and find out all about what he had, they would not be so liable to try to evade these honest debts.

The American Breeder has the names and addresses of 125,000 stallion and jack owners in this country. Where we do not have a regular subscriber, some breeder can usually be found to cooperate with him. Our readers can write us asking for the name of a breeder at any other town in the United States, enclosing a self-addressed postal card. We will write the name and address on the postal card and return it so that correspondence can be started between the breeders. When writing to a stranger on this subject, a self addressed stamped envelope should be enclosed for an answer. After it has been found that the mare has a colt, the owner of the mare can be written asking for the service fee. If he refuses to pay it, then further arrangements can be made between the breeders. All such mares should be looked after soon or at least while the colts are still with the mares. After they are weaned it is difficult to find out whether the mare had a colt or not.

We are only trying this as an experiment. If it proves satisfactory, and without too much correspondence, we will continue it.

HIGH HORSE MARKET.

During July and August prices for horses, seasonable in this market, has been higher than ever before at this time of year. All of the markets have cleaned up most of their surplus stock, up to this date. The various demands for horse power have been sufficient to absorb the supply, even though railway building and similar work has been much lighter than usual.

In the large cities the summer months have increased the demand for horses, owing to the severity of the work and shortage of proper equipment. Some cities are contemplating passing ordinances that no horse shall work more than ten hours a day, so as to lengthen the life of animals and keep them in better condition.

The water problem has caused a great loss. Many drivers will not water their horses often enough to preserve their strength. Buyers and sellers generally contend that the future for serviceable animals is bright.

SOUTHERN DRAFT STALLIONS.

A southern subscriber writes that he can purchase a 1500-pound registered horse for $1,000. This horse was sold to a company in his vicinity some years ago for $2,400, and he asks our advice about purchasing this horse.

A 1500-pound stallion is not a draft horse in the commercial horse market. A draft gelding must weigh 1,600 pounds to be classed as a draft horse. But there are many sections in the south and some parts of the west, where a 1500-pound stallion serves as a fore-runner, or pioneer for larger stock. A stallion of this kind should be bought for about $600 cash. There is very little market for them in the north as stallions, and if gelded would not be worth nearly that much money. There are many under-sized draft stallions that have an abundance of action, smooth conformation, and are good lookers, which could be purchased cheap and used with success in these localities. Any one wanting a stallion of this kind usually can be supplied by writing to some of our advertisers.

Many of these stallions will breed big stock; they have not been properly matured, yet are out of good ancestors. We should like to see all of these stallions used somewhere. The farms need bigger horses. Just because many localities have purchased these little horses, at long prices, is no indication that they cannot be purchased at a fair market value for cash. A nice little draft stallion that has been taught to move good, will usually get a lot of good mares, and give good results, where the mare owners have not had any experience with heavier horses. Just as soon as a large horse can be used, the size should be increased. The biggest and the best are the most profitable in the horse market.

CROP INCOME INSURANCE.

In another part of this paper we publish an argument in favor of a very much more general planting of alfalfa. There are many points worth considering which it does not touch and one which will get attention just now, is the value of alfalfa as furnishing a crop income insurance in times of drouth. Two cases have just come to the attention of the writer in which alfalfa seed crops, matured during the very period of heat that was "puting the fixings" on promising fields of corn, will bring in the neighborhood of $35 per acre. Preceding the seed crop, in each case, the alfalfa fields produced one very fine cutting of hay, and fall rains will make one other cutting of hay certain. These cases are in different sections. They undoubtedly represent hundreds of others, and should represent ten times as many as they do.

It is not the value of these particular seed crops to which we are interested in calling attention. It is the fact that they were grown at the very time and under the very conditions that were giving these particular sections a whole or partial failure of what they consider their most important crop—corn. We submit that putting a part of ones land in a crop which will bring $35 per acre when the crop on the other part does not pay for the raising, is a mighty good way to insure one's crop income.

MILO MAIZE.

Farm papers over the territory in which crops have been affected by dry weather are devoting space now to feed crops, which, if planted at once, will help provide against winter shortage of stock feed. Very complete information in this line has been put out for several years by the various agricultural colleges, and all farmers who have not mastered this information have had opportunity to secure bulletins containing it. It

is often the case, however, that those unfamiliar with the drouth resisting crops recommended, look upon them as "last resorts,' and inferior in quality to the more tender crops they have been trying to raise.

One crop concerning which this is a mistaken idea, is milo maize. It has not been so widely grown that we feel like saying it can be successfully grown wherever Indian corn does well, but we suspect that it can. All we wish to mention here is the quality of the grain it produces. Milo maize is similar in growth to the Kafir corns, with which many people not familiar with these crops doubtless have confused it. Kafir has been shown to have a value for ensilage very nearly equal to Indian corn (in some sections, with average seasons, it is greater, acre for acre), and milo maize should not prove greatly different.

But the grain of milo maize is not nearly so hard to masticate as is the grain of Kafir. It is as large as a fair sized popcorn kernel, and not quite as hard as an average grain of yellow dent field corn. It threshes clean and yields heavily, and in the latitude of Kansas City should mature a crop if properly planted in wheat ground as soon as the wheat is cut. A little milo maize each year might reasonably prove worth any man's while.

BREEDING SCHOOL DATE CHANGE.

After consulting with many old students and hearing from many prospective new ones, the Graham Scientific Breeding School has decided to hold its next term in November, instead of December, as previously announced. The November term will be the only term in 1913, following the successful August term, just closed. Exact dates, and further particulars concerning some new features of this school to be introduced next term, will appear in the next issue of the American Breeder.

MARRIAGE LAWS.

Wisconsin has recently passed a law requiring applicants for marriage to pass certain health tests and to receive health certificates in order to marry. This subject has been discussed pro and con and will always be a debatable subject in the minds of some.

Under existing conditions in that state applicants might find it convenient to have the ceremony performed under another state law. It may be some years before all of the states will have a similar law; then foreign countries may be invaded. But this particular law will have its moral effect upon the citizens of that state. It will make many hesitate, knowing that they cannot pass the required examination.

It would seem to us that another provision might have lasting benefit, and that is to sterilize criminals and defectives. Most of the crimes, and unsound persons, can be traced largely to ancestors with unsatisfactory records.

A state law might be enacted clothed with the authority to sterilize criminals of a standard penalty, and defectives which are confined in public institutions. This would not only be a blessiing in many cases to the future generation, but an immediate benefit to many of these particular individuals. If every state had such a law it would be a much better country in which to reside, and this would give a lasting benefit. There would be fewer criminals in the near future, when this became generally understood common knowledge.

Some may say that this would be a brutal operation. Sterilization of the male is very simple; even though the patient should object, it would not be very difficult or painful. This should especially be considered with imbeciles and those confined in asylums where complete recovery is beyond reach.

PARTIALLY PERSONAL

Dr. Samuel Shelden, State Veterinarian cf Missouri, has resigned to take a job with a company manufacturing live stock vaccines on a commercial basis.

Nothing now need seem impossible, since Willis L. Moore has been pried loose from his job as chief of the U. S. Weather Bureau. Even the Weather Bureau may become of some use.

Fads, generally speaking, are among the banes of this country. But the support which has come to the many good roads movements as a result of our inborn faddism, is mighty welcome.

Tom Borman, of the Kansas Farmer, told the K. S. A. C. journalism students that $150,000 to $200,000 was enough for establishing a farm paper. Several new papers doubtless will be announced soon.

President H. J. Waters, of the Kansas Agricultural College, has refused an offer of the management of the Southern Development Association. The salary offered was $12,000, or nearly double that he gets now.

Col. T. C. Callahan, of Omaha, who, as a live stock auctioneer, has done a valuable constructive work in his and adjoining states, died recently from the effects of a severe day's work during the extremely hot weather.

A headline in one of the good market papers, qualifies the editor "right off the reel" for the job he holds. It reads:

"Sixteen Loads of Hogs From Oklahoma—Many Old, Familiar Faces are Seen at the Yards."

I. D. Graham, well known to many of our readers as secretary of the Kansas Improved Stock Breeders' Association, and one of the best agricultural editorial men of the West, has been made assistant chief of the Panama Exposition.

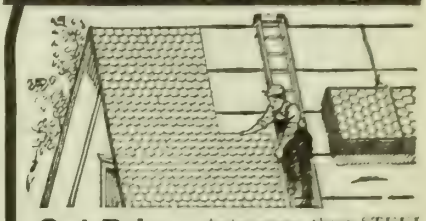
The Kansas City Star reprints a story from the Detroit News-Tribune, relative to the stallions the government is standing. In this it states that the government farm "in a few months will be buying in countless thousands of colts." Evidently the reporter's live stock experience has been limited to guinea pigs—or silk worms.

Two good men from "other walks of life," have been added to the forces of agricultural journalism. They are Geo. C. Wheeler, who has gone from the Kansas Agricultural College extension department, to associate editorship of the Kansas Farmer, and Chas. Dillon, head of the Department of Journalism, same college, who becomes managing editor of the Mail and Breeze.

Why should the express companies worry over the cut in their rates ordered by the Interstate Commerce Commission? In a few months they would have to cut the rates themselves or lose much of their business to the Parcel Post.

A mule merchant is said to have paid $500 for an oil painting of a mare mule, for which he paid $300. We are waiting to be shown. Horse market men prefer those green and yellow lithographs as a means of remembering valuable animals. And speaking of pictures—how did you like our jack conservatory on pages 8, 9 and 10, last issue?

Scientists at the University of Pennsylvania are inocculating bedbugs with leprosy for experimental purposes, says the Kansas City Star, and the University Missourian suggests that they could render a real service to humanity if they'd give 'em lockjaw. Which, to a certain extent, serves to locate the infected region.



Cattle breeders should not forget that manure may be contaminated with the virus of infectious abortion and that the disease may be spread in this way.—Dr. M. H. Reynolds, Minnesota University Farm.

Wood Shingles Won't DO!

In this 20th Century AGE OF STEEL, wood shingles are fast disappearing. They cost too much, they rot out too quickly, too much trouble to put on; too apt to catch fire. That's why 100,000 men have come to put these beautiful Edwards STEEL Shingles on their buildings.

Edwards Steel Shingles **never** burn nor rot. Come in big clusters of 100 or more, which makes them ten times as easy to put on as **wood** shingles. Each Edwards STEEL Shingle is dipped in **molten zinc AFTER** it is cut. No raw or exposed edges. No chance for rust ever to get a foothold. And the patented Edwards Interlocking Device, which allows for expansion and contraction, gives **PERMANENTLY water-tight** joints.

Edwards STEEL Shingles

Get Prices As to prices, these STEEL Shingles are far below wood. For we sell direct from factory to user and pay the freight ourselves. Just get our latest Steel Shingle Books and Prepaid Factory Prices. Then **compare.** Then see if you can afford common wood shingles when you can buy genuine Edwards STEEL Shingles at these prices. Give dimensions of your roof if possible, so we can quote price on entire job. Send postal today and our Catalog 870 and Prices will reach you by return mail.

OUR ADVERTISEMENTS

represent firms and articles that we believe to be reliable.

We refuse all whisky and beer advertising and all advertising of medical nostrums and questionable medicines, and medical institutions. We refuse all "get-rich-quick" scheme advertising, fake jewelry, and cheap, sensational book and music advertising. We refuse to carry the advertising of live stock breeders and importers who have become notorious for crooked or disreputable practices.

This advertising, such as we refuse, pays the highest rate to the papers that will take it, and 'asks no questions." When you see this kind of business in big, well-established, money-making papers, therefore, you have some idea of the income the American Breeder sacrifices in refusing to carry it.

If you believe we are doing right and deserve your cooperation, investigate the institutions and firms for which we do advertise, write for their catalogs, buy from them when ycu can, and always mention the American Breeder.

Remember that the prices and quality of advertised goods are more sure to be right than any others, for advertised goods are sold faster, sold more direct, and sold in more open competition than any others.

Kerosene Engine

The SANDOW Stationary Engine runs on kerosene or gasoline. Starts with 3 cranks—throttle governed—hopper cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—only three moving parts—portable—light weight—great power—10-day money-back trial. Sizes 2 to 20 H. P. Send postal for free catalog.

Dry Weather An Influence

Heat Losses Helped Horse Demand. Shortening of Crops and Water Supply Brings Runs of Cattle and Hogs. Prices in all Lines Well Maintained.

The market for horses and mules is withstanding drouth pressure better than any other division of the markets. In fact, only a few horses have been sold owing to the dry weather, and the big city loss from heat and lack of the right kind of care has created considerable demand. Practically all of the principal markets have reported a good inquiry for two weeks past and prices are holding above the July level. The South is beginning to increase its orders for both horses and mules, and while Eastern demand shows evidence of increasing, lack of quality has proven a check on the volume of business. The principal market offerings have been medium horses and fair to good mules. The best market indication, dealers say, is that each week has witnessed a good clearance, and prices have shown but slight fluctuations.

The trade is expecting to hear the cry of the horse plague from Western Kansas; in fact, owners of horses in those sections so stricken a year ago, are keeping close watch for the first evidence of its return. Just a year ago the plague was the most destructive, and to all observation, very hot weather had influence on the death dealing. This year in those sections there are few horses on the open range, a fact that may prove a safeguard to any trouble this year. Should any trouble along that line start this year, the experiments of last year, especially with false cures, will be eliminated.

From now on the trade should show considerable expansion, both as to receipts and demand. July and the first two weeks in August, other than the holiday season, are the dullest of the year. Accepting that period this year as a fair criterion, the fall trade will be brisk. Cotton states are in a position to use both horses and mules, and with no labor trouble in sight for the Eastern coal districts there should be a ready outlet in that direction. Construction work is at low ebb and will expand later, drawing the usual amount of horse power.

Reports from the Northwest were sales of large numbers of range horses were held, indicate a good demand and little better than seasonable prices. The entire country in the Northwest, both irrigated and grazing sections, have fared better this year than for a number of years past, and the expansion of the dry farmer will continue with increased demand for horse power. Some horses are going into the Canadian Northwest.

The following quotations are for serviceable sound horses and mules 4 to 7 years old:

Horses—	
Draft, choice, 1600 lbs. up	$265@300
Drafters, fair to good	175@250
Chunks, good to choice	150@185
Chunks, fair to good	125@150
Expressers and light draft	85@150
Plain workers	50@ 85
Southerns, good	150@175
Southerns, plain to fair	85@145
Plugs	20@ 60
Mules—	
13 to 14 hands	$ 90@130
14 to 15½ hands	125@175
15½ to 16 hands	170@235
16 to 16½ hands	230@300

Unsettled Cattle Market.

Drouth conditions in all of Kansas, parts of Nebraska, much of Oklahoma and Missouri, and the dry region increasing each day has made the cattle and hog market decidedly unsettled. The chief interest has centered in cattle, as that class of stock had reached the crucial stage in production and these dry districts were laying foundations for increased herds. The drouth as yet has not compelled a general movement in stock. In fact, ranchmen have been holding on by their eyebrows, as it were, hoping that conditions would change. The date of the real drouth began July 1, and since then practically no growing rains have fallen in Kansas, parts of Missouri, and Oklahoma. Not only is the grass gone but stock water is a serious problem. Without doubt more cattle have been marketed owing to the lack of water than to the scarcity of feed. In the past two weeks shipments have been delayed by shifting cattle from one pasture to another, or else feeding cotton seed cake on grass. Now the time is here when general shipments cannot be delayed much longer. On Monday, August 4, more than 30,000 cattle were received in Kansas City. This was the first effect of the drouth. Later that week the run was checked and up to August 12 the run remained light, but in the past few days the movement has been liberal and well above requirements. In the first two weeks this month prices have fluctuated 35 to 65 cents on fat steers and now are about 15 to 35 cents lower than the first of the month on fair to good steers and about steady for choice to prime grades. Prime steers in both the light and heavy weight kinds sold as high as $9 in Kansas City, and up to $9.10 in Chicago. Only a small number have been good enough to land above $8.50, and the great part of the steers for killing sold at $6.50 to $8.25 on the native side and at $5.50 to $6.50 on the quarantine side. The effects of deficient weight in grass fat cattle will be felt later in the year and with a corn crop of less than 2,400 million bushels this year beef will be scarce in 1914. Those who finish steers for the late winter market will receive high prices, and it looks as though anything that comes in the grain fat line will be high. Districts near cotton seed mills will feed freely unless the price for hulls and cake are advanced beyond reason. The Northwest has a good hay crop and doubtless will take advantage of prospective high prices and hold cattle for spring markets.

Quotations for the various grades of killing steers are as follows:

Prime corn fat steers	$8.75@9.00
Good to choice steers	8.25@8.70
Fair to good steers	7.65@8.20
Common to fair steers	6.00@7.60
Meal fed, choice	7.50@8.25
Meal fed, common to fair	6.00@7.45

Butcher Cattle Slightly Lower.

Prices for butcher cattle have shown about the same movement as steers but now are only slightly lower than two weeks ago. Dry lot offerings are very scarce and are maintained at the highest level this year. Mixed grades sold as high as $8.95, and straight yearling steers up to $9. Some heifers sold at $8.85. Cows sold at $3.25 to $7. Most of the "canners" brought $3.50 to $4.25. Packers are eager for materials that can be used in the canning department and present prices are at the lowest level expected this season. As soon as drouth pressure is relieved few old cows will be offered. Good fat heifers are scarce, as countrymen pay better prices for that class than killers offer. Veal calves are $1.25 higher than the recent low time last week, and $1 lower than two weeks ago.

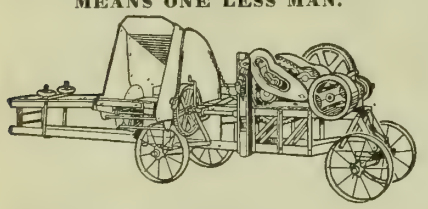
The following quotations are for the various grades of butcher cattle:

Cows—	
Choice	$6.25@7.00
Fair to good	5.00@6.20
Common to fair	4.50@5.00
Canners	3.50@4.45
Heifers—	
Choice fed	$8.25@9.00
Good to choice	7.50@8.25
Plain to fair	6.25@7.40
Common	5.25@6.20
Veal calves	6.00@9.25
Bulls	3.75@6.50

Big Demand for Stockers.

At a movement of 50 cents to $1.25 in prices, and with demand apparently increasing as the price rose, is the main feature of the stocker and feeder market in the past two weeks. Early in August demand had fallen to small proportions, and a run of 30,000 cattle found trade in no position to handle the offerings. Prices broke materially, and the market became panicky. However, the break in prices and hopes of a bargain market caused buyers to flock to Kansas City with the net result that nearly 50,000 stockers and feeders were sent to country points in the past two weeks and prices rose 75c to $1.25 above the low point and to practically the same position they occupied before the break. In the past two days they have weakened again, and larger supplies are expected in the next ten days, unless weather conditions change materially.

The following quotations are for stock and feeding cattle:



Selected feeders	$ 7.65@ 8.00
Good to choice feeders	7.00@ 7.50
Plain to fair feeders	6.25@ 7.00
Selected stockers	7.25@ 7.65
Good to choice stockers	6.75@ 7.20
Plain to fair stockers	5.25@ 6.70
Stock calves	6.25@ 8.00
Stock heifers	4.75@ 6.50
tSock heifers	4.75@ 6.50
Mich cows	35.00@90.00

Drouth Pressure in Hogs.

Farmers held onto their hogs as long as possible, but in the past week pigs and underweights began to move freely. While drouth is destructive to the surplus hog supply, it is not so lasting as for cattle, because a hog surplus can be established in two to three years and cattle cannot overcome the shortage caused by overshipping in a number of years. As a result of the increased movement of hogs at underweight packers found themselves in complete control of the situation and lowered prices rapidly. The drop in prices of good hogs this past week was 30 to 40 cents, and common dry weather offerings and pigs were unevenly lower, mostly 75 cents to $2.25 lower. At the decline the market steadied some, as packers bought freely. Average weight now is about eight pounds less than in July and prices are 75 cents to $2.50 lower than the high point in July. The present movement is clearly at the expense of future supplies and as soon as drouth pressure is relieved prices will bound up again. The pres-

AUTO-FEDAN

(Self Feeding Hay Press.)
MEANS ONE LESS MAN.

Two men can operate this machine. Bale as much as 3 will with any other. Can furnish with 12-horse engine mounted on same frame, direct gear drive, weight only 4,000 lbs. The most compact and nicest machine there is out. Write for catalogue.

A NEW BOOK FOR FARMERS

TRACTION FARMING and TRACTION ENGINEERING

GASOLINE
ALCOHOL
KEROSENE

By JAMES H. STEPHENSON, M. E.
Author of "Farm Engines," "The Young Engineer's Guide," etc.

This new hand-book contains all the latest information of the HOW and WHY of Power Farming.

In Three Parts

PART I. FARM TRACTORS—Full details of construction and operation—Fuels—Lubrication—Ignition—Troubles—All leading makes of tractors described and illustrated.

PART II. Water Supply Systems for Farm Homes—Electric Light for Farm Homes.

PART III. THE SCIENCE of THRESHING—All leading makes fully described and illustrated.

Just the book you need to help you out of all difficulties in connection with modern farm machinery.

12 mo. 330 pages. 151 Illustrations. Cloth.

ent outlook is for short feed and high priced hogs this winter. While the markets are opened to handling stock hogs, the three weeks required to minimize them, makes too long a holding period for handling them profitably. Only a few loads have been shipped from any of the markets back to country.

The following table shows prices for hogs in Kansas City in the past two weeks:

Mon., Aug. 11.	$8.30@8.80—$8.60@8.90
Tuesday	8.10@8.75— 8.50@8.82½
Wednesday ..	8.00@8.65— 8.40@8.82½
Thursday ...	7.80@8.35— 8.40@8.80
Friday	8.00@8.40— 8.30@8.70
Saturday	8.20@8.40— 8.25@8.80

The following quotations are for hogs:

Choice, 250@200 lbs.....	$8.20@8.40
Choice, 200@245 lbs.....	8.25@8.45
Medium weight	8.10@8.45
Light weight	7.50@8.40
Common to fair.....	6.50@8.00
Stags	7.00@8.00
Boars	4.00@6.50
Pigs	4.00@5.00
Bulk of sales.....	8.20@8.40

Sheep Prices Hold Up Well.

The sheep market has felt no ill effect of the drouth as yet. It may get its share when the feeder season begins, but flockmasters in the West and Northwest are in an independent position, owing to continued good grass and big hay crops. The native run is about over, and the big Western movement is due. Prices in the past two weeks have shown comparatively less movement than in any previous similar period since March, and now are about the same as a year ago. Good to choice lambs are quoted at $6.75 to $7.25; yearlings, $4.75 to $5.25; wethers, $4.50 to $5.15; ewes, $4 to $4.75. The few feeding lambs offered thus far this season brought $5.50 to $6.25.

PARALYSIS IN PIGS.

To the American Breeder:—Weakness of the hind quarters is a condition frequently seen in growing pigs. It is a form of paralysis and the exact cause cannot be stated for all cases.

One of the most plausible explanations of paralysis in young pigs is improper feeding. A deficiency of mineral matter, especially lime salts in the diet, is believed to be responsible for the majority of cases. The shortage of lime salts results in the improper development of the bones of the growing pig, and the condition known as "rickets."

On the other hand, the diet may be all right, well balanced and wholesome, and yet the pigs may not be able to assimilate their feed and get the proper nourishment from it. In this case, the fault lies with the digestive organs. Pigs raised in damp quarters may develop weakness of the hind parts, often said to be of a rheumatic nature. In this case, the remedy is self-apparent.

So it is evident that paralysis, rickets, malnutrition and rheumatism are similar conditions as far as symptoms are concerned. The same general line of treatment is indicated in all these conditions. Good, wholesome feed, a well-balanced ration, plenty of fresh air and sunshine, with dry, clean, roomy, well-drained and ventilated pens, are the first requisites.

Then see that the pigs have access to a supply of mineral matter in the form of charcoal, bone meal, crushed limestone, wood ashes, and salt. For medical treatment, tonics are indicated, nux vomica being generally accepted as the best. The bowels should be kept moving freely by laxatives, as constipation is generally present. If treatment is started early, recovery may be expected; but quite often these conditions are allowed to progress too long before receiving proper attention, and then treatment is usually of no avail.—H. Preston Hoskins, Assistant Veterinarian, University Farm, Minn.

How to Stop Hog Losses.

Good Work Done by the Serum Treatment Must be Backed Up by Effectual Quarantining. Public Must be Taught and Made to Observe the Safeguards Against Infection.

There are far more hogs and corn in the United States than in an y other country of the globe. But this great class of live stock commonly known as the "mortgage lifter," has met with a great loss in numbers. In trying to stop this loss many successful experiments have been tried; many mistakes have also been recorded. This is not to be wondered at, for the great disease, known as "hog cholera," has not yet been absolutely diagnosed. The germ which is thought to have caused this great havoc in hog production, has not been isolated. The great loss in the corn belt of late years generally has been attributed to that disease known as "hog cholera," which scientific men contend is a certain class of germ disease.

When the serum treatment for hog cholera was first introduced, it was only a brief preventive. Now, with the double injection, a permanent immunity has been established. There have been some serum manufacturers on the market whose principal mission was to sell regardless of any benefit derived. Since the government has taken steps to supervise all serum plants, confidence in this class of treatment will be greatly strengthened. There are still a lot of men administering these injections, however, that should have some special instruction, and especially in diagnosing. The best posted men in the country are none too proficient on this subject. Every time the serum treatment is used without success, hog owners in that section are going to lose confidence. The 'simultaneous treatment" or double injection, when properly applied, has given good results in many instances, but the serum must be of the proper standard and the injection must be made with care, after a proper diagnosis has been made. Hog cholera serum should not be expected to cure other diseases causing similar symptoms in hogs. Many breeders (for one or another of the causes suggested above), have lost confidence in the simultaneous treatment, but this does not signify that it is a failure.

When the difficulties of treatment are considered, it will be seen that quarantining offers the quickest and surest relief. A preventive is the best and cheapest. Glanders has never caused nearly as much loss to the American farmers as hog cholera. Every one knows that as soon as a horse is discovered that has the glanders he is destroyed. But this is not the case with hog cholera. Many farmers ship their stock to market just as soon as a few hogs have died with cholera symptoms, scattering the infection throughout the stock car, stock yards and other places. It is almost impossible effectively to disinfect all of these, although there are some rules requiring railroads to disinfect stock cars. But the most appalling thing is for farmers and breeders to let the hogs that have died with cholera lie around where other hogs, as well as dogs, buzzards, and crows, have an opportunity to scatter the infection. Every hog that dies under suspicions of disease, should be burned, so that not a trace of the animal would be left. This should be done immediately. The land on which sick stock has been, should be plowed and harrowed repeatedly, giving the sun an opportunity to destroy the remaining infection. That farm should be placed under quarantine just as strict as that adopted in Europe, where the 'Foot and Mouth" disease has been prevalent.

Not until some drastic measures are adopted, either by the states or the government, will this hog cholera subside. This quarantine must carry with it some instructions to the inexperienced. There are many men who do not believe that disease is transmitted through infection. This quarantine should carry with it a penalty, not only of a criminal nature, but so that civil suits might be instigated. This subject has progressed to the point where breeders must protect themselves. This great industry is threatened with destruction. In communities where this disease has existed a considerable length of time, it has become very virulent.

These statements are not made to frighten any one, because the fright stage has passed. Many breeders have lost their entire herds, which represent thousands of dollars. This is all a matter of record. The matter of selling cholera hogs to soap factories and other institutions, must be stopped. This would seem to be a hardship on some, for when a hog dies the owner is naturally anxious to receive something, but would it not be better to burn that animal, even at some expense, than to scatter this infection over the entire country? Not until a satisfactory system of quarantining has been established, and the American farmers are thoroughly posted on this disease and how it is spread, will this great loss cease.

FARMS MOSTLY TO BLAME FOR BAD EGGS.

Every year there is a loss of millions of dollars in bad eggs, the direct result of haphazard methods of production, marketing, and shipping which are now in vogue in many states. The greatest part of this loss is due mainly to ignorance or indifference on the part of the farmer and producer, and only a small part is caused by carelessness on the part of the buyer and shipper.

With a view to determining the causes of the great loss in eggs, the United States Department of Agriculture undertook a thorough investigation of the problem, and in its latest publication on the subject (Bulletin 160, Bureau of Animal Industry) are presented the results of experiments conducted in Kansas to determine what deterioration took place in eggs when retained under typical conditions on the farms, in the country store, and during transportation.

The field chosen for the work was one where the production and marketing of eggs was an important factor, a location where the co-operation of several farmers could be secured, and a town that was far enough from a central collecting point so that the effect of typical transportation conditions could be observed. The eggs were collected at a stated time each day from several farms, and every egg, fertile or infertile, was supposed to be absolutely fresh when entered in the experiments.

The different tests included keeping eggs in dwelling house, in cyclone cave, in nests provided for laying hens, eggs placed under sitting hen, under corncrib, in nest in weeds or underbrush, in nest in straw stack, and in stolen nests for periods from two to seven days.

The tests emphasized the fact that infertile eggs keep better than fertile. One third of the annual loss in eggs is due to "blood rings." A blood ring is caused by the development and subsequent death of the embryo of a fertile egg subjected to heat. No embryo can develop in an infertile egg, no matter how long it may be subjected to heat. Unless cooled at once and kept cool, a fertile egg will spoil in hot weather almost as quickly as raw milk.

Some of the loss due to "rots" and "spots" is caused by contamination in the nest and is largely, if not entirely, preventable.

Among the results of the tests it was found that:

Eggs kept in the cyclone cave proved much better in quality than those kept under other conditions.

Taking the season as a whole, an unheated room in a dwelling is not conductive to good quality in eggs.

During the hot summer months the conditions surrounding the weed nest. the nest in the straw stack, or under the corn crib, and the stolen nest, as well as the keeping of eggs in the house, favor the production of spots, blood rings, and rots.

Infertile eggs, regardless of where they may be kept, are much more re-

HOGS.

When in need of some first class birds to improve your stock or for the coming shows I can fit you out in Buff Orpingtons, Single and Rose Comb R. I. Reds, Partridge Plymouth Rocks, Cornish I. Games, B. B. Red Games, Blue Andaluscans, White Crested, Black Polish S. L. Wyandottes, Black and White Langshans, Partridge Cochins, Barred Plymouth Rocks, White Leghorns, Golden Sebright Buff Cochin and B. T. W. Jap Batams. These birds are all from show winners and high scoring stock. Write me your wants and I will make the price the most interesting stunt, and if not satisfactory when birds arrive, I will refund your money without a grunt.
F. L. LUCE, Weldon, Iowa.

HORSE RANCH FOR SALE AT A BARGAIN.

Owing to illness I am forced to sell my ranch, 640 acres deeded land, 640 acre homestead. Modern five room bungalow; hot and cold running water; furnace and bath. Barn, corrals; blacksmith shop; wind mills; tanks; supply tanks; 8 miles fencing; wagons; buggy; harness; hay tools; farming implements; 40 acres corn; 10 head saddle and work geldings; also 50 head of good brood mares and registered draft stallion. Price, $7,200 if taken at once. Address,

F. LAZY H., HECLA, NEB.

Alfalfa As a Money Maker

Rich alluvial soil is what is wanted for the successful growing of Alfalfa, the king of forage crops. The Red River Valley has this kind of soil in abundance—nothing better anywhere. We can recommend this land to well-to-do farmers who want something really good. Ample rainfall.

A Crop Every Year

Write for free booklets and magazines to the Kansas City Southern Ry., Wm. Nicholson, Immigration Agent, 671 Thayer Building, Kansas City, Mo.

sistant to deterioration than fertile.

Two-thirds of the total loss in fertile and infertile eggs takes place on the farm. The basic factors responsible for this condition are haphazard methods of poultry management on the farm.

The results of all the experimental work point to the fact that the production of the infertile egg is the greatest asset in the attempt to produce high-quality market eggs during hot weather.

To assure a high quality of product and prevent in a large measure the loss now experienced in the value of the country's egg production, producers are urged to observe the following five simple rules:

1. Give the hens clean nests.
2. Gather eggs at least once daily.
3. Keep eggs in a cool, dry place.
4. Market eggs at least twice a week.
5. Kill or sell all mature male birds as soon as the hatching season closes.

TICKS INJURE CATTLE HIDES INTENDED FOR LEATHER

According to figures gathered by one of the veterinary inspectors of the Bureau of Animal Industry, the presence of the tick among the cattle of the south not only lessons the value of the cattle on the hoof, but causes the gradings of hides that have been infested with ticks as No. 4 quality.

The same hide, if free from tick marks, would grade No. 2. The difference in price between these two grades of hides is 3 cents per pound. As the hide of southern steers weighs about 42 pounds, the presence of the tick in the hide causes a loss in the hide alone of more than $1.26 per hide. Government specialists point out that the cost of tick eradication is only about 50 cents per head, so that if the counties make a systematic campaign to eradicate the tick, the increase in value of the hide alone would pay for the cost of tick eradication and leave the farmer a net profit of about 76 cents per hide.

Volume No. 79 of the American Shorthorn Herd Book has just been issued. In this volume are recorded the bulls numbered from 350,001 to 359,000 inclusive, and the cows from 104,001 to 115,000 inclusive. This means that 18,000 Shorthorns are recorded in volume 79. For copies of this volume address Roy G. Groves, Sec'y, Stock Yards Station, Chicago, Ill.

The Wild Cattle of England.

The Famous Race of White Forest Cattle and Its Possible Influence on the Early Shorthorns of the British Isles.

By B. O. Cowan.

In the development of a race of people, it seems strange that their history, even when it becomes authentic, should give such meager information of their agriculture and live stock, since it is upon these that most races of people depend in the earlier stages of their national life. The history of the English people is no exception to this rule, the history of its breeds of live stock being traditional in its beginning and involved in doubt. Since some of the stories relating to the origin of modern breeds of domestic cattle are regarded as apocryphal, it is not surprising that the origin of the wild white cattle is involved in so much doubt and uncertainty; yet enough is known of them both in ancient and modern times to make further study of them interesting.

In B. C. 55, Julius Caesar had brought part of Britain in subjection to Roman rule, and he recorded an opinion as follows: "The multitude of inhabitants was infinite, the edifices most frequent and the number of cattle very great." From the adjective employed to indicate the number of inhabitants conquered, it would seem that the conqueror desired to magnify his skill as a military commander. The cattle of which he spoke were evidently domestic cattle, as the wild white cattle were not so numerous and occupied forests away from the haunts of men, though they had been in the country from a very early date. They were known in many parts of both England and Scotland. In modern times this interesting race of cattle has become extinct, except a few small herds that have been preserved in forest parks of large estates, such as Chartley and Chillingham. The origin of the breed perhaps will never be known, but its uniformity of color, its habits, and the regularity with which it reproduces fixed qualities makes this breed of cattle a fascinating study. With slight occasional variations, these cattle have for unknown centuries preserved their form and color, those in Chillingham Park being white with red ears, while those in the Chartley herd are white with black ears and occasional small black marks about the feet. The red ears so uniform in the Chillingham herd may have resulted, in part at least, from the custom of the keepers for many generations of culling from the breeding herd all bulls showing off colored markings. As a result of this careful selection and the prepotency of these bulls, native cows bred to them produce calves like the sire. The white body with colored ears seems to be the distinctive feature of these cattle both at Chillingham and Chartley, the former having red and the latter black markings about the ears. In this connection an opinion of Chas. Darwin is not inopportune. He says, "Facts show that there is a strong, though not invariable tendency in wild or escaped cattle, under widely different conditions of life, to become white with colored ears."

The cattle of the Chillingham herd have been described as fairly symmetrical with straight lines and short legs, while those at Chartley are coarser and heavier and, as one writer expressed it, more like the improved Longhorns, aside from color. But whether these cattle have descended in an unbroken line from a wild ancestry, or whether they are the produce of domestic cattle escaped to the wilds, as hinted by Mr. Darwin, the wild nature is so bred into them that they cannot be domesticated, except the training begin with calfhood, and only the keepers of the parks where they are confined can acquire even a degree of intimacy with them, though during the winter when feed is scarce in the park they will come into a paddock to get hay put out for their use.

These cattle do not multiply rapidly, the cows rarely producing calves until three to three and one-half years old, and the herd is subject to occasional losses from disease, the persistent fighting of the bulls for mastery and the death of calves from trampling of the older cattle during stampedes caused by sudden fright. Yet in earlier periods of English history they must have been more plentiful and more tractable to man, since a code of laws prepared in Wales during the 10th century provides as a penalty for an injury done the king a fine of 100 cows and a white bull with red ears, and during the reign of King John of England it is recorded that Maude de Brense atoned for some offense committed by her husband by presenting the king one bull and 400 white cows with red ears. The most remarkable characteristic of the Chillingham herd is the white color and red ears and the uniformity with which these are reproduced in the offspring.

The fact that it is difficult to find a white Shorthorn that does not have some red about its ears has given rise to the belief, on the part of some persons, that some of the blood of the wild white cattle of England may have been introduced into Shorthorns during the formative period of the breed. This belief is combated by Allen's "History of Shorthorns" on the ground that the wild white cattle were "high-boned, black-nosed, light of body and long of limb." Mr. Allen does not state that he ever saw these cattle, but his description of them is contradicted by that of Mr. John Storer, the faithful historian of the breed; Mr. John Thornton, live stock auctioneer, and Lord Tankerville, in whose family the Chillingham herd has been owned for many generations. These gentlemen were familiar with these cattle and describe them as being fairly symmetrical, with straight lines and short legs, and white with red ears. The black noses of which Mr. Allen complains of are not found in the Chillingham herd. Whether the belief of this infusion of blood in Shorthorns has any foundation in fact, there is at least ground for an argument. Chillingham Castle, which existed prior to the Norman conquest, was located in Northumberland, the birthplace in part of Shorthorns. In 1714 in the reign of George I, John Aislabie of Studley Royal, was made Chancellor of the Exchequer, and his son married a daughter of Lord Tankerville, owner of the Chillingham Park wild white herd. As these two families were so intimately connected and the Aislabies breeders of Shorthorns, a cross of the two breeds of cattle which they owned is not improbable. Certain pecularities of Shorthorns lend encouragement to the belief.

DEVON CATTLE.

To the American Breeder:—The Devons are one of the oldest, if not the oldest pure cattle breeds of England, and it is said they have the ability, through their purity of blood, to transmit their breed characteristics when crossed on other breeds, through a greater number of generations than any other breed of cattle. There is no breed that combines more desirable characteristics, as they are not only pleasing in appearance to the eye, but are excellent for beef, milk and butter.

Their meat is very fine grained and of superior flavor, and their milk contains sugar and casein in desirable quantities, making a superior quality of milk for table use after it is skimmed.

Devon cattle are very hardy, are great rangers, and possess the quality of fleshing on short pasture, where other breeds are cramped.

Devon cattle have been bred almost since the first settlement of this country, in the New England states, where their sons are yet highly prized as oxen, and still till the mountainous fields of Vermont, New Hampshire, and other Eastern states, together with hauling logs to the saw mill, where it is impossible to use horse teams. These ox teams frequently sell for upward of $300 per yoke.

Devon cattle may be any shade of red, but no white spots are admissible, except that the bush of the tail may be either red, roan or white, and the cows may have some white about the udder, extending forward of the udder, sometimes as far as the navel.

They have long, spreading horns, sloping upward, and they are very active and alert, yet kind and docile under kind treatment. Devon cows are very even, persistent milkers, and almost invariably have good-sized teats and milk easily, and as a dual purpose bovine, is certainly unsurpassed.—Owen L. Fitch, Pike County, Illinois.

BULLS TO HAWAII.

Among the many shipments of pure blood bulls made from Kansas City as a collecting point, one of the recent ones consisted of 50 head consigned to the Hawaiian Islands. Of the 50 head, about half were Herefords, and the others Shorthorns, Angus and Holstein. They were bought from breeders in Missouri, Kansas and Iowa and at Kansas City underwent tests for general health before starting for the far side of the Pacific.

All the cattle are registered and will be used to improve the native herds of the island country. They left Kansas City July 28, in charge of C. Edwin Overly, who has made the trip with several previous consignments.

ABROAD AFTER BELGIANS.

W. H. Bayless of Linn County, Kans., who is one of the pioneers of Belgian horses in the West, has written from New York, where he took the steamer Mauretania, July 23. He was going direct to the heart of the horse country in Belgium to gather up an early autumn importation. We presume that he will land in this country, as is his custom, in time to show his horses at the American Royal.

CATTLE.

GOOD SHORTHORNS.

Practical cattle for both beef and milk. Just the kind the farms of the country need, and with breeding and conformation to make show cattle if you want them. I show my breeding stock successfully, but no stock is ever crowded enough to hurt it.

Pleased to show stock, quote prices and answer inquiries at all times.

C. H. White, Burlington, Kas.

JOHN R. TOMSON, Dover Ks.

My herd of Shorthorns is now at the home farm. Gallant Knight's Heir in service. Several good, strong, fleshy bulls ready for service now. Scotch and Scotch-topped.

SCOTCH SHORTHORN BULLS.

For sale; reds and roans. Baron Douglas 372812 is an extra good, 17 months, low down, red. Also have some good Scotch topped. **L. C. SHEPARD, IRWIN, IOWA.**

HEREFORD BULLS

for sale. Two registered Hereford bulls, 14 and 15 months old. Also pure bred Poland China pigs. Address,

JOHN W. CAROLAN, BOONEVILLE, ARK., ROUTE 3.

COLORADO ANGUS.

R. R. Lucore, Arriba, Colo., breeder of Aberdeen Angus cattle. Stock of both sex for sale. Inspection and correspondence solicited.

THE INAVALE STOCK RANCH.

breeders of full blood and high class Aberdeen Angus cattle.

Sorghum Crops for Silage

Experiments With Dairy Cattle.

By O. E. Reed and J. B. Fitch, Kansas Experiment Station.

Sorghum crops, both the saccharine and non-saccharine, can be used for silage with good results. The corn plant has considerable prestige as a silage crop and it has been more generally used for this purpose than any other crop. In fact, its use has become so general that some of the farmers and stockmen have believed that it was the only crop fit to be used for silage.

Two years ago the Dairy Department of the Kansas Agricultural College planned an experiment to determine the value of sorghum for silage. In parts of Kansas the yield of the sorghum, such as kafir and sweet sorghum, is a great deal larger than that of corn, and some seasons the yield is several times larger per acre. It was thought that if these crops could be made into silage they would be of particular advantage to the farmers and stockmen of western Kansas where they have difficulty in getting a crop of corn. The first sorghum crop put in the silo was the sweet sorghum, which is commonly called cane. Previous experiments with this crop, and the experience of some farmers, has given the general impression that the cane contains too much sugar, and that silage made from it would be very sour and stock would not eat it. Our results that first year show that silage made from the cane did not contain as much acid at any time during the year as did the silage made from corn. This, of course, is quite contrary to the belief heretofore held by many, but it is easily explained after a little thought and investigation. Where cane had been made into silage it had been put up entirely too early. Those who tried it had put it into the silo at the same time that they cut their corn for silage. At this stage of maturity the cane contains entirely too much sap or moisture, and if put up at this time it is certain to result in a sour silage. The cane was not put up until three weeks after the corn silage was made. By this time the cane seed was hard, but the stalk was well filled with sap, yet it did not contain an excess of moisture. The cane used in this experiment was grown on upland soil on the College farm. One-third of the field was drilled and another third was listed in. The remainder of the field was in corn. The drilled cane made 12.5 tons of silage per acre, the listed cane 8 tons, and the corn 5 tons per acre.

In the fall of 1912 one silo was filled with cane, one with kafir, and one with corn. The following yields were obtained this year: Corn, 7.1 tons of silage per acre; cane, 8.2 tons, and kafir, 6 tons. The yield of kafir was not a representative one. The season of 1912 was not a good season for kafir and the early frost cut down the yield considerable. Here, again, we had the same results with the cane as we had previously. It made a good quality of silage, and after analysis the different silages for acidity it was found that the cane silage did not contain as much acid as the corn silage at any time during the winter.

In the first year's experiment, cane silage was compared with corn silage as a feed for dairy cows giving milk. Two lots of four cows were selected from the herd for the experiment. These lots were handled in the following manner: Lot 1 was fed for the first twenty days on corn silage. The second twenty days, (after a period of ten days intervening), they were fed on cane silage, and the third twenty days they were changed back to corn silage. Lot 2 was fed cane silage for the first period, corn silage during the second period, and again changed to cane silage during the third period. It was planned to get a direct comparison of these two feeds by comparing the average of the first and third periods with the second period in each case. The cows gradually decline in milk flow and the average production of the first and third periods would be about equal to the production of the second period. These cows were fed a grain and hay ration in addition to the silage. The hay ration was kept constant and the amount fed was based on what the cows would consume. The grain ration was fed in proportion to the amount of milk produced, and the remainder practically constant during the experiment. The only change, then, in the ration during the experiment was the change made from one kind of silage to the other. The cows were weighed every morning at a stated time in order that we might keep check on the gain or loss in live weight for each individual. The following table gives the results of the experiment:

FIRST TRIAL—1911-1912.

Lot I—4 Cows—20-day Periods.

	Milk	Butter fat	Body Weight
Period I. Corn silage in ration	1337	55.0	4108
Period II. Cane silage in ration	1252	51	4132
Period III. Corn silage in ration	1177	49	4084
Av. 1st and 3rd periods, corn silage	1257	52	4108
2nd period, cane silage	1252	51	4132
Difference.	5	1	24

Lot II—4 Cows—20-day Periods.

Period I. Cane silage in ration	1192	54	4044
Period II. Corn silage in ration	1167	51	3953
Period III. Cane silage in ration	989	46	4020
Av. 1st and 3rd periods, cane silage	1091	51	4032
2nd period, corn silage	1167	51	3953
Difference.	76		79

In studying the table giving results on Lot 1 we find that the cows declined in milk and butter fat production on being changed from the corn to the cane silage. At the same time there was an increase in live weight when the change was made from corn back to cane silage. During the third period after the cows had been changed from the cane back to the corn silage, they lost in live weight. This shows a direct influence that the feeding of the cane silage had on the live weight. A study of the table giving the average of the first and third periods at the time the cows were fed on corn silage, and comparing this with the second period when the cows were receiving cane silage, shows that the cows gained five pounds in milk and one pound of fat on the corn silage. It also shows that the cows when fed cane silage made an increase in body weight of twenty-four pounds. The increase made in milk, fat, and live weight is the total increase made by four cows in twenty days. The increase made in milk and fat production in favor of the corn silage is so small that they do not mean very much. In fact, the increase as shown here is not much more than a variation that would be caused by change from one feed to another, or a change that would be caused by a change of weather or other such variable conditions. The increase of twenty-four pounds of live weight for the lot is a little more than one-fourth of a pound gain per day for the period, which suggests that the cane silage is more fattening than corn silage.

Lot 2 made a similar showing. These animals were fed cane silage during the first period, then changed to corn silage during the second period and received cane silage during the third period. The order of feeding was just the reverse of that in Lot 1. It will be noticed here that the cows did not make a direct increase in milk when changed from the cane silage to the corn silage, but there was a direct decrease in gains then the change was made. The table giving the average production of the first and third periods and comparing it with that of the second period, shows that the corn silage produced more milk and butter fat than the cane silage, and that the cane silage made gains in live weight. The four cows made 76 pounds more milk and a trifle more fat on the corn silage than on the cane. Each cow produced three-fourths of a pound more milk per day on the corn silage than she did on the cane silage. The total increase in the live weight for the four cows for the twenty days was 79 pounds, which is equivalent to one pound gain per day per cow in favor of the cane silage. Here, again, the increase in live weight, when the cows were changed from corn to cane silage, suggests that the cane silage is more fattening than the corn silage.

A SCENE TOO RARE IN CORN BELT PASTURES.

During the winter of 1912-1913 a feeding experiment was conducted with fifteen dairy cows in which the comparison was made of the three crops for silage. The general plan of the experiment was similar to the plan carried out the first year. The fifteen cows were divided into three lots. Lot 1, of six cows, was used to compare kafir silage with corn silage. Lot 2 contained five cows, with which we compared cane with kafir silage, and in Lot 3 the four cows were used to determine the comparative value of corn silage and cane silage. Each lot was fed for three periods of thirty days each, and a ten-day period intervened between the first and second periods and also between the second and third periods, at which time the change in feed was made. The experiment included only the thirty days in each period. The grain and hay ration was kept constant, as described in the other experiment. The only change made was in the kind of silage. The amount of silage was kept constant.

* * * * * *

Results of experiments with Lot 1, in which kafir silage was compared with corn silage, indicate that the corn silage is slightly superior to the silage made of kafir for milk production, but the cows showed a loss in live weight when changed from kafir

LIVE STOCK INSURANCE AT COST

Covering loss by death from all causes.
Reasonable rates. Agents wanted everywhere.

NATIONAL LIVE STOCK INDEMNITY EXCHANGE

HOME OFFICE 204 SCARRITT BLDG., KANSAS CITY, MO.

R. L. HARRIMAN, Bunceton, Mo.

The Fine Horse and Jack Auctioneer of the West

I sell more horses and jacks than all others. Terms always right: work always up to the highest standard.

MARKET HORSES AND FEEDERS.

Horses and mules of all classes bought on commission. Try feeding horses in place of cattle.

HAMILTON HORSE COMPANY, Hamilton, Ill.

For Sale or Trade

For land, cattle or young mules, a registered saddle stallion, a registered trotting stallion, a grade Percheron and three good young jacks. Quitting the business. Priced to sell.

E. M. MITCHELL, Brighton, Mo.

FOR EXCHANGE.

Eighty acres in Greenwood County, improved; 80 acres in Woodson County, improved; 80 acres in Elk County, improved. Any one or all for horses, mules, jacks, stallions or cattle. If you have anything in this line to exchange for land, send us complete description and prices at once. Address THE ALLEN COUNTY INVESTMENT COMPANY, IOLA, KANSAS.

FOR SALE OR TRADE.

Will sell cheap, or trade for good young cattle, my fine registered Percheron stallion; 7 years old; dark gray; weighs 1900 pounds; works in all harness. This is a number 1, good stallion. His fillies are in his way. C. A. FOLTS, Route 1, York, Neb.

WE MAKE CUTS

FROM PHOTOGRAPHS, SUITABLE FOR PRINTING ON POSTERS, BILLS, LETTERHEADS OR IN ANY PAPER.

In this way you can get a cut of your house or barn, or yourself, or of any of your live stock. We also keep on hand the best line of

Stallion and Jack Cuts Ready Made

to be found anywhere in the country—a new line, true to life: the best work: prices low.

Send for sample sheet and subscribers' prices.

N. B.—We do not do any printing. We simply furnish the cuts.

REGISTERED MORGAN HORSES.
My Morgans ars large; 15 to 16 hands and 1050 to 1300 pounds; have clean, heavy bone and possess all of the style and endurance for which the breed is noted.
For Sale—Weanlings to 3-year-olds, by The Admiral 4871 A. M. R., he by Jubilee De Jarnett. Send for catalog. **Richard Sellman, Rochelle, McCulloch County, Texas.**

EXCELSIOR SHETLAND PONY FARM
Registered stock a specialty a limited number for sale. W. H. Fulcomer, Prop., Belleville, Republic Co., Kas.

to corn silage. The increase of 27 pounds in milk production in favor of corn is very slight for the lot, as this is the increase for six cows for thirty days, or less than one-sixth of a pound of milk per cow per day. The kafir silage proved to be more fattening than the corn silage.

* * * * * *

In summing up the work of both trials, the following conclusions may be drawn:

Corn silage is slightly superior as a milk producer to silage made from kafir and cane.

Kafir silage ranks second as a feed for milk cows, as shown by the results of the experiment.

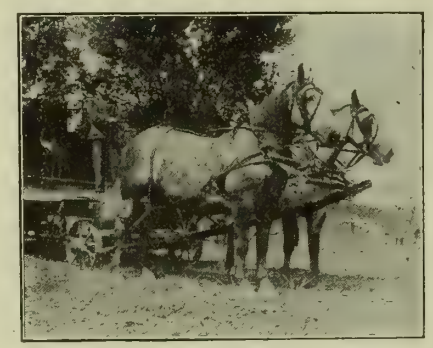
Cane silage ranks third as a milk producer, according to the results here given.

In both trials the cattle seemed to gain in live weight on cane silage more readily than on the silage made from kafir of corn. This fact would indicate that it contained more carbohydriates and sugar, or fattening nutriments, than the other feeds. In this experiment the grain and hay ration was constant and the kind of silage was the only change made in the feeding. It is our opinion that the cane silage would prove the equal, ton for ton, of the corn and kafir silage if the grain ration were changed so that the animal would use the nutriments more economically. This could be done by feeding more protein and less fat-forming nutriments in the grain ration.

Although the kafir and cane silage were shown to be slightly less valuable than corn silage from the experiments just explained, there are other factors that must be considered, namely, yield, and adaptibility to local conditions. Without doubt, the increased yield of cane and kafir per acre will offset the slight increase in feeding value obtained from corn silage. Kafir and cane are drouth-resistant crops and can be grown over a wider territory than corn, and from one-third to one-half more tonnage per acre can be obtained.

It was also noted during the experiment that the majority of the cane seed and a great amount of the kafir seed passed through the animals undigested. This suggests that the nutritive value of these crops as silage is to a certain extent limited to the nutritive value of the stalk and leaves.

The quality of silage obtained from all crops was very good. The kafir silage was perhaps the poorest on account of being immature, when the heavy frost forced an early harvest.



The cows ate the silage with relish. The cane silage seemed to be the most palatable. The silage was stored in wooden stave and in cement silos. It kept equally as good in cement as it did in the wood.

The time of cutting cane and kafir for silage is all-important in making good silage from these crops. These crops should be practically mature, that is, the seed should be mature. At this time the stalk is still filled with sap and will make good silage. If put up too green it will make a sour silage. These crops should be put up before frost if possible, but it is advisable to let the crop stand until after frost instead of putting it up too green. After a heavy frost the crop should be cut and ensiloed immediately. If it dries out too much, add sufficient water to pack well.

A YOUNG JACK'S EDUCATION.

To the American Breeder:—I have been a subscriber to your paper for several years, even before it changed its name. I have read every query and answer from first copy to last, with much interest, and have gained some valuable knowledge. There has been one query for two or three times this year, on which I beg to differ seriously with you. The question is: "How to Raise Jacks." Your answer is: Wean at 6 months old, with filly colt. Never let jack see or smell jennet or mule, and better still, not to see other jacks."

The above is about the substance of your answer. I believe your answer is on the extreme, and calculated to hurt the jack industry, as very few farmers in this section are so situated that they could go by your instructions. If we did we would be compelled to sell every jack colt at weaning time, regardless of how anxious we were to develop him, or regardless of the sacrifice in price that we might have to take at weaning time. If I had more than one, even one dozen jack colts to wean this fall, let me tell your readers what I would do, and I would not expect to develop one spoiled jack. This is from experience and observation. When the time came to wean the colts, about the age that you suggest, I would put all of them together with a filly colt. If I had jennet colts to wean, I would put them in too, all to stay together until

WORKING PERCHERON BROOD MARES AT THE TENNESSEE EXPERIMENT STATION.

next spring. Then I would take the jennet colts out, if any. The jack colt that showed the most development, or the one that begins to "jacky," we might term it, I would put with the filly in a small enclosure until the jack will take up with her, probably bawl when you take her out of sight. Now take jack No. 1; put in stable or small lot by himself—never back with the bunch—then take jack No. 2, and so on, until all have a likiing for the filly. This you can do, even with one lot, and one filly. By taking time about with each colt, you can manage several; one to go with filly at night, one in morning, another in evening, so on, until you have a liking for the rangement up until each one has made one service, which will occur at from 16 to 30 months of age. Of course you do not want a horsing jennet or mule to come and stand around the lot or stable, but you need not be so particular about how many they see over the fence, as there has been too many raised in this section around the same barn with both jennets and mules, and not a day in their lives but what they saw one or both.

Jacks are great habit-forming animals, especially about the ages we have been speaking of. Instead of putting in some secluded spot, with no company except one lone filly, I say bring him and his company out in front, where he will get acquainted with as many things as possible. Teach him to drink out of creek, branch pond, buckets (both wood and tin), and to cross running water, bridges, etc. Change stables; teach him while young, to eat out of box, deep or shallow, trough, etc. His main associates should be horse stock, but let him see and get acquainted with all—sheep, goats, hogs, all fowls, etc. We would have less trouble with old jacks when they have to change localities, if we would, while they are young, keep them from forming one habit. The more correct way would be to help them form more habits.—G. B. Reagon, Bedford County, Tenn.

BARGAINS! **I am cleaning up my stock of Big Jacks and Draft Stallions**
And am making the lowest prices you ever heard of for stock as good.
Just come here, pick out what you want and if you don't buy it won't be the fault of the price.
I don't believe in having any good, serviceable stock left when the season ends, and this is the way I keep from it. Come and see.
W. J. Finley, Higginsville, Mo.

MORE HORSE AND MULE TWINS.

"When P. C. Wade arose last Monday morning he discovered that his live stock had multiplied during the night, the family mare having given birth to twin colts, one of which had been smothered.

"It was not until a number of his neighbors had examined the twins that it was discovered something extraordinary had happened. One of the colts was a perfectly formed mule, while the other was as perfect a specimen of a horse colt."—Bridgeport (Neb.) News-Blade.

In writing the American Breeder concerning the above report, Mr. Wade said that the mare had been left at the breeding barn a month, with instructions to breed her to the jack. A Shetland pony stallion was also kept at the barn, and as the horse colt looked like a Shetland, Mr. Wade surmises that either through mischief or accident the pony got to the mare after the jack had served her. The mule colt was the larger but did not live. The pony colt lived three days.

SEASON OF LONG GESTATION PERIODS?

To the American Breeder:—In reply to an article in your issue of July 20th, from a Colorado subscriber, will say I have known of a mare 12 years old that carried colt a full year and ten days, and have now in my barn a fine Shetland mare six years old that was served but once (July 17, 1912) and still carrying colt, and from general appearances no signs of foaling for a few days at least. I have not heard of a mare in my community but what has carried colt from ten to 30 days over time this year.—An Iowa Subscriber. (July 25, 1913.)

ONE COPY MADE HIM OVER $500.

To the Amercian Breeder:—Through some mistake, I failed to receive my American Breeder of April 20, also the May and June issues. Now as I am anxious to keep a complete file of these papers, I am writing to ask if those copies cannot be sent me at Temple, N. D. I am not farming this year and am not handling any stock of any kind, and do not expect to get back in business for a year of so, but at that, I don't care to miss any of these papers, as one copy of a year ago last spring (the one giving the barren mare treatment) has made me over $500 by now. Not bad for a single issue.—Jay T. Carpenter, McKenzie County, N. D.

A WESTERN BREEDER.

To the American Breeder: I thought that I could get along without the American Breeder, but when it comes to a show down I miss the Breeder very much, as I am interested in the pure breds. I don't think it pays to breed to any kind of grade stock. We have plenty of men who want the best and I have learned to do as you advise, keep just a little bit better stock than the other fellow. I stand my horse, Vainquer, for $8, leap; $12, season; $20 to insure in foal. I have been fighting that "stand and suck" proposition ever since I have been in the horse business and have got it driven out of our registered camp, but the scrubs, they will do anything to get business. I get the best mares and let Mr. Scrub have the rest. I will not breed a mare that has been bred to some other horse, even if the owner was to pay in advance, for there are lots of men that pretend to be stallion men that don't know how. They ask me how I keep my horse in such good shape when I drive him 45 miles a week, besides trying 40 or 50 mares every week. I tell them to take the American Breeder and read up; some will take my advice while others will jerk their heads high and say that those men write for the paper, but when I find that kind of a man I let him go. I have good luck breeding mares with the Carlson Semen Extractor; I use it as an impregnator and all I have ever learned has been by reading and practice. Last year I tried about 130 mares and got about 98, and I think that the man that lets his horse stand in the stall all winter, and have him fat and sleek, and afraid to let him trot, can not get the good colts. I

GOOD JENNETS
For sale: One 5-year-old jennet by Great Eastern 2d, and jennet colt at foot by son of King Giant; price, $300 if taken in 30 days. Also one 6-year-old jennet; registered; 15½ hands; sire Great Eastern 2d; price, $200.
W. W. DOWNING, Hawk Point, Mo.

MAMMOTH JACK
For sale. Having rented my farm, I want to sell my Mammoth jack, 16 hands high, 1200 pounds; black with white points.
W. H. FURLONG, Colgate, N. Dak.

MULES FOR SALE.
7 yearlings; 6 two-year-olds; 11 three-year olds. All have good bone and fair size. Price $2,650.
M. L. FOOTE, Hugo, Colo.

FAIRVIEW JACK AND JENNET FARM
32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address
J. C. HUCKSTEP, Eolia, Pike County, Mo.

PAGE AVENUE JACK AND JENNET FARM.
Fine jacks, from yearlings up, for sale. As good a bunch as anybody has got. Aged jacks fit for herd headers—two of them as good as grow. Visit our barns and see for yourself, and buy the best in the land.
J. R. REYNOLDS & SON, GUTHRIE, MO.

JACKS.
20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns 2 miles from town.

Phil Walker, Moline, Elk County, Kas.

KENTUCKY JACK FARM
Established in 1884.
A fine lot of black Mammoth Kentucky jacks. Big bone and plenty of weight. Will sell at special prices in order to make room for young stock. We sell more jacks to the Western trade than any breeder in Kentucky. Write for prices or come and see me. Guarantee to please our customers.
Joe E. Wright, Junction City, Ky.

Stallion Wanted

Percheron or Belgian, 1900 pounds or better. Must be sound and a foal getter, and priced to sell. Give full description and price first letter.

O. J. BISBEE, **Madelia, Minn.**

Two Percheron Stallions

For sale. They are two-year-olds, registered in Percheron Society of America; one a grandson of Casino. Cheap if sold soon.

W. E. DUSTIN,

Route 1, **Topeka, Kas.**

CLOSING OUT.

For sale cheap, one Percheron stallion, one Clydesdale stallion; also two black jacks. Might trade for horses, cattle or anything I can use.

MARTIN WELAND, **Walford, Iowa.**

EARLY BUYERS SAVE MONEY

and get the best horses. Buy Big Percherons now from my big bunch of registered studs, 2 and 3 years old, yearlings and suckers at breeders' prices.

FRED CHANDLER,

Route 7, **Charlton, Iowa.**

PERCHERONS, BELGIANS AND GERMAN COACH MARES AND STALLIONS

of all ages for sale. I have recently taken over the entire stock of horses formerly owned by the firm of Ives & Bellman and can furnish patrons with first-class breeding stock of the foregoing breeds. Have a fine lot of last spring's and yearling colts, as well as mature stock to select from. Address, **WILL BELLMAN, R. 1. DELAVAN, WIS.**

IMPORTED AND HOME BRED STALLIONS AND MARES.

PERCHERONS, BELGIANS, SHIRES.

The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. **Address Hart Bros., Osceola, Iowa.**

150 STALLIONS.

Imported and home-bred stallions. I guarantee to sell you stallions for less money than any firm in America. Come to a Live Horse Market and see all draft breeds. Reference, any Bank in Creston. **A. Latimer Wilson, Creston, Iowa.**

PERCHERONS.

Imported and home bred stallions and mares, from $200 to $900 each. **H. Redenius, Rushmore, Nobles County, Minn.**

CLYDESDALE HORSES

Stallions and mares of all ages for sale.

Also Shorthorn Cattle.

W. A. DeMerritt

Route 2, Plainfield, Ill.

have heard of but three of my colts dying this season.—L. W. Clark, Idaho county, Idaho.

THE 1912 "YEARBOOK."

The nineteenth volume of the U. S. Department of Agriculture Yearbook has been printed. The edition will as usual be distributed by Senators, Representatives and Delegates in Congress as the Department's allotment is reserved for its official correspondents and others rendering valuable voluntary service.

The previous volumes, aggregating 9,000,000 copies, have been thus distributed and those who received copies, knowing their value, will doubtless be expecting the new volume, which contains 781 pages, 60 halftone plates, 10 lithographic plates, and 19 text figures.

QUESTIONS AND ANSWERS

SHY BREEDING STALLION — I bought a horse last December and he is not settling his mares as he ought to. I found out a few days ago that he is a masturbator. He is an extra good horse and is in good shape, and an extra good server. His semen is thick and can pick it up with a stick and it will hang together. Is there any cure for it? If so, what can be done? Do you think he will ever be sure again? He is ten years old.—Iowa subscriber.

REPLY—This stallion is not very liable to be a very sure horse. Masterbation in a stallion this age is difficult to correct. You might blister the head of the penis with a light blister and repeat it again in three or four weeks. Retire him from service this fall. This sometimes gives good results. It is not advisable to long maintain a sire that is liable to be doubtful.

COLLECTING FOR TWINS—I bred a mare and she has a pair of twin mules. Can I collect for both mules or just one? My terms are $15 to insure a colt to stand and suck.—Nebraska Subscriber.

REPLY—You could probably collect for both colts in this case, but it is so rare that we do not think it advisable to force collection. If both colts grow and develop properly the owner of the mare should be willing to pay for both colts. One good colt is usually considered better than twins. Very often one or both are either small or deficient.

STALLION ROLLS — Please advise how to keep a stallion from rolling in his stall. Have nailed 4x4 pieces on his surcingle, but to no purpose. He is covered with gold foil" every morning. —Colorado Subscriber.

REPLY—It is difficult to keep a stallion from rolling in a stall. We do not know of any successful plan where an animal is confined in a very small enclosure. If this animal had a lot to run in where he could have exercise and an opportunity to roll outside, you would be relieved of this difficulty. Spade up a corner of the lot so that it will be nice and soft. This will tempt him to do his rolling there. You might get the same results by leading him out to a particular spot where he could roll once or twice a day. If you will keep this horse clean and well curried, he will not be as liable to roll in the barn.

MONTANA STALLION LAW—Can you tell me if there is a stallion registration board in Montana, and where? —South Dakota Subscriber.

REPLY—Write to the secretary of the Montana Stallion Registration Board at Bozeman, Montana, for full particulars concerning stallion registration in that state.

REGISTERING A FRENCH DRAFT HORSE—I want to ask if I could have a colt registered in the French society, or any other society. His sire is an imported French Draft horse. His dam is a Percheron registered in the Percheron Society of America.—Kansas Subscriber.

REPLY—Write to C. E. Stubbs, Fairfield, Iowa, Secy. of the National French Draft Association, for application blanks and instructions, stating the case to him fully, giving the numbers of both animals. Also write to Wayne Dinsmore, Secy. of the Percheron Society of America, at Chicago, Ill., about this French Draft Stallion. He may also be registered in the Percheron Society of America. In that case the colt may be registered with that association. A Percheron may be registered in the French Draft Association, but an animal that meets the requirements of the French Draft Association might not be registerable in the Percheron Society of America.

SHOULD STALLION OWNER PAY DAMAGES FOR WRONG ENTRY?

To the American Breeder:—I was talking with Mr. Morrison, another stallion owner, today in regard to a damage suit tried here in county court against another stallioner for damages in his making the wrong entry, the mare dying in a short time. Judgment of $155 rendered by the judge, but he gave bond to the district court. I wanted to see it tried out; I did not think his lawyer had much pluck, and I told the man I would furnish another lawyer to help in the suit, but he backed down and did not try it. This man advertised "care taken to prevent accidents, and would not be responsible should they occur." Now it seems to me that if a man reads that ad and then takes his mare into the yard to breed, he agrees to those terms and cannot collect if a damage is done, unless by neglect. Now as your valuable paper reaches more horse owners than any other printed, we would like to know if there was ever a suit of this kind, and the results, or the opinion of others. It might put the horse men on guard and show how to advertise, and the care to take. It does not look fair to me to risk a $1,200, $1,500 or $2,000 horse against a $100 mare and take the chances both ways.—N. De Mott, Scotts Bluff County, Neb.

WHITE OAK STOCK FARM

American bred Percheron Stallions and Mares.

The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to **D. Augstin, Carlock, Ill. R. F. D. No. 2.**

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Illinois.

THE VETERINARIAN.

The time was when the farrier was "One who shoes horses; a veterinary surgeon.—Webster."

The advance of the veterinary profession has been phenomenal. Only a few of the old-time "farriers" or "hoss" doctors remain. The services of educated veterinarians are in demand as never before. Formerly the veterinarians' work was confined to treating animals for disease, now the scope of this profession embraces the control of animal contagiums and guarding the public health in pure food inspection and other sanitary lines.

The standards in veterinary education are higher now than were the standards in human medicine ten years ago.

There are splendid opportunities in veterinary lines for young men of character, who have been trained in one of the best veterinary colleges.

Food inspection is destined to soon be a regular thing in cities of the first class and second class, and the veterinarian is the only man especially trained for this work. The control of animal diseases is demanding more and better men. There is a call for specialists in bacteriology, pathology; for practitioners in places where they have none, for veterinarians in the army and other lines.

Young men will do well to think of this profession before they decide upon their vocation.—Colorado College of Agriculture.

TREATMENT FOR CROOKED COLT.

To the American Breeder:—I notice an inquiry for treatment of crooked colt. From many years' experience I find that a strong but light steel splint shaped to the leg and bound on with tar-soaked bandages, is the best, and always successful unless there is malformation too great. I also find that an orphan colt can be transferred to a mare or jennett that is suckling a yearling. Take the yearling away, hobble the mare behind, and put a muzzle on her. We use a muzzle we had for a crib biter. This allows the mare to eat and yet she can't bite the strange colt. In a few days she will think as much of it as her own. We have had two cases this spring, one, a mule, we put on a jennett, and the other, a fine young mare, lost her colt, so we took the colt from an old, thin mare, and gave it to the young one. Two years ago we had a young mare that made such a fuss over a dead colt that we gave her another, and she adopted it in a few minutes.—Stanley Turner, Tom Green County, Texas.

CARRIED COLT YEAR AND 24 DAYS.

To the American Breeder:—Replying to the inquiry of "Colorado Subscriber," in your July 30th issue, I would respectfully submit the following, regarding the length of pregnancy. On May 23, 1912, Mr. G. H. Grunden, of this city, bred a roan mare to my imported Hackney stallion, and this mare was never even retried to know if she had settled. This mare was one of a team that was continually in use, as the owner only had the two mares, therefore she had no possible chance to be bred elsewhere. On June 17th, just past, this mare foaled a nice, straight filly foal, having carried same 12 months and 24 days. Mr. Grunden made a memoranda of the date of breeding, which exactly corresponds with my own.—Owen L. Fitch, Pike County, Ill.

Live Stock Organizations

Other Than Record Associations

Scattered over this country are hundreds of organizations formed by breeders of pure bred live stock, for promoting the welfare of their favorite breeds, and conducted independently of the record associations.

These vary all the way from organizations covering one to several states, down to county organizations and neighborhood clubs. Where they have an active membership, with good men in the offices they are doing a world of good. They form units for concerted action in presenting the stock man's side of many a public question; they encourage fairs and other educational work calculated to increase interest in improved live stock generally, and the breed in question particularly. In the case of many the members co-operate with each other in the holding of public sales of breeding stock, and sometimes in the securing of better breeding stock for a neighborhood that it would be likely to secure through individual effort.

We recently asked every secretary of a record association in the United States to furnish us a list of such organizations devoted to the interest of his particular breed. We explained that we wanted to publish the list, and in other ways aid in encouraging the formation of still more societies of the sort. A few secretaries furnished us good lists of societies. Some seem not to have given much attention to this important means of serving the breeders who support their record. We know that these state and local organizations can do and are doing a good work, and now we ask our readers—every reader—to send us the names of any such breed organization which we do not have. Look over the list that follows, and if you know of a district, or county or state association for promoting the interest of any improved breed of live stock, send us its name, and also the name and address of its secretary.

FIELD NOTES

Read the ad of Hamilton Horse Company of Hamilton, Ill., in this issue. They buy horses and mules of all classes on commission.

Any one having land, cattle or mules to trade for a saddle stallion, trotting stallion, grade Percheron and three young jacks, should read the ad in this issue of E. M. Mitchell, Brighton, Mo.

Martin Weland of Walford, Iowa, is closing out and has a Percheron stallion, Clydesdale stallion and two black jacks that he will sell cheap, or trade for horses, cattle, etc Read his ad.

Don't fail to read the ad in this issue of F. L. Luce, Weldon, Iowa. He is advertising all kinds of chickens for sale.

The Allen County Investment Co., of Iola, Kans., have several farms that they would like to exchange for horses, mules, jacks or cattle. Don't fail to read the ad if at all interested.

A big Mammoth jack is advertised for sale in this issue by W. H. Furlong, Colgate, N. Dak.

Absorbine does not blister or remove the hair and horse can be used. $2.00 a bottle at druggists or delivered. W. F. Young, P. D. F., 388 Temple St., Springfield, Mass.

A valuable bulldog is advertised in this issue by Mrs. Woodhouse of Little Baddow, Essex, England. Look up description and price.

O. J. Bisbee, Madelia, Minn., wants a Percheron or Belgian stallion. His ad. tells what kind.

Jennets are money makers. W. W. Downing of Hawk Point, Mo., offers two in this issue. See ad. for prices and descriptions.

Two young Percheron stallions are advertised by W. E. Dustin of Topeka, Kas. See his offer for a quick sale.

Write Secretary A. L. Sponsler, Hutchinson, Kas., for premium list and information for the official Kansas State Fair, the fair that from its beginning has been the biggest thing in the state.

Chester White boards and gilts are advertised for sale by E. J. Brouhard. Colo, Ia.

Here is the way the Auto-Fedan Hay Press (advertisers in the American Breeder), works, as told in the following letter received at the factory last month: "Auto-Fedan H. P. Co., Kansas City, Mo. We used five men in baling 20 tons a day, two pitchers, tyer, bale bucker and man to run buck rake We baled 337 bales in 5 hours and 20 minutes, and made one move. Bales weighed 78 pounds. Run as high as 78 bales an hour.—J. D. Simpson, Bibson, Okla."

WATER CAUSED THE LUMP.

A poor sailor, almost ruined by drink, was induced to sign the pledge for a year. When the year was out, he went and renewed it for life. He had just received his wages, and had the money in a bag in his inside pocket, when he met the tavernkeeper at whose house he used to drink.

"Well, old fellow," said the tavernkeeper, "how do you do?"

"Pretty well," said the sailor, "only I've got a hard lump here on my side."

"Ah!" said the other, "it's cold water does that; if you'd drink some good liquor it would soon take the lump away."

"But," said the sailor, "I have just renewed the pledge for life, and I can't do it."

"Then, mind what I say," said the innkeeper, "that lump will go on increasing, and very likely before another year you'll have one on the other side."

"I hope so," said the sailor, taking out his bag and shaking it. "It's money."

WESTERN POISON IVY OR POISON OAK.

This is the only plant in the Rocky Mountain region that is poisonous to the touch. It is now coming into leaf on the plains and in the foothills. It usually grows in rather moist, shaded situations or among rocks. The plant is a member of the Sumac family, to which belong our common Sumac and Skunk-bush. The latter two are not poisonous, however. Poison Ivy or Poison Oak is a low shrub, one to two feet high. Unlike the eastern Poison Ivy, it does not climb or creep. The leaflets come off in threes and when young are folded along the midrib and quite frequently are tinged with purple or dark red.

The small yellowish green flowers occur in clusters in the axils of the leaves. The fruit is globular, berry like, shining white, and often persistent on the plant during the winter.

Many persons are easily poisoned by this plant. Others may touch it without any ill effects. The common remedy for it is to wash the skin with sugar of lead.—W. W. Robbins, Colorado Experiment College, Fort Collins, Colo.

SOURCE OF JOINT AND BONE TUBERCULOSIS.

To the American Breeder:—In a recent report on the relative prevalence of human and bovine tubercle germs in bone and joint tuberculosis of children, there are included 70 patients, each one studied critically. All were children under twelve years of age with the exception of three. Of the 70 cases of bone and joint tuberculosis, the bovine variety of the germ was present in 41 cases and the human in 26. Both varieties were found in three cases. Where there were histories of tuberculosis in the families, 71 per cent of the cases were due to the human type. Where there was no family history, only 17 per cent were due to the human type and about 82 per cent to germs of the so-called bovine type.—M. H. Reynolds, Veterinarian, University Farm, Minnesota.

POSSIBLE CHINCH BUG REMEDY.

The department of entomology at the Kansas Agricultural College has discovered what entomologists long have sought—an insect which destroys chinch bugs. This insect makes a business of destroying chinch bug eggs by laying its own eggs inside those of the chinch bug. The parasite has been found in every wheat and corn field examined near Manhattan. Of 3101 chinch bug eggs collected between April 28 and June 10, 21 per cent were destroyed by the parasite. Of 116 eggs collected at Crawford, Kas., 16 per cent were prasitized.

THE RIGHT WAY

IN ALL CASES OF DISTEMPER, PINKEYE, INFLUENZA, COLDS, ETC., of all Horses, Jacks, Mules, Brood Mares, Colts, Stallions, is to

SPOHN THEM

On their tongues or in the feed put Spohn's Liquid Compound. Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the disease germs. It wards off the trouble no matter how they are "exposed." Absolutely free from anything injurious. A child can safely take it

50 cents and $1.00; $5.00 and $10.00 the dozen. Sold by druggists, harness dealers, or sent, express paid, by the manufacturers.

Special Agents Wanted.

SPOHN MEDICAL CO.,

Chemists and Bacteriologists,

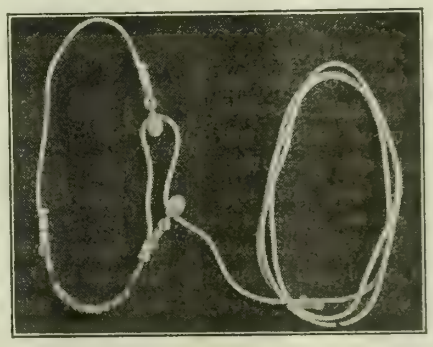
Box 834. Goshen, Ind., U. S. A.

Jack Sores Cured

By Using Jack Sorine. Sold With a Cash Guarantee.

O. P. WILSON SERUM CO., Kansas City, Mo.

Enclosed find my check for $5 for a package of your "Jacksorine" for jack sores. This is for a neighbor and shows on its face that your salve is doing my old jack's leg some good.



June 5, 1913. W. H. HAYS, Bloomfield, Ky.

We guarantee Jack Sorine to cure any sore on the legs of a jack or stallion, no matter how long it has been sore or what caused it. You know we have a good$\frac{1}{8}$, reliable remedy or we could not guarantee it to cure all sores on the legs of stallions and jacks, without any restrictions. It is put up in a substantial box and sent promptly by mail. It is a paste and applied with a small brush.

Send money by bank draft or P. O. money order. Price $5.00.

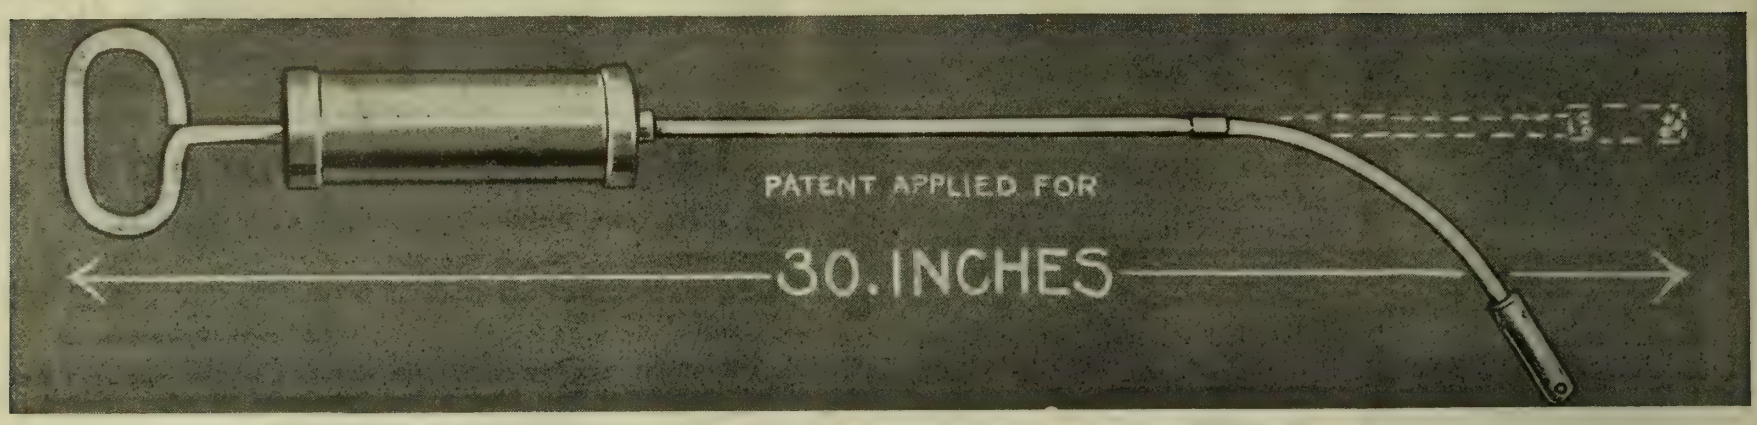
O. P. Wilson & Co., 3754 Wayne Avenue, Kansas City, Mo.

"CONQUEROR" STALLION BRIDLE

GUARANTEED TO HOLD ANY STALLION OR JACK.

This bridle is made of especially selected material, absolutely the best on the market.

Can be adjusted to fit any size head and for either hard or tender mouths.



Just the thing for breaking runaways or kickers.

Never tie an animal with this bridle. If he got to pulling he could split his head.

We prepay the postage or express charges and sell these bridles at **$2.50 each.**

KANSAS CITY IMPREGNATOR CO., 12th & Central Sts., Kansas City, Mo.

BREEDING OUTFIT AT COST

THE IMPROVED CARLSON SEMEN EXTRACTOR AND CAPSULE SYRINGE

This extractor has been improved so that it is much easier to use. The proper temperature can easily be maintained. Anyone should have good results with this instrument by following the directions carefully. This is the only instrument made that has been successfully used for getting the semen from the uterus. We believe this instrument with its improvements will make it possible for any ordinary breeder to use the capsule system successfully. It has a soft metallic point that will stand bending a thousand times. All necessary directions will be sent with the instrument.

Pointed Breeding Capsules

We have the only capsules made especially for horse breeding Some capsules do not dissolve, leaving a foreign substance in the uterus which will prevent conception. Other capsules are too flimsy to use for this purpose. You cannot make any mistake by buying capsules from us as we only have one kind. We have them boxed with 100 in each box. The box is tight so they will be clean. These capsules are properly baked and all bacteria killed before they are mailed. Always keep the lid on the box when not in use.

Price per box (100), $1.50.

Bulb Impregnator

This is the best bulb impregnator on the market. Some dealers sell for $5 and $6.

Price, $2.00.

Veterinary Thermometers

This thermometer is recognized and used by the leading veterinarians for taking the temperature of animals. It has a metal case which insures it against breaking and will last a life-time. It has a small chain with pin in it that may be fastened to the vest pocket and carried with safety.

Price, $1.25.

Thermometer

Tested and used for keeping water at the right temperature.

Price, $1.00.

SPECIAL OFFER

¶ Many breeders are planning to buy a capsule breeding outfit next spring. It will be better for all such to make a beginning this fall. Conditions are more favorable and the opportunity to get some actual experience before the heavier spring season begins, is invaluable. To encourage every breeder to take this step now we make the following special offer:

¶ One Improved Carlson Semen Extractor with the New Point Protector, attached, and one box of 50 Pointed Breeding Capsules, all for $5.00.

Microscopes

For use in testing the semen of stallions or jacks. Magnifies 500 times and is used by veterinarians and physicians. Price $35.00. Boxed in fine case. These instruments are of great value in the breeding business. Through them you can see for yourself and show your mare owner the live spermatozoa of your sire.

Curved Metal Impregnator

This instrument is sold by other dealers for from $5 to $6. It is nickel plated, about 22 inches long, with a glass tube in it.

Price, $4.00.

Breeders' Bags

Three sizes, small, medium and large. Stallions weighing 1,200 or 1,600 pounds usually require a medium size. These bags are guaranteed not to tear from any cause before March 1, 1914. If they do tear before that time return the top part with our stamp on it and 35 cents in cash and we will send you a new bag.

Price each, $1.00.

Directions for Ordering

Send money orders or draft as exchange is always charged on personal checks. Always name your express office as well as your post office address in order to insure prompt delivery.

POSTAGE AND EXPRESS PAID ON ALL ORDERS.

VOLUME 6. KANSAS CITY, SEPTEMBER 5, 1913. NUMBER 16.

Judging the Age of the Horse By Its Teeth

The age of the horse is determined largely by the appearance of the animal's teeth.

In judging age the incisor, or front teeth, are the ones usually inspected. In looking at the incisor teeth from a front view it will be observed that they are not of uniform width on their exposed part but that they grow narrower as they approach the gum line. If it were possible to trace them to the end of the fang it would be found that the teeth terminates in a rather blunt point, so that the measurement from a front view is much greater where the tooth meets the one above or below, as the case may be, than it is at the end of the fang.

A view of the tooth may be taken from the side and it will be observed that it is slightly wider at the gum line than at the exposed end. This tendency for the tooth to grow wider from a side or lateral view would be more appreciated could the entire tooth be seen. To fully understand the outline, shape, and general make-up of the incisor teeth, we would advise anyone following these lessons to secure the teeth of some dead young animal for study.

Keeping in mind that the teeth become worn through the process of grasping and masticating food, and that the wear is compensated by the tooth growing out of its socket to replace the wear constantly taking place, one can see from what has been said above that the incisor teeth will in the course of time become altered in shape as viewed from their contact surfaces (that part which strikes against the tooth above). The lower incisor teeth afford the best index to a horse's age and are the ones most often made use of in judging age. On the exposed ends of these teeth may be seen in young horses certain dark depressions called cups, These cups are open spaces that are not ordinarily filled with tooth substance but contain foreign material, such as dirt. In the average horse's tooth these cavities or cups extend sufficiently far into the depths of the tooth that it requires about three years of wear to fully efface them. This will be explained more in detail when we discuss the changes that take place from year to year after the colt has received his full number of permanent incisor teeth. A close inspection will reveal a ring of enamel encircling the outside of the tooth. It is recognized by its hard, white appearance.

Within the enamel is a substance more yellow which is the dentine. Still farther within is a second ring of enamel and still within this is the open space or cup.

The incisor teeth are named from their relation to one another. For instance, the two that occupy the position just each side of the middle line are called the centrals. The two just outside of the centrals are called the laterals. The two farthest from the middle line are called the corners. There are 12 incisor teeth in the horse, six of which are imbedded in the upper and six in the lower jaws. All of the incisor teeth of the colt are temporary teeth and are replaced, as the jaw enlarges, at certain quite definite ages. Temporary teeth differ in appearance from permanent ones, the chief distinguishing feature being that they are whiter in appearance, which is responsible for them sometimes being alluded to as "milk teeth." They also have a well defined neck or construction at the gum line and are smaller than the permanents.

The temporary central incisor teeth of the colt are usually present at birth or very shortly thereafter. It will be noticed that the front margin of all incisor teeth presents itself first when erupted.

The laterals usually present themselves at from four to six weeks after birth and the corners at about seven months. It requires time for the jaw bone to develop sufficient space to accommodate the row of incisors which is responsible for the delay in the eruption of the corners.

The same statement applies to the molars or back teeth. There is only room for three on each side, both above and below at birth, and they are present at that time. These molars are temporary and are shed and replaced by permanent ones at later periods.

A colt then has 12 incisors and 12 molar teeth, making 24 in all. Before he reaches five years of age all of these must be replaced by permanent teeth, and 12 additional molars and four canines (in the male) erupt, making 40 teeth in a full mouthed horse. It will be appreciated that these several changes have an influence on the general thrift and welfare of the colt during his period of growth and development.

The incisor teeth are replaced in the order of their primary eruption. The central pair are replaced by the permanent ones at two and one-half years, the latter being up and in wear at three years. There should be no difficulty in distinguishing between temporary and permanent teeth for the permanent appear much larger and the gum does not extend so near the contact end as the adjacent temporary. The laterals are replaced at three and one-half years and the oncoming permanents are up and in wear at four years. The corners give way at four and one-half years and the anterior margin of the permanents contact the ones above at five years. It will be seen that at five years the colt has experienced a change that gives him a full mouth and he is entitled to the name of a horse. The changes that take place in the way of replacement are so regular that it should not prove difficult for any person to determine quite accurately the age of an animal up to five years. Perhaps the most puzzling period would be between one and two years, for there are no changes in the incisor teeth during that interval.

A little practice in judging the amount of wear that has taken place, as well as an inspection of the molars, will usually decide any doubtful point.

During the period of change in the incisor teeth, there are many important developments taking place in the molar arcades. The fourth molar is erupted as a permanent tooth at about ten months, and is usually in wear at a year. The fourth molar may be said to be the oldest tooth in a horse's head, being actively concerned in mastication from the time the colt is one year old. It also is of poor quality, compared with its fellows which is no doubt partly due to its early development. The jaw enlarges sufficiently to accommodate the fifth molar at about two years and it is up and in wear at two and one-half.

The sixth molar may appear at any time between three and one-half and four and one-half years and is quite tardy in its progress, due quite likely to the hardness and resistance the jaw bone offers.

The first and second temporary molars are shed at about two and one-half years, the permanents being in wear at three years. The replacement of the second molar ordinarily is about three months later than the first. The third temporary molar may be expelled at from three to three and one-half years, and like the sixth it is tardy in growing into active mastication on account of the hardness of the jaw.

The canines are present in the male but are sometimes found in the female. They make their appearance at from four to five years and perhaps cause more suffering on the part of the animal during eruption than all other teeth combined. Erupted at a time when the bony structures are becoming dense, considerable resistance is offered to their progress. Cases have been noted where animals had reached the age of seven and eight years before the canines had come into view. The sixth molar sometimes causes an extension of inflammation to the region of the throat giving rise to a chronic cough.

Whenever three and four year olds have such cough the region of the sixth molar should be examined and the state of this tooth become known.

From five years on, the matter of determining the age as shown by the teeth is not so easy. It has been stated that it takes about three years to efface the cup in the lower incisor teeth. That being true and remembering that the central incisors come into wear at three years, the cup should disappear at six years, which usually takes place.

There may be in some cases slight black spots remaining in the centrals at six, but this is governed in a measure by the quality of the teeth, the depth of the cup (for they are not all exactly the same) and the manner in which the horse is kept. Grazing on short pasture or sandy sods will necessarily wear the teeth down more rapidly than feeding an animal from the box and manger. In the six year old it will be observed that the posterior margin of the corner incisor is up and in wear, which is usually not true of the five year old.

The seven year old will show only a very small cup in the laterals with a smooth surface on the centrals.

The eight year old shows a fairly deep depression in the corners, the corners wearing down more tardily than their fellows. At nine years even this small cup disappears and the horse has a smooth mouth. From this period on one can only tell the approximate age of a horse, and one judges largely by the alteration that takes place in the shape of the table or contact surface.

Keeping in mind the statement made early in the lesson concerning the effect wear has in modifying the appearance of the contact surface, one can readily see that in the course of a few years' wear the measurement will grow less laterly and wider from anterior to posterior. The tooth inclines to assume a rounder form and in extreme old age even becomes triangular. At the same time the teeth incline to assume a line more in the direction of the jaw itself. By familiarizing one's self with these two changes, a person can make a fairly accurate estimate of a horse's age up to 20 years.

While the general principles have been outlined for judging the ages of horses by their teeth, yet there are many exceptions to the rules given. The matter of breed and care exert a great influence. Early maturity of body influences the early development of the teeth so that where colts are forced by high feeding there must be due allowance made. Again the reverse is true in the starved or late maturing types.

Unscrupulous dealers often attempt to restore the young appearance of the teeth of aging horses by a process called bishoping. This consists of chiseling out or deepening the places where the cups were and then staining the depression with some chemical. Such practices can only fool those who have given no study to the subject, for the shape of the table surface will reveal the attempted fraud. Attemps are sometimes made to have a four year old take on the appearance of a five year old in order to make the animal more salable. This is done by extracting the temporary corner incisors which will have the effect of causing the permanents to erupt prematurely. The condition of the sixth molar and canines afford the best evidence for the detection of the attempted fraud.

MAKE A NOTE OF THIS RATION.

The Iowa station has found that a small amount of oil meal or cotton seed meal added to corn and oats improves and cheapens the ration for work horses. A mixture of 77 pounds shelled corn, 15 pounds oats and 8 pounds oil meal gave excellent results. Cotton seed meal gave somewhat better results than oil meal and the ration was a little cheaper in the proportion of 79 pounds corn, 15 pounds oats and 6 pounds oil meal.

KANSAS AND NEBRASKA HORSE DISEASE.

August 20, 1912, this paper made a report of the mysterious horse plague. At that time Dr. A. T. Kinsley diagnosed this disease for our readers and suggested cautions to observe. His report has been substantiated by the leading veterinarians of the country. Following close upon his diagnosis many other explanations and theories were named but in the final round-up his early announcement was the one that stood the test.

Horse owners in the Southwest have been watching closely for a recurrence of this disease. Up to this date we have not received any reports that would indicate any danger in this direction. It would be very easy to create much unrest among residents of these states at this particular time. Practically every horse that is taken sick is watched closely for the symptoms displayed by this disease. A great loss was sustained. The best posted men of the country do not yet know how to treat these animals to insure recovery. Competent veterinarians have made mistakes in this direction honestly, but a very large number of unscrupulous individuals were loose in the land, many of whom had no regard for either man or beast. Through excitement many animals were destroyed; others were hastened to the bone yard.

Whatever caused the disease there is one lesson to be learned from the horses shipped to other parts of the country. Most of these lived. It is quite likely that if another epidemic should be started that a majority of the valuable animals would be shipped to other sections of the country. But it is not likely that another visitation of this kind will occur for some years, at least, as it was the accompaniment last year of very unusual conditions.

AGE OF A HORSE.

Every individual that is interested in horses should be able to tell something about the age of horses. The article on page 3 should be of much service in this direction. We hope our readers will preserve that article and study it closely. One of the objects in preparing such an article at this time was to help those who expect to engage in the horse feeding business. No horse dealer can expect to have good results without being able to tell the age of horses. This is especially true where horses are purchased from those who might change the teeth. It is a fact that many men engaged in buying and selling horses cannot tell the age of a horse or even make a good guess at it. Such men must depend entirely on the honesty of those having stock for sale, which while safe in many cases, is sometimes risky, and is always poor business. Such individuals could not do better than to take that particular article and study it in connection with such horses as may be convenient, in fact, with several horses a day for a considerable length of time. It would prove time well spent.

There are also a lot of experts who have been handling horses for a great many years that can learn something from that particular article. When an animal is purchased the age of which has been misrepresented, it frequently means a great loss of money. Such articles should be read closely and filed away; or, better still, study them closely and get the contents well founded in one's mind so that this information can be used. Too many of our readers are reading these articles for entertainment only.

DRY WEATHER LESSONS.

In some sections of the south and west the experience with the past summer's heat and drouth will be a very dear lesson. But as one individual has put it, even with the great crop loss sustained, it may be a blessing in disguise for the farmers. He further stated that practically every quarter section of land in the south and west had more or less land on it that would grow alfalfa. Practically every vicinity in the dry districts has some alfalfa. Those who did not have alfalfa have been especially impressed with the fact that this crop is needed for a permanent and more successful agriculture.

A few questions asked of successful alfalfa growers might be worth much to others who wish to make a start in alfalfa production. A visit to an alfalfa field during the dryest time will usually convince the average farmer that it is a mighty good crop to grow, or at least one of the crops to encourage. When all other plants have withered this crop will usually be in fair condition if properly put in and the ground is suitable for its growth.

If you have a small field already thoroughly prepared it is not too late to sow a piece of alfalfa yet in many localities. In some sections land can be found without much crop on it that can be converted into alfalfa land very profitably.

Every live stock breeder, especially, should study the alfalfa proposition for both good and bad years. It is excellent feed for growing animals. There are other crops that stand the drouth fairly well in ordinary dry years. In sections where these drouths have appeared the residents must expect them to come up again. A part of the farm might well be planted each year to some of these crops.

The silo has also been introduced to some breeders who heretofore never have paid much attention to providing against short crops. A good silo is an excellent investment for the average farmer, who keeps stock enough to consume its contents, and better still for those who have a good number of live stock. The water problem reminds one of the individual who had no roof on his house; when it rained he could not put it on, and when it did not rain he did not need it. But this is a more serious condition. Without stock water a stock farm has little value. Some may think that it is easy to write about these things but more difficult to put into practice, which is all true. There are some sections where it seems difficult to have a satisfactory water supply in extreme dry times, but in many of the sections where water is very scarce at the present time there could be an abundance of water on every farm. In most of the hard pan country deep wells, supplying water of a good quality, are not easily found. But in these sections it should be possible to excavate a hole in the ground deep enough to have an abundance of water for an emergency. Hard pan soil holds water as well as a jug, except for the evaporation. If the space is deep and not too much top surface, water will last a long time in one of these reservoirs. There is usually idle times when this work can be done very cheaply.

In most sections where the sub-soil is of a loose nature, deep wells are very successful, and a wind mill is not very expensive.

FEED.

It is generally known now that feed will be scarce and high the coming wall and winter. The strictly hay producing sections are not producing their normal quoto; which means that hay will be shipped from other sections that have not been considered hay producing territories in other years.

All the available roughness should be taken care of. Owners of high class breeding stock should arrange for their hay soon. It should be a good quality, properly stored, so as to be in good condition during the next breeding season.

Grain, according to reports, will also be high. A good supply of oats will be valuable and should be stored so as to be free from all mold and rust. Every breeder should arrange to have plenty of old feed so that it will not be necessary to make any serious feed changes through the breeding season.

FEET.

Breeding stock quite frequently have bad feet, as a result of being confined in a very small, dry enclosure. The feet do not have an opportunity to come in contact with the right kind of dampness. As a result the hoof is hardened and greatly impaired. Where this condition is followed up several generations, breeders can only expect this deficiency to be transmitted. This is very important as there are not many breeders who care to be responsible for a particular weakness in their livestock as the result of carelessness.

Stock having access to a yard where the grass receives the morning dew, or an occasional rain, will usually remain healthy. This enclosure, however, should be well drained and the manure should be kept well cleaned out. Contaminated fluid, as a result of manure, is injurious to the feet. Horses or jacks not having such accommodations should have moisture applied. A very good method is to have a bucket of clay and fill the bottom of the hoof several times a week with new clay. If there should be an excessive amount of secretion around the frog, salt tamped in these openings will give good results.

DRAFT AND SADDLE HORSE FUTURITIES.

Futurities have been in existence among race horse men a great many years, but within the last few years futurities have been staged for saddle horses and draft horses. This season will eclipse all former years in this direction. Several have taken place with marked good results; others offer great promise.

This is a thought in the right direction. It has encouraged the breeders to thoroughly develop the progeny. Some of the best developed yearlings ever brought out have appeared in the show ring this year. Breeders are beginning to realize the necessity of this thorough development. These exhibitions are bringing to light the real merits of the various sires. One of the big lessons in live stock breeding is to thoroughly understand the value of the right kind of a tried sire.

SCIENTIFIC BREEDING.

A recent conversation took place between two breeders. One of these men contended that it was necessary for a breeder to understand his business in order to receive the greatest amount of profit with the least expense. The other breeder made the statement that he knew more than he had time to put into practice, and that there was nothing to scientific breeding. This argument lasted a considerable length of time but the one who contended that scientific breeding was a necessity was also a reader of the American Breeder. The other individual was not a reader, neither was he a progressive man.

The way to silence these men who do not have good horse sense is to ask them a good line of questions. This will soon reveal their ignorance. We would like to request every reader of the American Breeder to study up a few good, stiff questions and be prepared to silence these men who do not wish to learn. When an argument of this kind is started, watch the expression on the other man's face and see how long it will take him to get mad and state that he has never studied those big words. A few questions like the following will be sufficient:

Which hand do you use to palpate the left ovary?

How does fertilization take place?

What would you look for in rectal examinations?

What conditions will prevent fertilization in the mare?

How do you make ovarian examinations?

What fluids compose semen?

If both ovaries are cystic what would be your conclusion?

When spermatozoa are not discharged, will the female settle?

What would be your diagnosis if a large kidney was found?

What does the clitoris do during heat?

How do you tell when there is pus in the uterus?

Make the test for acid.

How many spermatozoa are discharged at a single service?

Describe horse pox.

Describe a diseased mare.

Is it safe to make a service on a diseased mare?

Describe the functions of the epididymis.

HERE AND THERE ON THE IOWA STATE FAIR GROUNDS.

HORSE AND CATTLE BREEDING SCHOOL.

At the request of many breeders a cattle breeding school will be started November 10. The first week will be devoted entirely to cattle with the exception of one-half day, which will be devoted to hog breeding. The following week, beginning November 17, will be the regular horse breeding school. These schools will be separate, consisting of one week each, but those who care to attend both may do so for the one tuition fee. One tuition also pays for a life membership with as many return privileges as the student cares to attend.

Those who have attended at former terms will be admitted to both schools without further cost.

There is as much to learn about cattle breeding as there is about horse breeding. This information may be more easily put into practice on cattle than with horses. The average man interested in cattle breeding usually handles his own herd and can handle them as he chooses. A lot of investigations have been made concerning cattle production. The regular instructors of the horse breeding school will be employed at the cattle breeding school, with the exception that there will be some new members in both schools. Every instructor except one, at both schools is either a post-graduate veterinarian or a professor from an agricultural college.

The date of this school was changed from December to the advertised date, as it was thought to be the best time for breeders to leave home. A diploma will be issued for each school provided the student passes the required examination. It will not be necessary to attend both schools in order to graduate; complete instruction is given in both courses.

There are many who will avail themselves of this opportunity to attend both schools while in the city. There are many horse breeders who may interest themselves in cattle and hogs, and practically every cattle or hog breeder is interested in horses. About three-fourths of those who have attended this school are interested in cattle or hogs and a very large per cent of them have registered stock of one or the other kind.

The tuition fee is $25 for one or both courses. This entitles the student to return at as many terms as he cares to without further cost. The school is guaranteed to be perfectly satisfactory to the student or his tuition fee will be refunded; he alone is to be the judge. At both courses the work will begin every morning at 7:30 and last until 10:30 at night.—Advertisement.

SHORTHAND IN 30 DAYS

We absolutely guarantee to teach shorthand complete in only thirty days. You can learn in spare time in your own home, no matter where you live. No need to spend months as with old systems. **Boyd's Syllabic System** is easy to learn—easy to write—easy to read. Simple. Practical. Speedy. Sure. No ruled lines—no positions—no shading, as in other systems. No long list of word signs to confuse. ONLY NINE CHARACTERS to learn and you have the entire English (or any other) language at your ABSOLUTE COMMAND. The best system for stenographers, private secretaries, newspaper reporters, lawyers, ministers, teachers, physicians, literary folk and business men may now learn shorthand for their own use. Does not take continual daily practice as with other systems. Our graduates hold high-grade positions everywhere. Send to-day for booklets, testimonials, guarantee offer, etc.

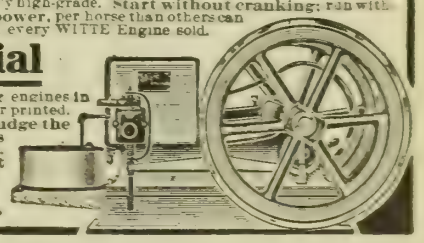
My New Book is Free to You

Write for My Latest Reduced Prices

WITTE Engines DIRECT from Factory to Use.

BE your own engine agent. The cost is only a postage stamp. I **sell to users, direct, for my lowest Factory Prices**—lower prices, even, than dealers paid me, when I sold exclusively through them, for 26 years. I quit the middlemen, and with my improved factory facilities, am able to **undersell** the entire field of good engines.



WITTE Engines 1½ to 40 H.P.

Use Gasoline, Gas and Oil

Recommended by thousands of users in all parts of the world. 54 Sizes and Styles—Stationary, Skidded and Portable—meet every farm and shop power need. Made famous by their superior quality features—detachable cylinders, vertical valves, 4-ring pistons, automatic controlled electric ignition—merits, without which no engine can be really high-grade. Start without cranking; run without watching, day or night, if you wish. Cheaper power, per horse than others can give. ***A Binding Five-Year Guarantee*** with every WITTE Engine sold.

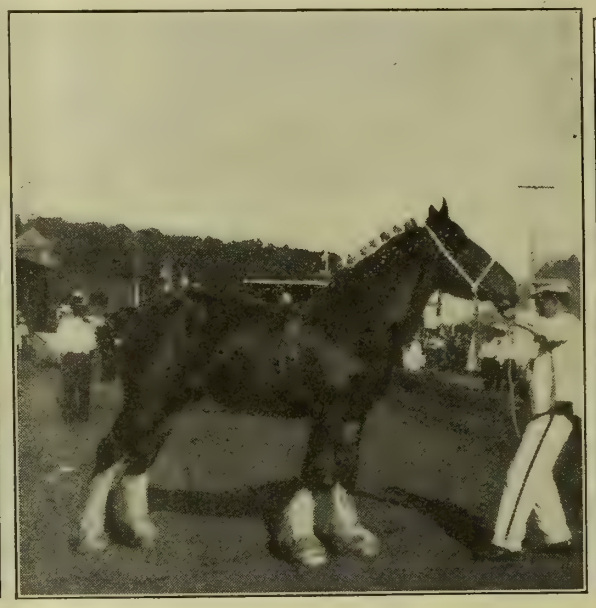
60 Days' Free Trial

Full information of my new and fairer plan of selling engines in my ***Great New Free Book.*** No other like it ever printed. Lays engine secrets bare and shows plainly how to judge the value of any engine. Also quotes factory prices and gives easy terms of payment on credit sales. Send no money—just write me the work you want done. I'll guarantee to interest you at once.

ED. H. WITTE, WITTE IRON WORKS CO., 2556 Oakland Ave., Kansas City, Mo.

American Breeder Camera at the State Fairs

Grand champion Percheron stallion of Iowa and Nebraska, Jeun; owned by W. S. Fox.



Iowa—Wm. Crownover's grand champion Belgian stallion, Farceur.

Iowa—Trumans' grand champion Shire stallion, Coleshill Diamond King.

Iowa—W. W. Weston's Clydesdale futurity filly, Princess Quana.

Iowa—L. N. and O. B. Sizers' first prize yearling Clydesdale stallion, Tappan Eldorado.

Iowa—John A. Buswell's grand champion Percheron mare (yearling) Conceorous.

BETTER COLTS WILL BRING CONVERTS.

To the American Breeder:—I have been a reader of the American Breeder for three years and I think it the best paper that stock breeders take. We stood a registered Percheron stallion this year and did pretty well with him; thinking of trying the capsules next year. We have a good jack for sale or trade. Would have sent picture and measurements for the jack show, but he wasn't quite old enough. The people around here don't raise many mules and it's pretty hard to do much with a good horse. There are five scrub horses right here in our neighborhood, all within ten miles of us, so a fellow hasn't much chance, but when they see some good colts next year, maybe they will look for better sires—Clarence. Robison, Wheeler County, Oregon.

IOWA STALLIONS 70 PER CENT PURE.

To the American Breeder:—Under the heading of "Is This True of Iowa?" written by a Kansas subscriber, you have surely been misinformed. I quote from the Secretary of Agriculture Report of December 12, 1912, "Seventy per cent of all the stallions in Iowa were of pure breeding, 30 per cent grades; number of pure bred stallions, 5,679; number of grade 2,493, or a total of 8,172 stallions." Allowing 40 mares for each stallion would make 326,688 mares; two-thirds of this number is 217,792, which is the number claimed by the ex-Iowa man bred to grades, or 87 mares to each grade, leaving 43½ mares to each pure bred stallion. The facts are that but few mares are bred to grades that can be bred to registered stallions.—C. A. Luce, Decatur County, Iowa.

MORE ARGUMENT FOR GOOD PURE BRED SIRES.

The American Breeder a year ago presented, on its front cover, an illustrated argument in favor of breeding to a good pure bred sire. It was taken from an actual case in which 100 per cent better income was secured from a mare when she was bred to a registered draft stallion than when bred to a "little mongrel." Last fall the Kansas Industrialist printed the following interesting account of another real experience along the same line:

Fifty-five dollars is good interest for the use of $7 for a year. And when the feed of a colt for another year is saved, the proposition is all the more attractive.

This horseman wasn't very enthusiastic about paying a larger fee for the service of a pure bred stallion. He had been using grade and inferior sires with a fair degree of success. He saw no reason for changing.

A stock farmer living in the southeast part of the state has been rearing a number of colts every year, using the services of a grade stallion.

In the season of 1910 he decided to try a good pure bred stallion just once, to see if it was worth the difference in the service fees.

The second week in this month this stockman held a sale. The three-year-old colts, sired by a grade stallion, sold at an average of $76. The two-year-old colts, the progeny of another grade sire, brought an average of $46. The weanling colts, sired by a pure bred stallion, sold at an average of $101.

The service fee of the pure bred stallion was $15, that of the grade $8, a difference of $7. The feed eaten by the older colts was saved, and $55 more was received for the weanlings than the two-year-olds, and $25 more than the three-year-olds.

FRAUD HURTS BREEDS.

Whenever a breed association for a moment countenances fraudulently acquired pedigrees it hurts the pure bred live stock industry far more than it could possibly hurt, by exposure and expulsion, the rascals perpetrating the fraud.

A few years ago a breed association stood up for and back of one who was caught in the act of selling cattle that had no right to the pedigree accompanying them. It should have cleaned house then and there, as it had to do eventually. It got a backset that will take years to overcome.

During recent years frauds have been proven against certain breeders and importers of draft horses, yet their horse association thinks it serves its own interests best by trying to keep the scandal quiet. A thorough housecleaning would be a big advertisement to that breed and restore confidence in time.

Honesty is the best policy, even in anything pertaining to the farm.—Successful Farming, Des Moines, Ia.

Kerosene Engine

The SANDOW Stationary Engine runs on kerosene or gasoline. Starts without cranking—throttle governed—hopper cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—only three moving parts—portable—light weight—great power—15-day money-back trial. Sizes, 2 to 20 H. P. Send postal for free catalog.
Detroit Motor Car Supply Co.

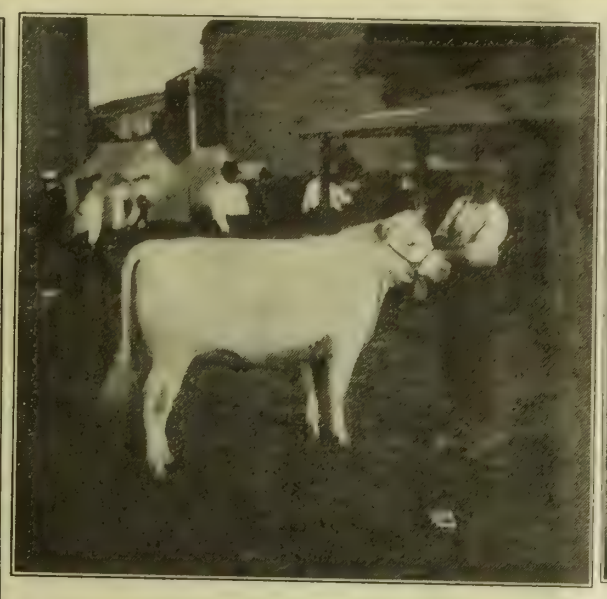
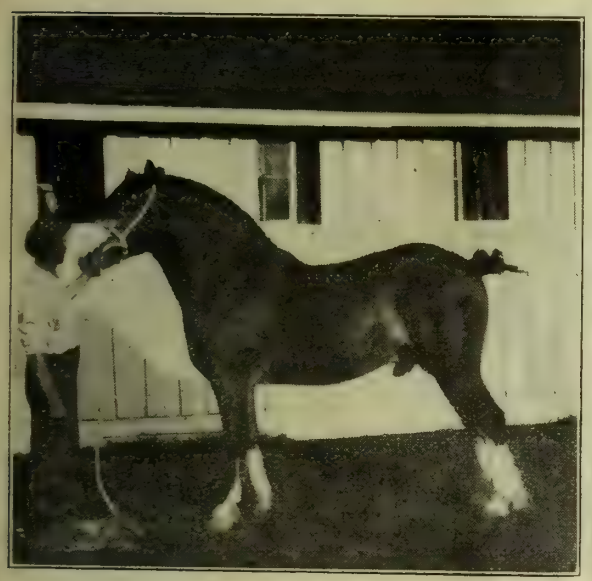
I'M A FARMER



the same as you and love to take good care of big horses. My big bunch of registered Percheron studs, weanlings to four years old, are the class you will like; money-makers for you at my breeder's prices. Fast trains all directions. **FRED CHANDLER,**
Route 7, Charlton, Iowa.

American Breeder Camera at the State Fairs



Iowa—Corsa's Carnoress, first of the five Carnot yearlings that stood 2d, 3d, 4th, 5th and 6th in class.

Nebraska—Owen Kane's junior champion Shorthorn heifer, Isabella.

Nebraska—T. B. Bowman's first prize Percheron yearling filly, Madame.

Iowa—H. Harris Ford's Prince Cedric, champion of the Iowa Clydesdales.

Nebraska—G. M. Clark's second prize draft team in harness.

Iowa—C. J. Jones' Hermine, first prize aged Percheron mare, Iowa class.

BREEDING STOCK PRICES.

More than the usual interest has attended the opening of the fall fair season, which, as a rule, marks also the opening of the season for public and private selling of pure bred breeding stock. It was generally recognized that the wide-spread dry weather and excessive heat would interfere with the attendance at the state fairs, as well as with the number of animals exhibited at the earlier shows. What these conditions would do to prices was the cause of much discussion.

In one important line of live stock the answer came almost before the first (Iowa) state fair had opened, in the sale of the entire Hereford herd of J. P. Cudahy at a price not stated but probably not far from $75,000. The 437 head which included calves and all, were sold by Mr. Cudahy to Warren McCray of Indiana. Mr. McCray has reserved some of the animals for himself for show and breeding purposes and has already sold out all of the remainder at large profits. The price of $5,000 is reported for the champion show bull, Fairfax 16th, and $2,500 and $1,000 for two other famous bulls. These were included in the sale of about 70 head to A. B. Cook of Helena, Mont. The cows, which comprised most of this sale, were reported to have brought $300 to $350 each. Buyers came to the Cudahy farm from all over the country and every animal that Mr. McCray wished to spare was soon disposed of.

Exhibitors of Shorthorn cattle are reporting the most active demand in years. One Nebraska breeder has already sold out of the herd he is now exhibiting, two young bulls, one a sucking calf and the other a junior yearling, and both of his own breeding, for $1,000 each.

Among the draft horse men the demand for stallions has been so active that several smaller exhibitors are cutting short their show circuits because of the animals already sold at the fairs and shipped after the fairs to the new owners. The general feeling seems to be that this means heavier importations later in the fall and a big winter's business.

As an indication of the value breeders put upon promising young things, we quote the sale of the first prize yearling and champion Percheron mare, Couceorous, for $2,000. This sale was made by the owner and breeder, John A Buswell, of Bradford, Ill., to Senator White of Virginia. At the same show where this filly made her winning, the first prize Percheron yearling stallion sold for $1,500.

OUR ADVERTISEMENTS

represent firms and articles that we believe to be reliable

We refuse all whisky and beer advertising and all advertising of medical nostrums and questionable medicines, and medical institutions. We refuse all "get-rich-quick" scheme advertising, fake jewelry, and cheap, sensational book and music advertising. We refuse to carry the advertising of live stock breeders and importers who have become notorious for crooked or disreputable practices.

This advertising, such as we refuse, pays the highest rate to the papers that will take it, and "asks no questions." When you see this kind of business in big, well-established, money-making papers, therefore, you have some idea of the income the American Breeder sacrifices in refusing to carry it.

If you believe we are doing right and deserve your cooperation, investigate the institutions and firms for which we do advertise, write for their catalogs, buy from them when you can, and always mention the American Breeder.

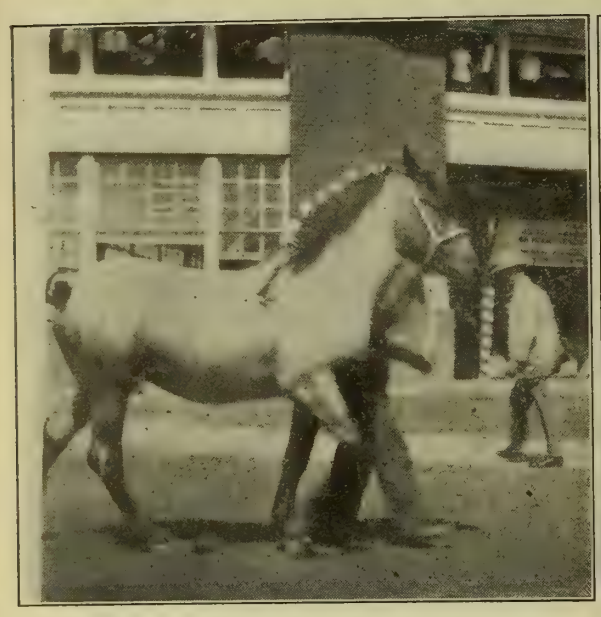
Remember that the prices and quality of advertised goods are more sure to be right than any others, for advertised goods are sold faster, sold more direct, and sold in more open competition than any others.

No More Scalded Shoulders

Don't lose time and money because of sore shoulders. Don't pay out money for Hames and Sweat Pads. Try a pair of Indestructible

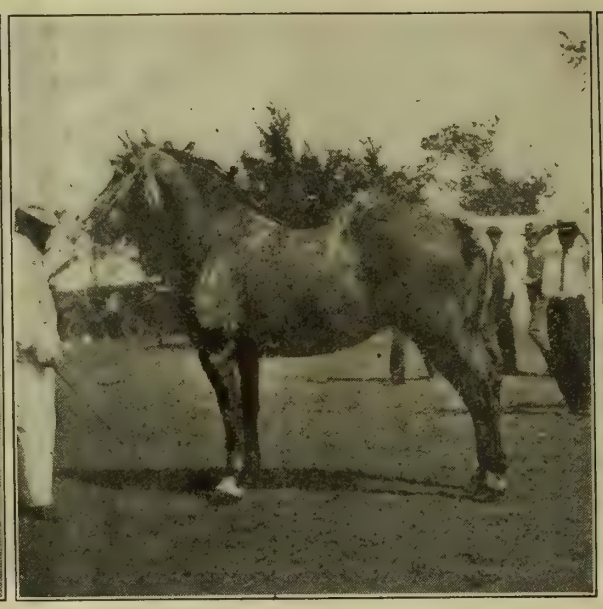
Hameless Adjustable Metal Horse and Mule Collars

Endorsed by veterinaries and men of high authority. A. F. DeLaune, St. Thomas Plantation, Abbemarle, La., writes: "Send me forty steel collars."



Think what that means to the horse owner. Think of the time saved, money saved and suffering saved the mules. This is the next best thing you could do with a collar that prevents against galls and sore shoulders. Be humane, progressive and up-to-date and save money by using

Indestructible Collars



and you'll be free from sore shoulder troubles. The metal won't permit the sweat to scald and produce a sore. Being adjustable they fit the neck and bring the draft to correct point. Durable—last a lifetime. The ideal work horse and mule collar. Be sure and test out this great Twentieth Century invention. It is in successful use. Good Agents Wanted. Manufactured by

Johnston-Slocum Co., 933 State St., Caro, Michigan

American Breeder Camera at the State Fairs

Nebraska—North & Robinson's junior champion Belgian filly, Henrietta M.

Nebraska—J. A. McFarlane's champion Percheron mare, Image.

Nebraska—C. H. Zachry's grand champion Shire stallion, Smeaton Aristocrat.

Nebraska—A 2200-pound Percheron mare; real weight.

Nebraska—Howell Rees' grand champion Shorthorn bull, Whitehall Rosedale.

Nebraska—Eastoft Beauty, the champion Shire mare (Zachry's) shown in her working clothes.

TO AVOID DAMAGE FROM WRONG ENTRY.

To the American Breeder: Having seen an inquiry in regard to a stallion making a wrong entrance, and as to whether the owner of stallion is liable for all damages or not, I think owner of stallion is liable for the damage to the mare. Now the stallioner does not know his business if he kills the mare by making a wrong entrance; that is an accident that can not be helped sometimes, but there is no need of killing the mare if it does happen. I have been in the breeding business all my life and have had horses make a wrong entrance, but have never injured a mare so far. When you see that the horse had made a wrong entrance, do not pull him off the mare, but take hold of one of his feet and hold him on until he comes off with his penis drawn clear up into his sheath, and he will not injure the mare in the least. My observation has been that the mare should stand with her front feet up hill; the horse gives better service and there is less danger of a wrong entrance. Also do not hold the mare too hard; let her step forward if she wants to. I like to stand all mares up hill when breeding them. —J. D. McKenzie, Benron county, Minn.

No man is more to be pitied than the one who is satisfied with himself.

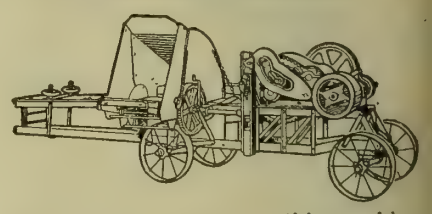
THE INTRADERMAL TUBERCULIN TEST.

To the American Breeder:—This test is so much more convenient and so far as present knowledge goes, so much more accurate than the old hypodermic test that it deserves hearty support from the owners of cattle. It is applied in the following way: With a special syringe two to five drops of Government Tuberculin are injected into the thickness of the skin in the folds. In a non-tuberculous cow nothing happens unless the tiny wound is infected at the time of injections. In a tuberculosis cow a swelling of a definite character begins in about twenty-four hours, and is at its height on the fourth or fifth day. The swelling is quite typical on the second and third days, and these are the most convenient for examination.

The test is official in the state of Missouri and is in use by a number of municipalities, including Boulder and Fort Collins. The great advantages lie in the simplicity of the test, only two visits being required, and no unusual handling of the cattle, and in its applicability to all sorts of cattle, wild and tame, and in all kinds of health, as temperature is not a factor in its interpretation. On the other hand it requires special skill, first in the application, asepsis and intradermal introduction of the needle being necessary, and second in the interpretation, as mistakes can easily be made in differentiating a local injection from a true reaction. In spite of these facts the test is worthy of every possible support.—A. W. Whitehouse, Colorado Agricultural College.

BE CAREFUL ABOUT PIT SILOS.

Pit silos will not be successful east of the ninety-eighth meridian in Kansas. There is danger of seepage water entering and spoiling the silage, experts at the Kansas Agricultural College say. Except on high and well drained spots this type of silos also will be unsuccessful east of the ninety-ninth meridian. Information has come to the college recently of a number of farmers in the state who are digging pit silos where they will be failures.



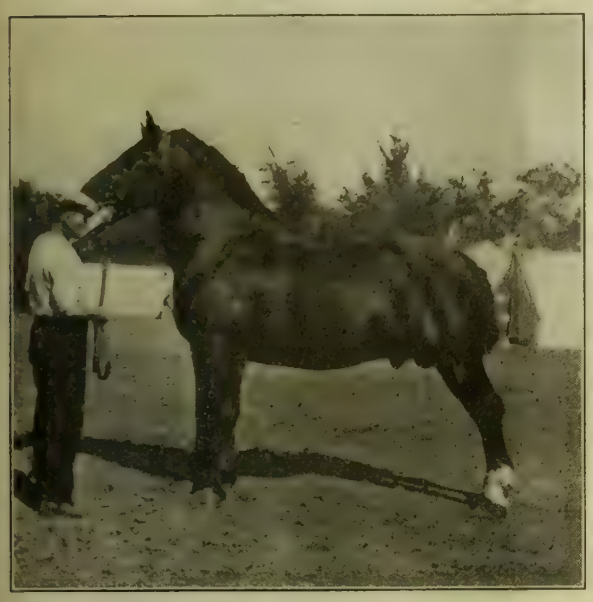
Two feet of woven wire and three barb wires keep dogs out of a sheep pasture. Dogs outnumber sheep in many states, and we have not learned to eat dogs as they do in some European countries. The reason given by most farmers why they do not keep sheep is "the dogs." Kansas had, in 1910, 175,000 sheep and 199,000 dogs, Coburn tells us.—United States Department of Agriculture Report.

Our farmers get only half crops on the average, or ten tons of beets from an acre. They are learning how to farm intensively and will grow twice this tonnage in a few years, when they will not fear reduction of duties. —United States Department of Agriculture Report.

A liberal supply of roots is a good way to keep trouble away from your hogs.

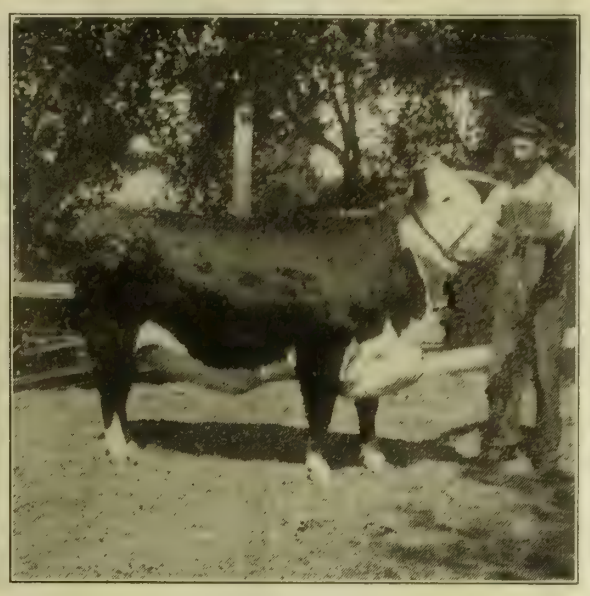
AUTO-FEDAN

(Self Feeding Hay Press.)
MEANS ONE LESS MAN.



Two men can operate this machine. Bale as much as 3 will with any other. Can furnish with 12-horse engine mounted on same frame, direct gear drive, weight only 4,000 lbs. The most compact and nicest machine there is out. Write for catalogue.

AUTO-FEDAN HAY PRESS COMPANY,
1545 W. 12th St., Kansas City, Mo.



N. B.—Consign us your hay. We solicit your orders.

BINDER Attachment with Corn Harvester cuts and throws in piles on harvester or winrows. Man and horse cuts and shocks equal with a Corn Binder. Sold in every state. Price $20.00. W. H. BUXTON, of Johnstown, Ohio, writes: "The Harvester has proven all you claim for it; the Harvester saved me over $25 in labor last year's corn cutting. I cut over 500 shocks; will make 4 bushels corn to a shock." Testimonials and catalog free, showing pictures of harvester. Address
NEW PROCESS MFG. CO., Salina, Kas.

Nebraska—Wolf Bros., first prize group of Percheron stallions.

HORSES AND PONIES AT ILLINOIS STATE FAIR.

The new horse barn now under construction at the Illinois State Fair ground will be completed and ready for use by October 1. This barn is a fire proof structure built of brick and will be equipped with all modern conveniences, for taking care of horses and ponies. The capacity of the barn is 518 stalls, 452 of which are for horses and 66 for ponies. In addition to the stalls in the new barns there will be 300 stalls for horses and ponies in the old barns, some of which have been turned over to mules, and the forage department.

This new horse barn is located upon the site formerly occupied by the old swine pavilion. It is but a short distance from the barn to the coliseum where all the horses will be judged.

This will make it very convenient for erhibitors in this department. In addition to the new horse barn there will be seen at the Illinois State Fair this year two other excellent new barns, one for the swine and one for the sheep.

Some 300,000 cattle were imported by the United States in 1912, practically all Mexican and Canadian product. Export were approximately 30,000 head.

Sample of a breed (Hampshires) that receives its full share of popular attention at the fairs.

TO WIN A SHORT COURSE IN MISSOURI.

The Missouri State Fair Board has arranged to pay all necessary expenses for two young Missouri farmers while attending one term of the Short Course in Agriculture at the University of Missouri.

A $50 cash scholarship is offered as a prize in a corn and stock judging contest, and a similar prize in a corn judging contest. These contests will be held during the Missouri State Fair at Sedalia, September 27 to October 3. The contests are open to all young men in Missouri who have never attended an agricultural college. Information will be supplied by John Stinson, secretary, Sedalia, Mo.

Foolish to Buy Wood Shingles

What's the use of buying common **wood** shingles now that you can get the original and genuine Edwards STEEL Shingles for LESS MONEY? Don't wood shingles **catch fire,** don't they **rot,** don't they **cost a lot of time and money** to put on?

Nobody ever heard of an Edwards Steel Shingle roof **burning up** or **rotting.** And it doesn't take long to put them on. For these **steel** shingles come in great big clusters of 100 or more.

Edwards STEEL Shingles

Each Edwards Steel Shingle not only has thoroughly galvanized sides, **but each EDGE is dipped in MOLTEN ZINC.** No chance of **rust.** All joints are permanently water-tight as a result of our patented Interlocking Device, which takes care of expansion and contraction.

PRICES We sell direct from factory and pay the freight. Our cost of doing business is divided among thousands of sales. Hence our ability to underprice wood shingles. You have been intending to get our prices for some time. Do it this time. Send a postal now—to-day—and get, by return mail, Catalog 976, the Roofing Offer of the Age. Give dimensions of roof if you can, so we can quote price on the complete job.

Live Stock Champions of the Iowa State Fair

It will be worth the while of our readers to preserve the following list of champions at the Iowa and Nebraska State Fairs. In this list we name only those animals winning championships in the open classes. Championships were also awarded in rings limited to animals owned in the respective states, and in some breeds, notably Percherons, championships were awarded in rings limited to animals bred and owned by the exhibitor.

This condition sometimes leads to confusion in one's recollection of the show unless some brief list like the following is kept for reference:

IOWA STATE FAIR.

PERCHERONS.

Champion stallion, Jeun; W. S. Fox.
Reserve champion stallion, Matador; H. G. McMillan & Sons.
Champion mare, Couceorous; John H. Bushwell.
Reserve champion mare, Ilda; Dunhams.

BELGIANS.

Champion stallion, Farceur; Wm. Crownover.
Reserve champion stallion, Jules Remi; H. Lefebure.
Champion mare, Anna du Balcan; H. Lefebure.
Reserve champion mare, Flora; R. F. French.

ENGLISH SHIRES.

Champion stallion, Coleshill Diamond King; Trumans' Pioneer Stud Farm.
Reserve champion stallion, Boro Ragged Boy; Wm. Crownover.
Champion mare, Tatton Aurora; Trumans' Pioneer Stud Farm.
Reserve champion mare, Moulton Primella; F. J. Woltman.

CLYDESDALES.

Champion stallion, King's Favorite; James Pedley.
Reserve stallion, Prince Cedric; H. Harris Ford.
Champion mare, Princess Mae; H. Harris Ford.
Reserve champion mare, Amaryillis; Ethelwold Farms.

SHORTHORNS.

Senior and grand champion bull, Sultan Mine; Carpenter & Carpenter.
Junior champion bull, Cumberland's Type; C. A. Saunders.
Senior champion cow, Maxwalton Missie; Anoka Farms.
Junior and grand champion female, Village Flower 2d; Anoka Farms.

ABERDEEN ANGUS.

Senior and grand champion bull, Erwin C.; W. A. McHenry.
Junior and grand champion bull, Ebony of A.; E. D. and E. F. Caldwell.
Senior and grand champion cow, Blackcap McHenry; W. A. McHenry.
Junior champion female, Queen of Rosemere 2d; Otto V. Battles.

HEREFORDS.

Senior champion bull, Fairfax 16th; J. P. Cudahy.
Junior and grand champion bull, Repeater 7th; O. Harris & Sons.
Senior and grand champion cow, Perfection Lass; J. P. Cudahy.
Junior champion female, Miss Repeater 11th; O. Harris & Sons.

GALLOWAY.

Senior and grand champion bull, Imp. Optomist; C. H. Hechtner.
Junior champion bull, Iva's Favorite; C. S. Hechtner.
Senior and grand champion cow, Daisy Dimple; Capital View Ranch.
Junior champion female, Lassie 2d of Maples; C. S. Hechtner.

RED POLLED.

Senior and grand champion bull, Teddy's Best; Haussler Bros.
Junior champion bull, Teddy's Charmer; Haussler Bros.
Senior and grand champion cow, Nancy; W. S. Hill.
Junior champion female, Rochelle; W. S. Hill.

POLLED DURHAMS.

Senior and grand champion bull, Suktan's Creed; J. H. Miller.
Junior champion bull, Sultan Serene; J. H. Miller.
Senior and grand champion cow, Lady Craven; J. H. Miller.
Junior champion cow, Loch Dale Roanette; Leemon Stock Farm.

GUERNSEYS.

Senior and grand champion cow, Glenwood's Hazel; W. W. Marsh.
Junior champion cow, Imp. Moreland Aquamarine; W. W. Marsh.

JERSEYS.

Senior and grand champion bull, Ocean Blue, Nelle Fabyan.
Junior champion bull, Rose's Fairy Boy; J. K. Dering.

HOLSTEINS.

Senior and grand champion bull, Sir Jessie Fobes Piebe Burke; J. C. Copestake.
Junior champion bull, Iowana Houwije Pontiac Count; Iowana Farms.
Senior and grand champion cow, Chloe Artis Jewell of Cedarside; C. A. Nelson.
Junior champion heifer, un-named; Iowana Farms.

AYRSHIRES.

Senior and grand champion bull, Bargenoch Gay Cavalier; Adam Seitz.
Junior champion bull, Bargenoch Rising Star; Adam Seitz.
Senior champion cow, Barboigh Maggie 10th; Adam Seitz.
Junior and grand champion female, Barboigh Queen.

BROWN SWISS.

Senior and grand champion bull, My-One-Boy; Allynhurst Farm.
Junior champion bull, Casper Brown of Allynhurst; Allynhurst Farm.
Senior and grand champion cow, Bell of Grattan, Allynhurst Farm.
Junior champion cow, Ernetta G.; H. W. Ayers.

NEBRASKA STATE FAIR.

PERCHERONS.

Senior and grand champion stallion, Jeun; W. S. Fox.
Junior champion stallion, Libretta; Wolff Bros.
Senior champion mare, Image; J. A. McFarland.
Junior champion mare, Madame; T. B. Bowman & Son.

BELGIANS.

Senior champion stallion, Infant; Wolff Bros.
Junior champion stallion, Reuben; Wolff Bros.
Senior champion mare, Mizra De Rurdes, North & Robinson.
Junior champion mare, Henrietta M.; North & Robinson.

SHIRES.

Senior and grand champion stallion, Smeaton Aristocra; C. H. Zachry.
Junior champion stallion, owned by John Rouselle.
Senior and grand champion mare, Eastoft Beauty; C. H. Zachry.
Junior champion mare, Trola; Otto Grosse.

HEREFORDS.

Senior champion bull, Prince Perfection; O. Harris.
Junior and grand champion bull, Repeater 7th; O. Harris.
Senior champion female, Princess 215th; O. Harris.
Junior and grand champion female, Miss Repeater 11th; O. Harris.

SHORTHORNS.

Senior and grand champion bull, Whitehall Rosedale; Rees & Son.
Junior champion bull, Dale Clarion; Owen Kane.
Senior and grand champion female, Violet Goods; Rees & Son.
Junior champion female, Isabella; Owen Kane.

GALLOWAYS.

Senior and grand champion bull, Casino; Capital View Ranch.
Junior champion bull, Pilotte of G. V.; Capital View Ranch.
Senior and grand champion cow, Daisy Dimple; Capital View Ranch.
Junior champion cow, Capital Belle; Capital View Ranch.

POLLED DURHAMS.

Senior and grand champion bull, Sultan's Creed; J. H. Miller.
Junior champion bull, Loch Lochy; Leemon Stock Farm.
Senior and grand champion female, Lady Craven; J. H. Miller.
Juinor champion female, Loch Dale Roanette; Leemon Stock Farm.

ABERDEEN ANGUS.

Senior and grand champion bull, Kloman; A. C. Binnie & Son.
Junior champion bull, Kemp; Binnie & Son.
Senior champion female, Blackbird Perfection 2d; Chas. Escher.
Junior and grand champion female, Blueblood Lady 3d; Chas. Escher.

HOLSTEINS.

Senior champion and grand champion bull, Ollie Johanna Sir Fayne; Iowana Farms.
Junior champion bull, Iowana Sir Ollie; Iowana Farms.
Senior and grand champion cow, Lady Abbekirk Golden; State Indian School.
Junior champion cow; State Indian School.

JERSEYS.

Senior and grand champion bull, Glenida's Champion; Hunter & Son.
Junior champion bull, Stockwell's Champion; J. B. Smith.
Senior and grand champion cow, Warder's Proud Beauty; J. B. Smith.
Junior champion cow, Gillivan's Fride 2d; Hunter & Son.

DUROC JERSEYS.

Champion boar, Golden Model 34th; Waltmyer.
Champion sow, Fancy Advance 2d; Clarence Wallace.

POLAND CHINAS.

Champion boar, The Big Orphan; Tim Neuhofel.
Champion sow, Marie; W. A. Lingford.

Presenting TWO ways to get up early

He'll get you up *on the installment plan*, a little at a time, by ringing every other half minute for ten minutes, so you'll wake up *gradually*. Or he'll do the whole job all at once, with one long, straight, five-minute ring.

You can set him to do it as you choose, and *shut him off short* in the middle of his call either way.

That makes him *two good clocks in one*, to suit everybody's taste in early rising.

He plays no pranks. He won't go off before it's time and rob you of your full measure of sleep. He won't go off behind time and rob you of your work time. It's Big Ben's business to run on time, to ring on time and to stay on time.

Big Ben attends to his own business and helps you attend to yours by getting you and the farm hands out early.

Then he sticks around the house and keeps time all day for the women folks so they can have your meals on time.

There never was a clock that fitted in better with the farm work.

He's triple-nickel plated and so handsome you'll want to keep him in the parlor instead of a bedroom. Stands seven inches tall from the top of his head to the tips of his toes; has big, easy-winding keys, large hands, and big figures that you can read at a distance on dark mornings, and is built of good implement steel so he'll last for years. He's doing this kind of work in 3,000,000 American homes today.

Twenty thousand jewelers sell him—one in your neighborhood, probably. If yours doesn't, just send a money order for $2.50 addressed to *Westclox, La Salle, Illinois*, and he'll come to the front door, if the parcel post does, charges prepaid.

A FARMER'S LABOR INCOME.

To the American Breeder: — One measure of a farmer's success is the amount of money which he has left to pay him for his own labor after he has met all other expenses of running his farm, including interest on his investment. The legitimate running expenses of the farm do not include personal, living or household expenses. This sum received by the farmer for his own labor for the year is his labor income.

Some farmers are making labor incomes about as large as their hired men and some are making good yearly salaries. Others are receiving little or nothing for their labor. Their farm income is largely or entirely from the interest on their investment.

Farmers who are not making labor incomes equal to the wages of a good hired man would be better off financially if they would sell their farms, put their money out at interest and work for wages.

An example will make this plain. Assume that a farmer has a farm income of $1,500, and that his farm investment is $20,000. Interest on this at six per cent is $1,200. The difference between this amount and $1,500 or $300, represents his labor income. If his net income is only $1,200, then he has no labor income and is working for nothing.

Farmers should keep sufficient records of their business to enable them to determine their labor income. This means taking an inventory at the opening and closing of the year and keeping a record of the expenses and receipts.

If a farmer isn't making ordinary wages, in addition to a fair rate of interest on his investment, he ought to know it and then take steps to learn why and to correct the trouble.

On the other hand some farmers are making more than good interest on their investment and wages for the time which they put in. If they are not making as much money as they would like to it may be because their investment is too small and the time they actually work too limited.—D. W. Frear, Colorado Agricultural College.

CORN HARVESTER with Binder Attachment cuts and throws in piles on harvester or winrow. Man and horse cuts and shocks equal with a corn Binder. Sold in every state. Price $20.00. W. H. BUXTON, of Johnstown, Ohio, writes: "The Harvester has proven all you claim for it; the Harvester saved me over $25.00 in labor last year's corn cutting. I cut over 500 shocks; will make 4 bushels corn to a shock." Testimonials and catalog free, showing pictures of harvester. Address **NEW PROCESS MFG. CO., SALINA, KAS.**

SCABIES QUARANTINE LIFTED IN FOUR STATES.

The Secretary of Agriculture, under date of July 15, has ordered released from quarantine for scabies, a contagious communicable disease of cattle, the remainder of the states of South Dakota and New Mexico. This releases from quarantine in South Dakota the counties of Lawrence, Pennington, Custer, Fall River, Washington, Shannon, Bennett, and Washabaugh. In New Mexico, the quaran-

GOOD SHORTHORNS.

Practical cattle for both beef and milk. Just the kind the farms of the country need, and with breeding and conformation to make show cattle if you want them. I show my breeding stock successfully, but no stock is ever crowded enough to hurt it.

Pleased to show stock, quote prices and answer inquiries at all times.

C. H. White, Burlington, Kas.

JOHN R. TOMSON, Dover Ks.

My herd of Shorthorns is now at the home farm. Gallant Knight's Heir in service. Several good, strong, fleshy bulls ready for service now. Scotch and Scotch-topped.

tine is raised from the following: Counties of Union, Guadalupe, Quay, Roosevelt, Chaves, Eddy, that portion of Torrance county lying east and south of the El Paso and Rock Island railway, that portion of Lincoln county lying east and south of the El Paso and Northwestern and the El Paso & Rock Island railways, and that portion of Otero county lying east of the El Paso and Northeastern railway.

In the state of Montana, the county of Fergus is released from quarantine, and in the state of Nebraska the county of Thomas is released from quarantine for scabies. This means that the prohibition against shipping cattle from these previously quarantined districts into other sections is now ended.

The same order replaces under quarantine for scabies in the state of Wyoming the newly named and organized counties of Platt, Goshen, and Niobrara, and continues under quarantine in Nebraska that portion of Garden county north of the North Platte river, which was formerly part of Deuel county.

Proving Supply Shortages

Dull Period in Horse Market Shortest in Five Years. Certainty of Cattle Scarcity Such That Continued Record Drouth Runs Have Caused Only Moderate Declines.

The market for horses and mules is developing a normal fall capacity. Receipts are increasing and demand is keeping pace with the supply. The summer dull season, which holds from July to September, has run its course, but this year during those two months there was always some demand, and horsemen took less time off from their work than any summer in the past five years. Now both traders and dealers are in their regular places, and Eastern buyers are looking over the supply expecting a good fall business. Other lines of the markets have been affected by drouth conditions but dealers in horses and mules say that the dry weather has cut no figure in the supply or demand. Horses coming now would not have been in any better condition had the season been normal in every particular, nor would quality have been different. The area most affected by dry weather conditions are sections that suffered severely from the horse plague last summer and this year they have been buyers rather than sellers. Some mules were shipped into dry parts of Kansas last week and notwithstanding the extreme parched condition of the ground an unusual amount of fall plowing is going on. Should rains come within the next week that class of work would be executed with renewed vigor.

The bulk of the demand is coming from the south and east and the large cities. Buyers are eager for good heavy drafters to supply Eastern city trade, and that inquiry is augmented by about a normal demand for the lighter classes. Good smooth chunks are taken about as readily as heavy drafters and prices in that class are slightly higher. The plainer kinds have shown but slight price variation, and the common kinds show about the same as two weeks ago. Southern trade is taking both horses and mules of more weight and at the rate they are turning from plain to good grades the cotton belt in a few years will be taking the biggest horses and mules the markets afford. That change has been more noticeable in mules than on horses. About ten years ago the cotton mule was undersize, light build, color made slight difference. Now prevailing demand requires animals above medium size, good color and bone, and well proportioned. Some cottoners are filling their orders with the biggest and heaviest mules offered.

In the past few days some common out-of-condition horses have sold $10 to $15 lower. Feeder buyers are holding back.

Range horse sales continue and reports from ring sides claim that prices this year have been fully as high as last year. The Northwest is a trade zone unto itself and few of these horses are having to find other outlet than in the states where auctions are held. A greater change has occurred in range quality in the past few years than ever took place in equine blood in a similar period in any other section of the United States. The dam blood is past the first cross, and the prevailing blood of the sire is being propelled by the import source. The next cross will bring out even greater changes, and the Northwest can be proud of its horses.

The following quotations are for serviceable sound horses and mules 4 to 7 years old:

Horses—	
Draft, choice, 1,600 lbs. up	$265@300
Drafters, fair to good	165@250
Chunks, good to choice	160@190
Chunks, fair to good	120@155
Expressers and light draft	75@145
Plain dorkers	50@ 85
Southerns, good	150@175
Southerns, plain to fair	85@145
Plugs	20@ 60
Mules—	
13 to 14 hands	$ 90@130
14 to 15½ hands	125@175
15½ to 16 hands	170@235
16 to 16½ hands	230@300

Big Receipts of Cattle.

The movement of cattle from Kansas, parts of Missouri, Oklahoma and Nebraska has reached the maximum proportions of the season. The last Monday in August nearly 38,000 cattle were received in Kansas City and Monday, September 1, 32,000 cattle arrived. Previous to these big runs the record for a single day was made, October 5, with 33,340 cattle, and unless weather conditions take a turn for the better these record runs will continue. In Kansas City last week 95,165 cattle were received in five days, exceeding the previous record by more than 12,000 and nearly equaling the Chicago record of 95,546. In the central West August was the dryest month in a number of years past. In fact, rainfall in much of that area has been below normal since the first of the year. Grass has not only been burnt up, but in many places stock water has given out. Some counties have found an abundant water supply in deep wells, but they are holding their cattle on dry feed or else the fodder that a ruined corn crop affords. Under present conditions it seems that Kansas will have to curtail its cattle supply by still larger shipments.

And while drouth pressure is evident on the one hand, buying by sections prepared to handle cattle was never greater than at present. The Northwest, Texas, Colorado and the Southwest are in excellent condition and are holding on to their cattle. North Missouri, Iowa, Illinois, East are buying thin cattle and the severe effects of the drouth pressure has been materially modified on that account. Prices have fluctuated 25 to 50 cents on the plainer kinds, but there was a stronger tone in the market for well finished grades. Choice steers in Kansas City have sold up to $9.10, equal to the high point this year, and the top price in Chicago was $9.25. The bulk of the choice to prime steers have brought $8.50 to $9 and practically all kinds that have had dry feed are bringing $7.75. Grass fat cattle are making a disappointing showing from the killers' side, and that tends to keep prices down. Most of them are selling at $6.25 to $7.50, some as low as $6, and some up to $7.85. Steers from below the quarantine line are selling at $4.50 to $7.50 and show the usual wide spread in quality. September 1 about 91,000 square miles was released from quarantine regulations. That extended from the eastern cotton belt into Oklahoma. At the present rate of reduction the quarantine line will soon be crowded into the Gulf of Mexico.

Quotations for the various grades of killing steers are as follows:

Prime corn fat steers	$8.85@9.10
Good to choice steers	8.30@8.80
Fair to good steers	7.40@8.30
Common to fair sters	5.75@7.30
Meal fed, choice	7.40@8.35
Feal fed, common to fair	5.75@7.35
Quarantine steers	4.50@7.50

Big Trade in Butcher Cattle.

Big runs have not stalled the demand for butcher cattle. Local killers are taking all the cows and heifers they can handle. Order trade is brisk and countrymen are in many cases competing with killers for supplies. She stuff now is as important to the market as steers, and the ready outlet makes offerings in many cases more attractive than steers. Only "canner" cows sell below $4.50 and any kind with a butcher possibility brings better than $5. Choice heifers are scarce. Full fed kinds would sell up to the top notch of the season. Veal calves are firm. Some sold as high as $12.25 in Chicago last week, and the top price in Kansas City yesterday was $9.75. Bulls are selling at $4 to $6.50.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice	$6.00@6.75
Fair to good	5.00@6.00
Common to fair	4.50@4.95
Canners	3.65@4.45
Heifers—	
Choice fed	$8.25@9.00
Good to choice	7.50@8.20
Plain to fair	6.00@7.35
Common	5.00@6.00
Veal calves	6.00@9.75
Bulls	4.00@6.50

Big Feeder Supply Cared For.

With all records of incoming shipments of stockers and feeders have been surpassed the outgoing shipments have made new high records and prices have been well sustained. Nearly one-half of the total number of cattle received in Kansas City in August were sent back to the country for future stock, breeding or feeding purposes. That the country is short on thin cattle can not be doubted, and were it not for the fact that enforced marketing was in progress from some sections there would not be enough to go around. In the past two days prices have fallen 25 to 40 cents.

The following quotations are for stock and feeding cattle:

Selected feeders	$7.40@7.65
Plain to fair feeders	5.75@6.90
Good to choice feeders	7.00@7.35
Selected stockers	7.00@7.50
Good to choice stockers	6.60@7.20
Plain to fair stockers	5.00@6.85
Stock calves	5.50@8.10
Stock heifers	4.65@6.60
Stock cows	4.50@5.75
Milch cows	35.00@90.00

Hog Prices Turn Down.

Drouth has had more effect on the hog market than any other branch of live stock. Increased receipts have been the rule and the inability of markets, though declared open, to

Alfalfa As a Money Maker

Rich alluvial soil is what is wanted for the successful growing of Alfalfa, the king of forage crops. The Red River Valley has this kind of soil in abundance—nothing better anywhere. We can recommend this land to well-to-do farmers who want something really good. Ample rainfall.

A Crop Every Year

Write for free booklets and magazines to the Kansas City Southern Ry., Wm. Nicholson, Immigration Agent, 671 Thayer Building, Kansas City, Mo.

handle hogs quickly for stock purposes, has turned the entire supply into killers' hands. Theoretically the Missouri markets can handle stock hogs, but government regulations require that such hogs be held three weeks under serum treatment before being shipped out. Some hogs have been so treated and shipped back to the country, but the general practice is too slow and a money loser on a declining market. Hog prices early last week were at the low point of August, and 50 to 60 cents lower than a week ago, but in the past two days 15 to 30 cents of the loss was regained. In the third week in August prices went to above $9 in Chicago, and as high as $8.95 in Kansas City. Monday in Chicago 57,000 hogs were received and the bulk of that supply sold at $7.50 to $8.25, while river markets sold most of their hogs above $8.15 and up to $8.40. Such a price spread in Chicago indicates inferior quality. The present liberal movement includes a large number of pigs, piggy sows and coarse mixed half fat hogs. Such a contribution is clearly at the expense of future supplies and many are predicting record breaking prices for next March.

The following table shows prices for hogs in Kansas City in the past two weeks:

Mon., Aug. 25....	$8.40@8.90	$8.15@8.60
Tuesday.	8.90@8.92½	8.85@8.75
Wednesday.	8.40@8.95	8.40@8.80
Thursday.	8.30@8.95	8.30@8.90
Friday.	8.25@8.80	8.50@8.95
Saturday.	8.15@8.30	8.40@8.80
Mon., Sept. 1..	8.15@8.55	
Tues., Sept. 2..	8.00@8.50	

The following quotations are for hogs:

Choice, 250@200 lbs.....	$8.30@8.65
Choice, 200@245 lbs.....	8.25@8.75
Medium weight.	8.15@8.75
Light weight.	7.60@8.60
Common to fair.....	5.75@7.75
Stags.	5.50@7.75
Boars.	3.50@6.25
Pigs.	4.00@5.50
Bulk of sales.....	8.25@8.60

Strong Tone in Sheep.

Sheep prices held up to the high level of the season until Monday and then turned down 15 to 25 cents. At that price level they were higher than two weeks ago, and above the season's average. But Tuesday another drop occurred and prices now are down to about the August low level. The Northwest run is starting, but the big movement from that section has not begun. There is a good inquiry for both the grades and stockers and feeders. Fat lambs are quoted at $6.50@7.25, yearlings $4.50 @5, ewes $3.75@4.25, muttons $4.25@ 5, and feeding lambs $5.25@6.65.

The Movement of Live Stock.

August receipts showed that the line of drouth lay in Kansas City territory. At that market, receipts were 266,000 cattle and 21,000 calves, breaking the previous August record for cattle by nearly 10,000. Hogs increased 77,000 over August, 1912, and sheep decreased 23,500. In Chicago cattle decreased 33,000 and sheep 69,000, but hogs were 119,000 more last month than in the same month a year ago.

In eight months this year the five Western markets received 25,000 more cattle, 831,000 fewer hogs and 439,000 fewer sheep than in August, 1912. In the eight months combined receipts at the five markets were 4,614,000 cattle, 11,263,000 hogs, 6,799,000 sheep.

WHO HAS DUTCH BELTED CATTLE?

We have just answered the second inquiry received recently concerning Dutch Belted cattle. If any of our readers have cattle of this breed for sale it apparently will pay them to advertise. So far we have been referring inquiries to the secretary of the Dutch Belted Association, E. J. Kirby, Covert, Mich.

FOR SALE OR EXCHANGE

1000 pound Kentucky Jack; coal black with mealy points. Cash, or will exchange for registered Percheron fillies, registered Shire stallion under two years old, young mules, or four cylinder automobile in first class condition. Call on or address,
G. Fred Skank, Henderson, Iowa.

JACK SHOW TO SUBSCRIBERS

Our Readers to Choose Among the Entries Shown by Judges' Decisions to Belong Near Head of the List.

It is no easy matter to judge jacks from photographs and measurements. We knew that beforehand, and the reports from three good, practical jack breeders, whom we called on for the job, have emphasized the fact.

Even with the jacks themselves right on the ground for inspection and handling, it would be a hard job to choose with certainty, the better ones from a collection like that represented in the American Breeder Jack Show. The judges we chose are among the leading jack men in their respective states of Missouri, Kansas and Kentucky, men with the age and experience, and the practical knowledge of mule market requirements, to make their selections instructive. That their decisions are based on sound information is shown by the fact that out of the big list of entries there was a majority vote on four of the animals named for the six places. For instance, two of the judges put a certain number in third place, while one put him in second place. One judge selected another jack for first place, another put it second and the other put it still lower.

The judges have done the American Breeder and its readers a good service in thus "drawing the short leet" as it is called in show ring parlance, and now we are going to ask the jack men among our subscribers to take up the job at this point, and vote on the particular animals for each of the six places. For convenience in voting we print a coupon at the bottom of the page. This can be cut out and sent us in an envelope bearing a two cent stamp.

Vote only on the numbers given below. The judges have shown us that this list is not far from right for the six places, and in a show as close as this one it almost takes a majority vote from a large number of well posted men to settle the fine points. The jacks from which you are to make your choice for first, second, third, fourth, fifth and sixth places are as follows:

No. 21; No. 28; No. 30; No. 33, No. 42; No. 47.

No one but a subscriber can vote; sign your ballot with your name and address.

No one interested in any of the jacks should try to influence the voting. This affair is purely to gain information and promote interest in an important class of stock.

No vote will be counted which reaches this office after ten o'clock a. m. on September 15.

The result of the vote will be announced is our issue of September 20, and in the same issue we will publish the list of jack entry numbers, giving the name and owner's name to correspond with each.

Now use the coupon below:

To the American Breeder:—

It is my judgment that the jacks entered in your "jack show" whose entry numbers are given above, should be ranked as follows:

1st place, No. ——; 2d place, No. ——; 3d place, No. ——

4th place, No. ——; 5th place, No. ——; 6th place, No. ——

Signed: .....

Town ..... State .....

MAKE A BID ON THIS JACK

KING LEO (see picture); 8 years old; 62 in. high; 69 in. heart girth; 8¾ in. bone (foreleg, smallest place).

Or This One

BILL BOY, foaled Oct. 12, 1910; black with light points; 59 in. high; 64 in. heart; 18½ in. arm; 8 in. bone; 14 in. knee; 33 in. across ears; 80 in. long; 30 in. poll to lip.

Highest Bid Buys Them

Both Jacks are broke to mares and all right. Come and see them, or write for full particulars. Then make me an offer on either one or both. All offers will be held until October 5, 1913, when both jacks will go on the highest offers received.

J. W. GILLUM, WING, Yell County, Ark.

BARGAINS! I am cleaning up my stock of Big Jacks and Draft Stallions

And am making the lowest prices you ever heard of for stock as good.

Just come here, pick out what you want and if you don't buy it won't be the fault of the price.

I don't believe in having any good, serviceable stock left when the season ends, and this is the way I keep from it. Come and see.

W. J. Finley, Higginsville, Mo.

QUESTIONS AND ANSWERS

INJURED STALLION—I have an imported stallion that was kicked on the stifle and right side of sheath, which swelled badly. The swelling soon left and we allowed him to make a service, and when he came off the mare there was a bunch as big as a hen's egg on the side of his penis, and is still there. It is not sore. We are not using the horse. It is about the center of the penis lengthwise and only on the right side. What would you call it? And is there anything to do for it?—Oklahoma Subscriber.

REPLY—No doubt the tissues of the penis were injured so that when the stallion developed an erection the part gave way. Discontinue him from service and put a shield or ring on him so as to prevent an erection for several weeks.

LAME COLT—I have a fine jack colt 10 months old that is getting lame in his front legs at the knee joints. Will you please tell me through this valuable paper some way to straighten him up, or at least prevent him from getting any worse?—Kansas Subscriber.

REPLY—Apply the following to the parts twice a day, rubbing in briskly with the hands: Spirits of camphor two ounces, aqua ammonia, two ounces, alcohol twelve ounces; mix all together and after several applications if the parts become somewhat irritated, discontinue for a few days.

SICK MARE—I had a mare come to be bred and her temperature was 105½ in rectum and 106½ in vagina. The owner of the mare was busy so brought the mare at noon and she stood in the shade until 4 o'clock. From all appearances she looked all right except her temperature was high. I refused to breed the mare and told the man I believed the mare was going to be sick. Two days afterward the mare was so sick a veterinarian was called, and he said the mare had been poisoned or shot all to pieces. He did not give the mare

KENTUCKY JACK FARM
Established in 1884.

A fine lot of black Mammoth Kentucky jacks. Big bone and plenty of weight. Will sell at special prices in order to make room for young stock. We sell more jacks to the Western trade than any breeder in Kentucky. Write for prices or come and see me. Guarantee to please our customers.
Joe E. Wright, Junction City, Ky.

FAIRVIEW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address
J. C. HUCKSTEP, Eolia, Pike County, Mo.

TWO VALUABLE SIRES
An Imported Shire Stallion and a High Class Jack, for sale.

The Stallion is Powisland Conquest, dark bay, 1,970 pounds; 7 years old. I sell him account of his fillies. Price, $800.

The Jack is three years, quick server, sure breeder, tested with microscope, sound and good enough for any body. Price, $1,500.
Julius Lebantshnig, New Douglas, Ill.

JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns 2 miles from town.
Phil Walker, Moline, Elk County, Kas.

FOR SALE.
Seven first class jacks; ages one to six. Bred right; raised right. Priced to sell. Colts to show. Mares in foal for those of proper age. Also some good jennets; ages one to seven.
L. W. Garriott, Austin, Scott Co., Ind.

Three Black Jacks
For sale; two to five years old.
Nick Wagoner, Menlo, Kansas. Thomas County.

FOR SALE
A good jack; 5 years old July 20, 1913; 16¾ hands high; 33 inch ears; 22 inch arm; 20 inch hock; 9½ inch bone and 70 inch heart girth. A good worker on mares or jennets. Two crops of colts to show. Cannot be bought for a song, but priced worth the money. No trades considered.
Louis Koenig, Solomon, Kas.

WANTED—GOOD JENNETS.
14¾ hands or more high. Must have heavy bone and body and well bred; regular breeders. Also want a good draft stallion. Give description and price.—**N. B. Mitchell, 143 East Com. St. Springfield, Mo.**

JACK STOCK AND STUD COLTS

I have three jacks, 3, 2 and 1 year old; black with white points and fair size. Also four good sized jennets, two are good producers of jack colts and the others are not old enough yet to produce. One is heavy in foal and the others bred this season. Also two Percheron stud colts. Will sell this stock or trade for good work mules and will close it out soon.

F. W. Pollman, LaCygne, Linn, Co., Kansas

JACKS FOR SALE

Black, white points; 15¾ standard; five years old this fall. Good head, neck and ears and heavy boned. This jack is good enough to head and herd of jennets and is absolutely right in every way. Come and see him if you want a good one, and if you don't find him first class I will pay your expenses.

Thos. Frint, Belleville, Kas., Route 4.

MAMMOTH JACK

For sale. Having rented my farm, I want to sell my Mammoth jack, 16 hands high, 1200 pounds; black with white points.

W. H. FURLONG, Colgate, N. Dak.

SEVEN HEAD OF JACKS

For Sale. I have Missouri, Tennessee and home-raised jacks. Will sell cheap for cash or good notes. These jacks are 15 hands standard measure.

J. E. Young, Branch, Ark.

THE NEW JACK STUD BOOK.

Volume 1 of the STANDARD JACK STUD BOOK is now being distributed. This volume, containing the records of 4,000 jacks and jennets, is published by the STANDARD JACK AND JENNET REGISTRY OF AMERICA.

This association is incorporated under the Missouri state laws and the statements in each application for registry are made under oath. All the officers of this record, excepting the secretary, are actually engaged in breeding jacks and jennets and together own about 1,000 females.

The mule business has grown rapidly. It is estimated that about one-fourth of the mares in the United States are bred to jacks and that there are nearly 5,000,000 mules in this country, worth $875,000,000 in round numbers. Here is the first volume of a record established on the basis of developing jack stock best suited to the needs of our great mule industry. Every man interested in jacks, jennets or mules would do well to purchase this stud book, volume 1 of which is sold for $3 per copy.

Further information may be had by addressing William E. Morton, secretary, 920 Scarritt building, Kansas City, Mo.—Adv.

any medicine or take her temperature, but had cold packs put to her head and feet. This man blames me for the condition of the mare. Would this mare have been worse if I had bred her? And what do you think was the matter with her?—Iowa Subscriber.

REPLY—You appear to have a very narrow minded neighbor to make such a claim, and you did exactly the right thing not to breed her. Had you bred the mare he no doubt would then have claimed you were responsible for her sickness by so doing. The expression "poisoned or shot all to pieces" is a very indefinite diagnosis and one that competent veterinarians do not ordinarily indulge in. We can not say positively what is wrong with the mare but suspect the protracted heated spell is responsible. Very likely this was the cause of the elevation in temperature.

LAME MARE—A mare of ours foaled a mule about the middle of May. About five days afterward we noticed that she was lame behind; seemed to carry the point of left hip higher than the other, and when trotting it was very apparent that she favored left leg. Can not see or find anything wrong that would cause lameness. Can't say she is any better now. She was worked about a week when colt was two weeks old; has not worked since; has been in pasture. What is the probable cause and is there any likelihood of recovery?—Missouri Subscriber.

REPLY—If the mare did not go lame for five days after foaling it is not plain how the lameness could be attributed to that fact. Occasionally a mare suffers from bruises or strains of structures in and about the pelvic region at the time of foaling, which may give rise to lameness. Better give some good veterinarian an opportunity to carefully examine her.

INJURED LEG—I have a valuable mare that was kicked on the hind leg between the hock and pastern. I blistered it two times and then it looked like it was going to gather and break, so I poulticed it and it broke and discharged some bloody matter. The skin is loose on the bone, but is thick. She is not lame on it. Would be very thankful for some information what to do for it to take the swelling out, and to heal it.—Kansas Subscriber.

REPLY—No doubt along with the injury to the soft tissues giving rise to the abscess, there has been some injury to the bone. If so, it is quite likely its covering is involved in inflammation (periostitis). A light blister applied to the parts will no doubt give as good results as anything you can do at this time. Take powdered cantharides one-half ounce, biniodide of mercury one dram, and vaseline four ounces and mix all together. Apply briskly with the fingers to the part for three or four minutes, and permit to remain on for 24 hours, at the end of which time wash the parts with warm water and castile soap. When dry apply a little sweet oil to keep the parts soft. Repeat the blister in two or three weeks, or when the new hair begins to appear.

KICKING MARE—I have a mare 21 years old that became lame July 2. At first she commenced kicking with both hind feet on driving her and another mare to the field to cultivate. When hitched to cultivator she kept up kicking until she was wet with perspiration, and had bruised her legs all up. I had to unhitch her and hitch another horse. I turned her in the pasture and she kicked when let loose for the distance of a quarter of a mile across the pasture. She has kicked more or less ever since. At present she has not kicked for two days, and seems better. At first I bathed her legs in cold salt water, then with liniment. Her hocks are swollen and knee caps enlarged. What was the cause and what kind of treatment can I use? This mare has worked hard for four years through the farming season.—Illinois Subscriber.

REPLY—You do not state whether or not the mare was in heat at the time she did the kicking. This report sounds like the symptoms of nymphomania, a state induced in mares at the time of oestrum, which is usually caused by disease of the ovaries. Af such time mares so affected become hysterical and are in a sense insane. They become vicious, unmanagable and positively dangerous. The treatment you are practicing locally will probably be sufficient for the injuries. Give her quiet rest for a few weeks away from other animals. Give light diet of a laxative nature. Good grass would be best.

ABORTION—I have a mare which aborted in November last from an accident. Bred her the last of March and shows to be in foal. When backing her out of stable and at various other times she throws off bits of a discharge closely resembling healthy semen. I fed her eight ounces of black haw and while feeding it saw no trace of the discharge, but when gone it reappears. Could this occur and she be in foal, or is it possible she has again aborted? If she is in foal, what causes the discharge?—Pennsylvania Subscriber.

REPLY—In face of the discharge noted we fear your mare has again aborted, although cases have been reported wherein a mare has suffered from leucorrhoea during the entire period of gestation, and at the proper time delivered a healthy colt. You should have a man that is competent to pass on the point and make an examination for the purpose of ascertaining whether or not she is with foal. If not, then she should be treated for the condition complained of.

TESTING FOR GLANDERS—Can you tell me how to acclimate a stallion and if it is necessary to have a horse tested for glanders with the hypodermic treatment? I think the test runs a horse down.—South Dakota Subscriber.

REPLY—There is nothing to do in acclimating horses except to use care in the way of diet and service. The notion that mallein is injurious to a horse not affected with glanders is an error. Thus far the subcutaneous test is the most reliable way of detecting cases of hidden glanders, such as can not be diagnosed by the clinical symptoms. In your state glanders does not assume so virulent a form as in states further south, which makes it more difficult to detect. For your own protection the mallein test should be given any suspicious subject you may own.

BIG HEAD—Please give me a remedy for big jaw or big head on horse.—Oklahoma Subscriber.

REPLY—Big head as a general disease is rare except in certain localities, and upon investigation it is usually found that these complaints are based upon some local disease, usualy of the teeth. We would suggest that you have a qualified veterinarian pass upon any case you may have before attempting treatment.

BACON HOGS—Which is the best bacon hog? Is the Chester White or Yorkshire the best for bacon?—North Dakota Subscriber.

REPLY—Of the strictly bacon breed in hogs, the large English Yorkshires are enjoying perhaps the widest popularity of any breed. This

HEAVY HORSES.

Stallion Wanted

Percheron or Belgian, 1900 pounds or better. Must be sound and a foal getter, and priced to sell. Give full description and price first letter.

O. J. BISBEE, Madelia, Minn.

SHIRE STALLION

For sale or trade. Is 8 years old; sound and a sure foal getter. Weighs a ton. Would consider a pure bred mare in a trade.

R. C. Byrnes, Traer, Ia.

150 STALLIONS.

Imported and home-bred stallions. I guarantee to sell you stallions for less money than any firm in America. Come to a Live Horse Market and see all draft breeds. Reference, any Bank in Creston. **A. Latimer Wilson, Creston, Iowa.**

PERCHERONS.

Imported and home bred stallions and mares, from $200 to $900 each. H. Redenius, Rushmore, Nobles County, Minn.

WHITE OAK STOCK FARM

American bred Percheron Stallions and Mares.

The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augstin, Carlock, Ill. R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Illinois.

D. K. ROTH

GIBSON CITY, ILL.

IMPORTER AND BREEDER OF BELGIANS AND PERCHERONS

Not How Many, But How Good.

Square Dealing My Motto. Write Me Your Wants

Geo. W. Souers & Sons

Horse Importers

Huntington :-: :-: :-: Indiana

PERCHERON STALLION

For sale. Usinier Jr. 42735; registered in Percheron Society of America. Pure bred; all black, no white spots. A pleasure to handle him. Has never been over-worked. Lots of colts to show. Weight 1,850 pounds; age nine years. Reason for selling, his colts are getting in the way, and I want to go out of the business. He is a sure foal getter; have had him six years and have always taken good care of him. He is awfully chunky and a well put up horse all over; short coupled and sound; a very easy keeper. Will sell cheap for cash if taken soon. Price, $700; come and look at him; it will surprise you. I mean business.

L. L. Bultena, Lennox, S. D., Route 1.

PERCHERONS, BELGIANS AND GERMAN COACH MARES AND STALLIONS

of all ages for sale. I have recently taken over the entire stock of horses formerly owned by the firm of Ives & Bellman and can furnish patrons with first-class breeding stock of the foregoing breeds. Have a fine lot of last spring's and yearling colts, as well as mature stock to select from. Address, **WILL BELLMAN, R. 1. DELAVAN, WIS.**

MARE TO TRADE FOR STALLION.

I have a fine registered Percheron mare; black; 5 years old; with filly foal at foot and bred again to an imported horse, that I want to trade on a good registered Percheron stallion. Stallion must be a clean throated, typical Percheron that is or will make a ton horse.

H. H. Burns, Argonia, Sumner Co., Ks.

IMPORTED AND HOME BRED STALLIONS AND MARES.

PERCHERONS, BELGIANS, SHIRES.

The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. **Address Hart Bros., Osceola, Iowa.**

CLYDESDALE HORSES

Stallions and mares of all ages for sale.

Also Shorthorn Cattle.

W. A. DeMerritt

Route 2, Plainfield, Ill.

CLOSING OUT.

For sale cheap, one Percheron stallion, one Clydesdale stallion; also two black jacks. Might trade for horses, cattle or anything I can use.

MARTIN WELAND, Walford, Iowa.

Make Money With Poultry

AMERICAN POULTRY is a magazine devoted entirely to helping earnest men and women make a financial success of poultry raising. Its staff of writers is composed entirely of those who have made a practical, instead of theoretical, success of poultry farming, and who are glad to pass on the results of their hard earned experience to AMERICAN POULTRY readers.

There are many pit-falls in the path of the novice which may be entirely avoided by those who will follow the teachings set forth in this magazine. It fully explains how to make a start, how to construct houses, coops, and other devices, how to get a large egg yield, how to cure and prevent disease, how to exhibit, how to get the top price for eggs, how to use incubators and hundreds of other points which everyone wishes to know. It explains the famous secret system through which poultrymen have become rich and afterwards sold for hundreds of dollars.

AMERICAN POULTRY is a large, handsomely illustrated, monthly journal, well printed on fine paper, and should be found on file in the home of every poultry lover. No beginner in the poultry business should think of being without it. It will save him many times the small subscription price. The advanced poultryman will also find it of great value; the articles being varied in their scope.

SPECIAL OFFER. The regular price of AMERICAN POULTRY is 50c per year, but in order to introduce it to several thousand new readers, we will, for a short time, give a 200-page poultry book, which is a complete guide in the poultry business, ABSOLUTELY free to everyone sending 50c for a yearly subscription, or $1.00 for a three year subscription to AMERICAN POULTRY. A trial six months' subscription (without book) will be sent for 25c. Never has so much been offered for so small a sum. Advantage of this offer should be taken at once.

AMERICAN POULTRY
SAVOY BLDG., WILKESBARRE, PA.

is particularly true of Canada and the north half of the United States. In the South many hogs raised have naturally some of the darker color; Tamworths having been raised successfully in Texas and Oklahoma. Where farms are small and range limited it may be that some of the smaller bacon breeds have advantages. The Chester White hog is not generally classed as one of the bacon breeds, although hogs of a good bacon type have been found among the Chester Whites. Chester Whites, like Poland Chinas, have been bred in the United States for a great many years and under widely different conditions, so that a considerable variation in type has resulted. This should be borne in mind in all cases where a choice is being made.

SELL THE HENS.

To the American Breeder:—One hundred days from June 1, your hens will have completed their season's work. If the hens would stop laying gradually and evenly, one by one, you would have one hen less laying each day; in a week you would be boarding seven loafers, in two weeks fourteen, etc. In a few weeks the eggs from the flock will not pay the feed bill, and for the remainder of the season the flock will be a dead loss.

Prices now are higher than they will be 100 days from now when plenty of young stuff will come on the market; does it not seem the part of wisdom to sell the hens as they get through business? It is not likely that the hens older than one year will come back to the lay, but do you know the old ones? Or do you know the young ones that are worth keeping through several months of idleness.

Another advantage of culling now is the added house room the young stock will have, and house room on the farm is always scarce. No business can support loafers, and every thing on the place not laying eggs, (this includes roosters), or not putting on flesh, the young, growing stock, should go to market, week by week.—W. E. Vaplon, Colorado Agricultural College.

ALFALFA FOR POULTRY YARDS.

To the American Breeder:—Alfalfa is one of the best plants to furnish green food for chickens, but ordinarily it soon kills out if over pastured.

Alfalfa crowns that have been cut off and plowed under and that have taken root again, are much harder to kill out, as many have found by repeatedly grubbing out the same stool that has taken root the second time. Such crowns seem to put out shoots from each piece of root that is left in the ground, if the soil is in favorable condition.

Those who desire to establish alfalfa in their poultry yards can succeed in this way by plowing or spading under alfalfa crowns that have been freshly plowed from some field near by. Early in the spring is the best time, while the crowns are still dormant. The crowns should be covered four to six inches deep, and the soil wet down and kept moist and the chickens kept off until the crowns have become established, which will be much sooner than by alfalfa seeding, and will stand much harder pasture.—Philo K. Blinn, Colorado Experiment Station.

EFFECT OF FEEDING METHODS ON EGG HATCHABILITY.

To the American Breeder:—We are hatching a few chicks from the "feeding test" pens here at the Poultry Experiment Station to determine, if possible, if the different feeding methods have any noticeable influence on the percentage of fertility of the eggs, the hatchability of the same, and on the livability of the chicks. We have male birds of the same age and breeding in all pens.

In the pen where the several kinds of feed has been kept before the pen of five White Leghorns and five Buff Orpingtons, and they are allowed to eat as much or as little of each kind of food as they desired, they have laid more eggs than any other of the ten feeding test pens and have eaten the following:

77 pounds oats, principally rolled oats; 60 pounds wheat; 60 pounds corn, principally cracked corn; 36 pounds millet, 24 pounds sunflower seed, 18 pounds kaffir corn, 12 pounds cane seed, 10 pounds oyster shell, 189 pounds water, 130 pounds buttermilk.

They are allowed to help themselves and they drink a little more water than buttermilk. They have eaten but little of anything else than the feeds mentioned above and but very little ground feed of any kind. They have eaten twice as much cracked corn as whole corn. The hens in this pen do not seem to be any fatter than the hens in the other pens. They are in just good laying condition thus far.

The Canadian method of feeding laying hens is one of the most simple methods of feeding hens. Thus far it has proven to be one of the most satisfactory and the hens are making a good egg record.

In winter months the grain mixture is composed of two-thirds corn and one-third wheat, thrown into the straw litter. In summer, one-third corn and two-thirds wheat. In the spring and falls months, equal parts corn and wheat. We feed about a pint to ten hens in the morning and perhaps a little more at night. Rolled oats are fed from a hopper. The hens are also supplied with grit, shell, charcoal, and some wholesome green food. They are given nothing to drink except buttermilk. In our opinion, this is a very well balanced ration for any farmer to use. It is about as simple best results.—T. E. Quisenberry, Missouri Poultry Experiment Station.

It pays to protect hogs against cholera. Potent serum from a responsible source should be used and it should be administered by some one who is competent.—Dr. M. H. Reynolds, Minnesota University Farm.

Control of the Stable Fly

This Tormentor of Live Stock and Carrier of Disease Caused $25,000 Damage in Northern Texas Last Year. Particularly Harmful Throughout United States During the Late Summer.

During the late summer of 1912, the actual death loss of live stock in northern Texas caused by the stable fly is conservatively estimated at $15,000, according to Farmers' Bulletin No. 540, recently issued by the Department of Agriculture. The loss due to the reduction in milk supply may reasonably be placed at $10,000 and other losses far surpass these two items.

This estimate was made for only a few counties in northern Texas where the fly was most abundant, but important losses from it are sustained in practically all parts of the United States. Besides literally worrying cattle, mules and horses to death and killing them by extracting their blood, where it is worst, the deadly fly also transmits disease from one animal to another. A tropical sickness known as surra is undoubtedly transmitted thus. Fortunately this does not occur in the United States at present, but unless great care is exercised in importing stock it may be introduced at any time and the deadly fly given a chance to spread it. A related disease of cattle, horses and sheep known as souma, and a malady of hogs and cats are also carried, at least in part, by this same insect.

Investigators also consider it to be an agent in transmitting glanders, while a disease known as infectious anemia or swamp fever of horses is thought by some to be carried by this fly. A number of years ago it was found to act as a transmitter of a species of roundworm that infests cattle.

Animals weakened by loss of blood are more prone to contract other diseases. "Texas fever" in an acute form often attacks live stock that has become less energetic in fighting with stable flies. The joints of both horses and cattle sometimes become so swollen from standing in water where they sought protection from flies, that they can hardly walk.

Man Not Immune to Attack of Stable Fly.

Even man may be inoculated with disease by this pest. Septicemia (blood poisoning) is considered to be carried by it and demonstrations of famous physicians have pointed to the possibility of the transmission of infantile paralysis in the same manner. Thus it will be seen that the transmission of a formidable array of diseases is chargeable to the stable fly.

The stable fly is one of the most widely distributed of insects, being common in both tropical and temperate regions where domestic animals are reared. In regions bordering on the tropics the flies are of importance throughout the entire year. In the extreme southern part of our country there is no month during the year in which flies are not annoying to horses and cattle. In the Northern states the fly is particularly injurious and abundant in the late summer and fall.

Investigations made during the 1912 outbreak showed clearly that the vast majority of stable flies breed in straw stacks. It was also shown that while the fly also breeds in pure horse manure, it favors a mixture of this substance with straw. The development of this insect is somewhat slower than that of the house fly and it is therefore quite necessary that the eggs be deposited in rather large quantities of material for it to breed out successfully.

As with most insects the destruction of this one when it is actually doing the injury is what is most desired by those concerned. With this species, as with many others, this is the most difficult time to accomplish the desired result.

During the recent outbreak in Texas many different substances were from live stock. Although some materials gave a measure of protection for a time, none had a lasting effect. In addition to the temporary value of these substances, injury was sometimes produced by their application. Many malodorous mixtures, particularly of an oily nature, have some value, but in preparing these care should be taken that they are not made too strong, particularly when animals are being worked in the hot sun. If they are made too strong they are likely to cause overheating of the animal and produce shedding of the hair.

An Effective Mixture to Repel the Stable Fly.

A mixture of fish oil (1 gallon), oil of pine tar (2 ounces), oil of Pennyroyal (2 ounces), and kerosene (half pint) was found to be very effective in keeping the flies off live stock when applied lightly, but thoroughly to the portions of animals not covered with blankets or nets.

Since straw stacks have been found to be the principal breeding places of this insect in the grain belt, the proper care of the straw is by far the most

MORGANS, FEEDING HORSES, MARES, MULES, PONIES, ETC.

For Sale or Trade

For land, cattle or young mules, a registered saddle stallion, a registered trotting stallion, a grade Percheron and three good young jacks. Quitting the business. Priced to sell.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O.

important step in control. The straw should be stacked more carefully than is ordinarily done, by making the sides of the stack nearly vertical and rounding it up well on top in order the better to shed the rain.

All straw not required for later use should be disposed of immediately by burning or by scattering it over the land soon after threshing and subsequently plowing it under, or by burning the stacks. The plowing under of the straw is the most advisable method of procedure, as by this practice large amounts of humus are added to the soil.

All stacks not consumed by stock during the winter should be promptly disposed of in the early spring. This may be accomplished in the same way as has been suggested for the fall. Heavy rainfall on freshly threshed straw produced the unusual outbreak of last year by rendering the straw largely unfit for food for live stock and thus offering breeding places for flies.

In sections of the country where headers instead of binders are used the straw is much more easily disposed of. The general adoption of the field threshers would completely solve the question of the straw stack. It is reported that this machine reduces the expense of harvesting from 14 to 2 cents per acre and the straw is left standing in the field. The field. The chaff is scattered over the ground and the entire refuse turned under at plowing time.

The use of poisons to destroy immature flies is neither practical nor advisable.

Although straw is the principal breeding place for the stable fly in the grain belt, millions of them develop in manure piles. The house fly and horn fly also breed extensively here and therefore the greatest care should be used in dealing with this animal refuse.

Manure should be hauled out and scattered at frequent regular intervals and any accumulations of straw or hay, especially adjacent to stables, should be disposed of. Stable manure being usually in close proximity to human habitations, the flies from it have freer access to man to disseminate human diseases.

The food and drugs act is exacting on department time; 1,459 violations were sent to the Department of Justice during the last year—25 per cent more than in the year before. Jail sentences are now being imposed. —United States Department of Agriculture Report.

FIELD NOTES

PUBLIC SALE DATES.

Upon request we will announce, under this head, free of charge, the date and location and the name of proprietor or manager, for all public sales of pure-bred live stock which are to be advertised in the columns of the American Breeder.

Percherons.

October 20.—Robinson Bros., Morton, Ill.

December 9.—W. S. Corsa, White Hall, Ill.

December 11.—Ben Bohlander & Son, El Paso, Ill.

December 15.—Chas. C. Irvine, Ankeny, Ia.

Belgians.

December 15.—Chas. Irvine, Ankeny, Ia.

Shire Mares.

December 11.—Trumans' Pioneer Stud Farm, Bushnell, Ill.

The original pitless scale—the scale which revolutionized business in this line, and saved stockmen and farmers more money than anything else which ever happened in the scale business—is the McDonald Pitless Scale. This scale is manufactured and sold by the Moline Plow Company of Moline, Ill., and Mr. McDonald, who developed and perfected it, still has active charge of its manufacture.

If you are interested in the poultry business, the proposition now being advertised in our columns by American Poultry, Savoy building, Wilkes-Barre, Pa., will also interest you. The advertisement is headed "Make Money With Poultry." Please look it up.

Those of our readers who live in Illinois, hardly need a suggestion that they use the Illinois Traction System whenever possible in going to and from the Illinois State Fair. For years this electric railway system has given such excellent service in handling the state fair crowds, that it has come to be looked upon as a part of the fair.

J. W. Gillum of Wing, Ark., is offering in his advertisement in this issue two values of special importance in jacks. Be sure to look up this ad.

Perhaps the most distinct improvement in horse collars which has come out for many years, is the collar manufactured by the Johnso&n & Slocum Company of Caro, Mich. This collar is advertised in the American Breeder and we ask every one of our readers to investigate it and to mention the American Breder when writing.

If the jeweler in your town does not keep the "Big Ben" clock, which is a high class time piece as well as an alarm, write the manufacturer. Western Clock Co., La Salle, Ill., and get one of these clocks direct. Their advertisement is in this issue. Mention the American Breeder when you write.

The superior merit of the Auto Fedan hay press is shown by the following letter from one of the manufacturers' Pacific coast customers: "Auto-Fedan Hay Press Co., Kansas City, Mo.—I have used one of your Auto-Fedan presses for four years and baled from 400 to 1,000 tons a year and I have never had any trouble with it and never broke anything and saving the labor of one man means $2.50 to $3.00 per day. It pays for the press in one year. I advise any man who wants to buy a press to buy an Auto-Fedan hay press and he will be surprised the way this press works. It makes neater bales than other presses and does more work and does it easier than other presses. We are in every way satisfied with your presses.—S. Grossi, Gaviota, Calif."

Truman's Pioneer Stud Farm, Bushnell, Illinois, writes: "Our Mr. H. W. Truman arrived here late in August with our Sixth Importation for 1913, havin made the trip from London to Bushnell in the remarkably short time of ten and one-half days which is very quick to move horses that distance. They shipped in very good shape, being practically the only horses on the ship, they had plenty of room and first class attention. 'Karlin,' beyond any doubt the greatest Percheron horse that has left France this year, is a tremendous horse. From what my father and brothers had written me about the horse, I was expecting to see a cracking good one and really they have not exaggerated. He will be exhibited by us for the first time at the International.

Seven head of jacks are advertised in this issue by J. E. Young, Branch, Ark. Mr. Young will sell these jacks cheap for cash.

Thos. Frint of Belleville, Kas., is advertising a first class jack for sale. Look up the ad in this issue and write him for further particulars.

Read the ad of N. B. Mitchell, Springfield, Mo. He is in the market for some good jennets, also a draft stallion.

Don't fail to write to W. H. Fulcomer, Belleville, Kas., for description and prices on his Shetland ponies. He undoubtedly will price them right.

Address Box 192, Pawnee, Okla., and find out all about the five room cottage in Kansas City that he wishes to exchange for Shetland ponies. The ad is in this issue.

Don't fail to read the ad in this issue of Fred Pollman, LaCygne, Kas. He is advertising jack stock and stud colts for sale or trade.

Read the ad in this issue of G. Fred Shank, Henderson, Ia. He has a jack to sell or exchange for fillies, stallion, mules or an automobile.

Anyone in the market for a good jack would undoubtedly do well to correspond with Louis Koenig, Solomon, Kas. Read his ad.

A Shire stallion is offered for sale or trade by R. C. Byrnes, Traer, Iowa. See the ad.

L. L. Bultena of Lennox, South Dakota, is offering his pure bred black stallion, Usinier, for sale at a bargain if taken soon; as he is quitting the business. Read the ad; it gives a good description of the horse.

Three black jacks, two to five years issue by Nick Wagoner, Menlo, Kas.

L. W. Garriott of Austin, Ind., has seven jacks, some mares in foal and a few jennets that he is advertising for sale. See the ad and write him for full particulars.

Don't fail to read the new advertisement of Fred Chandler, Chariton, Iowa, which appears in this issue.

THE RIGHT WAY

BREEDING OUTFIT AT COST

THE IMPROVED CARLSON SEMEN EXTRACTOR AND CAPSULE SYRINGE

This extractor has been improved so that it is much easier to use. The proper temperature can easily be maintained. Anyone should have good results with this instrument by following the directions carefully. This is the only instrument made that has been successfully used for getting the semen from the uterus. We believe this instrument with its improvements will make it possible for any ordinary breeder to use the capsule system successfully. It has a soft metallic point that will stand bending a thousand times. All necessary directions will be sent with the instrument.

Pointed Breeding Capsules

We have the only capsules made especially for horse breeding Some capsules do not dissolve, leaving a foreign substance in the uterus which will prevent conception. Other capsules are too flimsy to use for this purpose. You cannot make any mistake by buying capsules from us as we only have one kind. We have them boxed with 100 in each box. The box is tight so they will be clean. These capsules are properly baked and all bacteria killed before they are mailed. Always keep the lid on the box when not in use.

Price per box (100), $1.50.

Bulb Impregnator

This is the best bulb impregnator on the market. Some dealers sell for $5 and $6.

Price, $2.00.

Veterinary Thermometers

This thermometer is recognized and used by the leading veterinarians for taking the temperature of animals. It has a metal case which insures it against breaking and will last a life-time. It has a small chain with pin in it that may be fastened to the vest pocket and carried with safety.

Price, $1.25.

Thermometer

Tested and used for keeping water at the right temperature.

Price, $1.00.

SPECIAL OFFER

¶ Many breeders are planning to buy a capsule breeding outfit next spring. It will be better for all such to make a beginning this fall. Conditions are more favorable and the opportunity to get some actual experience before the heavier spring season begins, is invaluable. To encourage every breeder to take this step now we make the following special offer:

¶ One Improved Carlson Semen Extractor with the New Point Protector, attached, and one box of 50 Pointed Breeding Capsules, all for $5.00.

Microscopes

For use in testing the semen of stallions or jacks. Magnifies 500 times and is used by veterinarians and physicians. Price $35.00. Boxed in fine case. These instruments are of great value in the breeding business. Through them you can see for yourself and show your mare owner the live spermatozoa of your sire.

Curved Metal Impregnator

This instrument is sold by other dealers for from $5 to $6. It is nickel plated, about 22 inches long, with a glass tube in it.

Price, $4.00.

Breeders' Bags

Three sizes, small, medium and large. Stallions weighing 1,200 or 1,600 pounds usually require a medium size. These bags are guaranteed not to tear from any cause before March 1, 1914. If they do tear before that time return the top part with our stamp on it and 35 cents in cash and we will send you a new bag.

Price each, $1.00.

Directions for Ordering

Send money orders or draft as exchange is always charged on personal checks. Always name your express office as well as your post office address in order to insure prompt delivery.

POSTAGE AND EXPRESS PAID ON ALL ORDERS.

Big Ben

Presenting TWO ways to get up early

He'll get you up *on the installment plan*, a little at a time, by ringing every other half minute for ten minutes, so you'll wake up *gradually*. Or he'll do the whole job all at once, with one long, straight, five-minute ring.

You can set him to do it as you choose, and *shut him off short* in the middle of his call either way.

That makes him *two good clocks in one*, to suit everybody's taste in early rising.

He plays no pranks. He won't go off before it's time and rob you of your full measure of sleep. He won't go off behind time and rob you of your work time. It's Big Ben's business to run on time, to ring on time and to stay on time.

Big Ben attends to his own business and helps you attend to yours by getting you and the farm hands out early.

Then he sticks around the house and keeps time all day for the women folks so they can have your meals on time.

There never was a clock that fitted in better with the farm work.

He's triple-nickel plated and so handsome you'll want to keep him in the parlor instead of a bedroom. Stands seven inches tall from the top of his head to the tips of his toes; has big, easy-winding keys, large hands, and big figures that you can read at a distance on dark mornings, and is built of good implement steel so he'll last for years. He's doing this kind of work in 3,000,000 American homes today.

Twenty thousand jewelers sell him—one in your neighborhood, probably. If yours doesn't, just send a money order for $2.50 addressed to *Westclox, La Salle, Illinois*, and he'll come to the front door, if the parcel post does, charges prepaid.

Do Our Stock Shows Educate?

How Old Country Stock Shows Give Visitors Exactly the Information Which Many Big Shows in This Country Fail to Give. To Breeders' Interest as Well as Farmers'.

"Have you ever visited our fair?" hospitably inquired a new and enthusiastic fair secretary, of the writer, not long ago. "Yes," I replied, "I was with my father when he showed stock there 30 years ago, and have seen most of the fairs since." And I might have continued (for the thought occurred to me) that the improvement in stock show methods during that time was no greater than could reasonably have been made in three years.

The state fairs and other large agricultural shows are supposed and intended to have a great educational value. This article is not intended so much to criticise as to offer such suggestions as might profitably be adopted to this end, and its suggestions are limited to the live stock exhibits.

The live stock industry affords, of course, the principal attraction at each of these shows, or at least should. Are the American shows affording such education along this line as they should? What can really be learned under the present system? The bringing together of the best animals for a comparison offers a wonderful opportunity to the American farmer and breeder for study and advancement.

At most of the European live stock shows of importance, the stock is classed so that all the animals in a particular class may easily be compared, either before or after they have been shown. All of the animals of a certain age, breed and sex, shown for a particular prize, are stabled on the exhibition grounds side by side. For instance, all of the three year old Shire stallions are put in a particular barn which is designated by a large placard, telling what the barn contains and giving the premium list number of the class. Over each animal another card is placed giving the name of the animal, record number, sire and dam, with the exact age, and (in the case of some classes of stock) the exact weight is given; also the name and address of the exhibitor. The card over each animal also has a number corresponding with its number in the catalog. After its class has been shown the judge's rating of the animal will be designated on the card, so that the spectators can have an opportunity to see the winners of the different places side by side and learn something. This opportunity for careful comparison might also have a tendency to stop some of the "rank" decisions which have been complained of in this country, for competent men as well as novices will take advantage of it.

At the shows in this country the entire herd owned by one exhibitor, including all ages, is stabled together. Often there is no way of learing the age, weight, etc., of the different animals except to ask some one connected with that herd while the animals are in the barn. The only time under the present system that spectators have an opportunity to see the stock of one class all together, is in the show ring when they are being shown. The educational advantages to the public at this time are limited. Only a few individuals are permitted to enter the ring and make this close inspection. In fact, even the spectators in the ring are fenced off so that only the judge, owners and caretakers can closely examine the stock. During the showing period the average spectator occupies a seat a considerable distance from the animals. One must admit that this is an interesting scene, but does it offer an opportunity for securing the necessary information?

The proper tagging of animals, as suggested above, would save answering many questions, which every one tires of sooner or later. It is not especially difficult. The tagging of the stalls could be done by the assistant superintendent of each division. In fact, the rules of some of our better American shows provide for cards giving much of the information we have outlined, but these rules, as a general thing are not enforced. Enforcing them to the letter would add very little expense and would make the show much more attractive. It is true that many visit such places through curiosity but that is no reason why those who come expressly to see the stock show be denied these benefits. Moreover, one of the reasons that many individuals are not interested is that they have never had satisfactory opportunity to make these comparisons. Anything that will encourage the American farmer to produce better animals, and thoroughly develop them, will prove a direct benefit to the breeders and exhibitors, and should be encouraged by every agricultural association. Practically every farmer will receive an impetus in the direction of better stock and have an opportunity to learn more about what qualities to incorporate in his own live stock, once he attends a stock show managed something along the lines we have outlined.

ENGLISH SHIRE

SECTION 3 CLASS 50

OWNED BY W. J. Brown & Sons, Elgin, Ill.

NAME Elgin Maid RECORD NO. 12750

SIRE Drayman 27000 DAM Moulton Maid 10101

AGE 2 YEARS 10 MONTHS 4 DAYS

WEIGHT 1640 lbs. WINNINGS Second in 2-year-old class; member of first prize entry for produce of dam; member of third prize entry for get of sire.

SIGNED P. J. Cornish, by D.

Supt. of Horses.

SUGGESTION FOR STALL CARD.

To be used in connection with the plan outlined in this article. The fair association would furnish these cards, and the superintendents, through their assistants, would fill out and post them, having everything but the winnings up when the show opens.

At the Royal Agricultural Shows in England the admission is higher during the judging of the stock, which usually takes place early in the show. Those in charge contend that spectators can receive more benefit by making these comparisons after competent judges have placed the awards. This also places a greater responsibility on the judge, for the animals in each particular class of stock will stand side by side during the show, with their decisions open to criticism during the entire exhibition. Qualified men will have an opportunity to inspect the stock as well as those seeking information.

It has been objected to by some that this method would too greatly favor the spread of infectious disease from one herd to the other. The objection is answered by the fact that as careful a country as England follows it. With the use of individual vessels for water or feed, there is little, if any, more chance for infections, than is bound to occur anyhow when the animals are brought together in the show ring. Every show is subject to such regulation as makes all exhibitors safe on this score.

Others contend that it would discommode breeders or sellers who carry with them animals of inferior quality or condition for the purpose of disposing of such stock. Our understanding is that no agricultural show is held for the encouragement of inferior stock. At too many of our shows there can be found inferior stock that should not be recognized as show-yard animals. It is not the great number of animals assembled together that makes a good show, but the number of animals that portray form and quality of exceptional excellence.

The American farmers furnish the market and the recruits for this great breeding industry. Those who have become extensive breeders often have grown from very small beginnings. Any encouragement that can be given to these beginners is a step in the right direction. At some of the shows it is interesting to watch some of the best farmers try the "bird's eye" view of the stock on exhibition and see how long it will take them to get disgusted and hunt some other line of activity. With a little better encouragement the young men could be interested in these comparisons, and they constitute the particular class that should have this valuable information. With their interest centered in the live stock, the "pike" attractions would not flourish and they would have something of more importance to study and think about than those individuals attired in "abbreviated" clothing.

We have outlined a method of showing cattle and horses at least that can be followed very easily, and it would only be a question of time until much more interest in these animals would be manifested, and the spectators would declare their intentions of returning each year for more education. The benefits of live stock exhibitions of this kind could not be measured in dollars and cents. They would be practically the only place where the best specimens could be seen side by side, affording a fair comparison.

At such shows as the Royal Agricultural Show and the great Paris Exhibition, farmers and all others interested can be seen making these comparisons carefully all day long during the exhibition. This is the real education of stock shows. Why it has been eliminated in this country we cannot understand. At many of the smaller shows in Europe where only a special breed is exhibited, this is also the system. At the great Brussels Belgian Draft Horse Show all of the stock is separated in different classes, even to the aged stallions, which are the most troublesome. This method of distinguishing the different classes makes it easy, even to an American, to whom the catalog and posters are in a foreign tongue.

A little more thought should also be given as to the best method of encouraging beginners to prepare their stock for exhibition. In practically

every state where state fairs are held there is more good stock not exhibited than is shown each year. Some of it is owned by men who do not know its real value, from a show-yard standpoint. If these individuals could have an opportunity to make comparisons and get more familiar with the necessary qualifications, they might be induced to make a start. There is no better way to encourage breeders in the proper development of young stock than to interest them in showing young animals in a good show. When this is once begun the younger members of the owner's family also become interested in the proposition. Fair managements should take pains to remove all grounds for the old idea that a small breeder cannot get recognition at the leading shows.

In some classes, too, the number of premiums should be increased. There are many who would participate in these contests if they could only get a ribbon of some kind. It is not usually the intrinsic value of the prize, but the recognition which is uppermost in the minds of the new exhibitor. Where classes are exceedingly large, and the merit warrants it, premiums should be more numerous. The show management might appoint a committee to investigate the different classes, as to number and quality and to raise the number of premiums in classes warranting these extensions. For instance, several times at the American Royal, when classes of young cattle have been unusually large and excellent, the directors of the record association managing that particular division, have held special meetings and added special premiums enough (as high as ten places) to recognize most of the really excellent animals outside the regular monies.

In the encouragement of new exhibitors different sections apply different methods. Some states provide special classes for animals owned in that particular state. Others (in horses) have classes for American bred animals. Many have classes for animals bred and owned by the exhibitor. An improvement might be made in draft horse classes by making classes exclusively for American bred horses instead of for horses bred and owned by the exhibitor. There are many importers and dealers who do not breed many horses themselves, who would be glad to fit home bred animals for this class. In that way breeders who did not want to show winning animals in that particular class would be encouraged to grow something for another to fit and exhibit and they would also be interested in knowing that the blood they were handling was of the show-yard quality. There are only a few men in a position to breed and show their own draft horses to best advantage, as a rule. If this class was open to home bred animals without the clause of "bred and owned by exhibitor," the home bred horses would make a much better showing in some of the leading draft horse shows. Quite frequently some of the best blood is not in the hands of those who understand development.

There is a great deal of detail connected with managing the large live stock shows. Each department should be looked after by some one interested in, and familiar with, that particular kind of live stock. He should also have a large acquaintance among the prospective exhibitors and those who might be induced to show for the first time. An organization that is satisfied with its present standing will not develop as it should and new efforts must be made each season to meet the existing conditions and opportunities.

Those interested in some particular class or feature must not have the opportunity to boost it to the extent of making a "one-sided" show. In several cases we might mention, the particular class of men that would most benefit the show have not been properly encouraged. The farmers and the breeders must be the main support of these institutions if the best results are to follow. No show will succeed from a farmer's or breeder's standpoint that devotes all its energy to the racing meet or to a light horse show. All of the departments must be brought up together.

Several shows this season have made a special effort to induce the small breeders to bring out their stock; this has been especially true of draft horses. Without a good display of draft horses no show will have the appearance of a complete exhibition. The more exhibitors present, the better the display of stock will please the spectators, if the quality is present. Where a show is made up entirely by a few big establishments, the interest is not as great. The draft horse department of one large show was at one time nearly ruined because it was whispered that it was a "one man" show.

And this point calls to mind a difficulty which same American stock shows have tried to remedy, but none with complete success. The right idea in an exhibition ring, as everybody admits, is to have the competing animals enter it all on the same basis, with nothing in favor of one or the other excepting its own excellence of individuality and condition. It should be properly shown, but tricks and trappings to conceal defects or discourage the beginner, should not be allowed. Some show managers have made rules requiring all attendants to wear a certain uniform, so that the man showing one colt and the professional attendants showing a string of fifty, all "looked alike," but we have never known such a rule long to be enforced. The idea is right, however, and can be carried out.

THE VETERINARIAN'S FIELD.

The Kansas Agricultural College estimates that Kansas lost 9¾ million dollars worth of live stock last year from disease. Two-thirds of this loss, very likely, could have been saved by competent veterinarians, had they been available. It shows the need of trained men to care for the health of Kansas' 255 million dollars worth of live stock, says J. H. Miller, dean of the division of college extension.

"There isn't a bigger or better field of work anywhere for young men than is open to trained veterinarians nowadays," said Dean Miller today. "Each succeeding year has increased the work and enlarged the field for men in this work. The testing of cattle for tuberculosis is opening a broad field; the vaccination of hogs to prevent cholera, the outbreaks of contagious diseases in the state, the shipment of domestic animals from one state to another—all this work is passing into the hands of local graduate practitioners and veterinary inspectors. There is need for men, too, in government service, as city milk inspectors, and to teach in the veterinary schools of the country.

WHAT THE DROUTH DID TO CROPS.

Using Missouri as a basis of comparison, the government has just put out a short table which gives one a good general idea of what the drouth did to the farmer, for conditions in Missouri represent very nearly the average drouth area, which includes parts of Iowa, Illinois, Indiana and Nebraska, as well as most of Missouri, all of Kansas and over half of Oklahoma.

The condition of crops on September 1, or at time of harvest, in Missouri and in the United States, is given below, expressed in percentages, 100 representing normal (which is above an average but below a perfect prospect). For comparison, the averages of similar estimates for recent years (mostly 10-year averages) are also given:

CROP. (Figures are for actual production in case of bluegrass seed, peaches, watermelons and cantaloupes.)	MO. Sept 1, 1913.	MO. Sept. 1, Recent Years.	U. S. Sept 1, 1913.	U. S. Sept. 1, Recent Years.
Corn	64	80	65.1	80.9
Oats	56	73	74.0	79.3
Clover for seed	71	82	81.3	80.7
Millet	49	82	62.6	82.4
Bluegrass seed	65	79	....	....
Sorghum	48	84	69.6	83.8
Broomcorn	48	79	48.6	78.7
Potatoes	47	75	69.9	79.4
Sweet potatoes	42	80	81.4	86.2
Tomatoes	40	80	76.2	81.2
Cabbages	28	73	74.2	81.5
Onions	54	82	78.8	85.2
Apples	38	47	47.7	54.4
Peaches	72	34	47.6	53.6
Pears	44	40	59.1	65.3
Grapes	68	72	75.0	83.3
Watermelons	50	73	75.7	77.5
Cantaloupes	50	73	78.1	77.2
Hay—tons per acre.		1.24	1.31	1.43

The production of tame hay in Missouri is estimated at 1,702,000 tons, compared with 4,143,000 tons last year; for the United States, 63,460,000 tons, compared with 72,691,000 tons last year. Number of stock hogs on September 1 in Missouri is estimated at 180 per cent of the number a year ago; in the United States, 180 per cent of a year ago.

WHEN DOES YOUR ADVERTISING START?

There is a demand for good stock right now. The American Breeder reaches the people who are in the market for this kind and it has their confidence as no other paper has. Here are samples of letters that have come, unsolicited, to this office within the past week:

To the American Breeder:—Please take my ad out of your paper, the American Breeder, for I have several letters and I think I will sell. Let me know how much I owe you.—L. L. Bultena, Lincoln County, South Dakota.

To the American Breeder:—I have been a subscriber to the American Breeder for the past year and consider it the best horse and mule paper published. It is a paper no horseman can afford to be without. Am going to help boost it all I can.—W. B. DeLong, Perry County, Ohio.

To the American Breeder:—I think your paper is one of the best, wide-awake papers I ever used, and brings inquiries from all over the United States and Canada. I thank you for past favors and find enclosed check for $1.00 to continue the paper.—C. E. Thompson, Warrick County, Ind.

To the American Breeder:—I am getting from seven to ten letters per day in answer to my ad. and wish to have you leave it out the next issue till I get my breath and work out these inquiries. Meanwhile I wish to have you print another ad, which I enclose on separate sheet.—H. H. Burns, Sumner County, Kas.

THE GREATER AMERICAN ROYAL.

Beginning 14 years ago as a show of Hereford cattle, the American Royal Live Stock Show has made a steady growth until this year it will include 23 breeds and classes of live stock, beside a score or more breeds of poultry. Every breed or class that has been added during that time has come in, not at the solicitation of the "Royal" management, but as a result of the desire and efforts of the people interested in that particular breed or class. No more sincere or significent compliment could be paid to the management of this real live stock exposition, or to Kansas City, as favorable point for exhibition.

During a dozen years of acquaintance with the breeders of Nebraska, Kansas, Iowa and Missouri, the writer has many times heard the statement that a better class of people and a higher percentage of prospective buyers visit the stalls and pens of the American Royal, than are encountered at any other of the fall shows. This, we believe, is the natural outcome of holding an exposition exclusively for live stock, at a great live stock center, and at a time of year when stockmen can most conveniently attend. And great as the American Royal is, it as yet, nowhere nearly measures up to the possibilities of its location, its season and the character and importance of the men and interests back of it.

But this year's "Royal," (the fifteenth annual) is to be, as we have suggested, by far the greatest. Among the 23 breeds and classes of live stock to be shown are four breeds of draft horses, mules (two classes), and most classes of drivers, saddlers and work horses; five breeds of cattle; four breeds of hogs; five breeds of sheep and all the standard breeds of poultry.

Perhaps the most gratifying feature of the growth made by this year's show is in the class for mules, under the superintendency of W. A. Elgin. The entries already in last week indicated about three times as many mules as were shown last year. The night horse show, entries in which do not close until October 1, already has reached a record point. Superintendent Trowbridge reports entries from Kentucky, including ten of the best horses in the Bluegrass state, and these come in addition to the best stables of Missouri, Kansas and Iowa—stables like those of Judge Mooers, Miss Long, Houchin & Anderson, Urich Bros., and others.

But even more gratifying to our thousands of readers chiefly interested in improving the farm horse stock of this country, is the growth (in the right direction) which the draft horse show is making. The number and excellence of small exhibits will be more noticeable than ever before, and there is nothing which will so much encourage new men to start with better horses, and older breeders to give their horses better care. One of the highest class exhibits will consist of only five head, representing three draft breeds. One of the best grown yearlings out this year has been entered by a young man who has nothing else to show. Never before has the draft horse section of the Royal represented so many localities and firms in what is strictly Kansas City territory, which means that this year's exhibit will arouse a greater popular interest than any previous ones have done.

The importers, as well as the breeders, whose animals will comprise the display, are men identified with the business in this territory and in position to sustain the interest in their respective sections, which their exhibits are bound to arouse.

It is through this sustained interest that any fair or stock show must do its greatest good—and through this the "Royal's" influence will be more far reaching than ever before. The dates are October 6 to 11.

UHLAN PERFORMS AT MINNESOTA FAIR.

By special arrangement the champion trotter, Uhlan, 1:58, gave an exhibition at the Minnesota State Fair. Rain had interferred with other engagements which were held over to September 5. This was the big day of the racing meet; a very strong card was given, making it a big day for lovers of harness horse racing.

During the afternoon this great gelding, Uhlan, was warmed up for his race against time. A large audience greeted him with cheers after it was learned that this distinguished race horse was in their presence. Uhlan is a very handsome horse while moving; his head and tail are elevated and he does not require a lot of apparatus to keep him at his work. He was accompanied by a runner, a few lengths behind him, in order to stimulate and encourage him to great-

UHLAN 1:58 IN ACTION.

er activity. The crowd was expecting something wonderful but not many were expecting that Uhlan would make as low a record as he did—owing to the track condition.

After he had scored once Mr. Tanner announced that at the next time down it would be a race against time. When the judge introduced this distinguished company to the audience it was not the first great introduction this horse had received, as he had performed before "crowned heads" in foreign countries. He seems to understand his distinction. When he goes up the stretch to make a start he seems to wait and turn very slowly, giving the audience plenty of time to fully comprehend what it all means.

With a good, fast start the first quarter was reached in 30 seconds; the half in 59¾ seconds; the three-quarters in 1:30¾ seconds and the mile in 1:59¾ seconds. When the timer indicated the time as 1:59¾ a great cheer went up and a new record was established for the Minnesota fair's mile track.

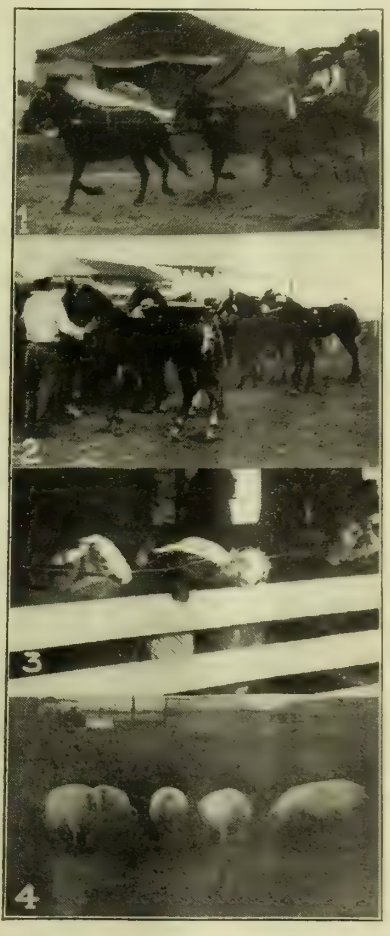
Questions and Answers

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading, free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best autherities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

542—BURSATTEE—I have a three year old Percheron stallion that has a sore on the end of his penis, at the termination of the canal, and since this sore appeared there is a swelling around the navel. The sore is raw and sticks out at the end about one-half inch; looks like proud flesh; is not sore. I have taken out small particles of hardened flesh. Urine is expelled in a thin stream, and in jerks. I think this horse masturbates some, though not enough to injure his breeding. Has been in this condition about eight days and I have not used him any. Have injected borax water and applied carbolated vaseline. Please advise treatment.—Kansas Subscriber.

REPLY—Your animal is very likely affected with bursattee, a disease caused by infection from contact with flies. Treatment should be in the line of removing the growth by surgical means and an application of a caustic to the parts. We do not deem it wise for one of your experience to undertake at least the first treatment necessary in a horse of value, such as you no doubt possess, but this matter should be referred to a competent veterinarian who in one or two visits should put the case into shape so that you can doubtless handle it successfully.



543—WOUND—I have a mare that got in the barb wire and took a slice of skin and flesh from her ankle down to the hoof and the top of the hoof an inch or so. The sore is about three inches wide and about four inches long. What is the best liniment to put on? I have used four different kinds and they did not help. The mare is a three-quarter Shire; four years old and weighs about 1350.—Colorado Subscriber.

REPLY—We fear if you have been using treatment of a stimulating nature that by this time the granulations have become excessive, and in the process of healing the skin is not forming over the wound, which if not corrected soon will ultimately lead to an excessive blemish. All granulations above the adjacent skin margin should be removed down to a level with the skin. No doubt you had better employ a qualified veterinarian to do this for you. If the granulation is not excessive it is quite likely that the daily application of burnt alum to the wound will be sufficient. Following the use of the alum one often gets good results from a solution of sugar of lead, using two ounces to a quart of rain water, and applying the solution three times a day.

544—CHRONIC LAMINITIS—Can you give me a remedy for my jack? He became foundered two years ago and still walks badly in his front feet. The junction between the sole and the wall has given away and the sole has gotten too low down; I have to keep it cut out. Shoeing with iron bar shoes does not seem to help him.—Mississippi Subscriber.

REPLY—It is impossible to entirely cure a case of chronic laminitis that has become as bad as the one you describe, and all that can be expected is sufficient relief so that the animal may comfortably get about and be used for breeding. First the feet should be softened and the inflammation reduced by standing in cold mud. In arranging such a mud bath for the feet be careful and not lower the front of the animal too much. Allow the animal to stand in the mud for two or three hours at a time and then take him out and give him an opportunity to lie down and rest for a couple of hours, at the end of which time he should be put back in the mud. Have him shod with heavy bar shoes, covered so as to not rest on the sole and made with a wide web so as to protect as much of the sole as possible. The animal should be shod as short as possible in front with roller motion so that he can go over easy. A long shoe is a great mistake on an animal of this kind. Stub the toes off decidedly. We fear you have made a mistake by repeatedly thinning the sole as such practice is inclined to cause the bulging complained of. The application of a blistering agent every three weeks about the coronet will stimulate a more healthy and vigorous growth of the horn and will be helpful in overcoming the lameness. After the mud bath the hoofs should be annointed daily with oil of tar and vaseline equal parts to prevent drying out. If you expect any good to come from treatment you must be patient and persist in a systematic way.

545—INJURED FOOT—I have a two year old that has been running in pasture with other horses. About ten days ago I noticed he was lame. I examined his foot and found a little sore on the foot at the top of hoof on the back part of the foot—the front foot. I took him to the barn and treated it with burnt grease. He got better, but is worse now. The back part of heel is cracked each way from the center; he has a high fever. It looks like his hoof would come off. What is the trouble and what can I do?—Arkansas Subscriber.

KANSAS STOCK SHOW CORNERS.

1—Pony tandem at Topeka; 2—Lining up Percheron colts, Hutchinson; 3—Persianaro sheep, Hutchinson; 4—Sidney Frost's Chesters on a sunset stroll.

REPLY—Your description is that of an animal that has suffered from a punctured wound of the foot, and the exudate or pus has separated the horny parts from the sensitive parts beneath. Soak the animal's foot in an antiseptic solution using a three

(Continued on page 13.)

THIS ABOUT SORGHUM POISONING.

To the American Breeder: — If farmers are careful to feed only sorghum hay which is thoroughly dry there will be little danger of prussic acid poisoning. That is the advice of veterinarians at the Kansas Agricultural College who have investigated the trouble many farmers are having in feeding cane, kafir, and milo as roughage. If silage is to be made of these crops, allow them first to dry and then if it is necessary, water may be added as they are put into the silo.

After a long drouth or when growth is stunted from other causes, the leaves of the sorghum often contain a large amount of prussic acid, the veterinarians say. It requires only a small amount of this acid to kill an animal, and death frequently comes soon after the sorghum is eaten. Prussic acid does not appear in appreciable quantities in a normal growth of sorghum crops and it so largely disappears when the crop is dry that cured sorghum hay may be fed with safety. To be on the safe side farmers, when in doubt, should try out the feed on a few animals. If no bad results occur within 24 to 48 hours, the feed may be considered safe.

A strong solution of glucose, which nearly every farmer has at hand in the form of "corn syrup," or molasses, may be administered as an antidote to animals that have been stricken after eating the hay. Large quantities of milk may also be given with good effect. Another effective antidote is this: A solution of 100 parts of sulphate of iron is mixed with 250 parts of water. Fifteen parts of calcined magnesia is mixed with 250 parts of water. These two solutions are then mixed and given to horses or cattle in doses of 10 to 40 ounces. In all cases the animals should have as much fresh air as possible.—Kansas Agricultural College.

HIGH PRICES FOR THOROUGHBREDS.

The revival of racing and the "loosening up of the racing game" in many places, has again boomed interest for thoroughbreds. At the recent dispersal of one of the most famous thoroughbred studs of America, the stallion, Uncle, sold for $34,500 ;the stallion, Superman, sold for $10,500 and several other animals brought from $2,000 to $4,000 each. These prices put the thoroughbred business where it properly belongs, for it is a millionaire's game and not a business in which many can afford to embark.

WANTS A JENNET SHOW TOO.

To the American Breeder:—I wish to say that the American Breeder "Jack Show" has been a very interesting show and study to me and no doubt has been so to hundreds of other subscribers to the American Breeder. I would be pleased to see the show of jacks, jennets and mules go on in the American Breeder. Could I see the six "short cut" jacks in their true form, style, action and general make-up, I might place them much different than what I have done in coupon, from measurements and photo. I would like to see the winning jacks in this show come out in a new photo in another show; would also like to see a jennet show.—A. C. Briggs, Harrison County, Iowa.

BRIGHT BOY.

Farmer (on one side of the hedge, to boy on the other side): Now, then, my lad, didn't I tell you not to let me catch you here again?

Boy (preparing to run): All right, don't make a fuss. You ain't caught me yet!

SCIENTIFIC BREEDING.

A writer mentions the fact that at the army breeding station wonderful results have been obtained. At the close of business on August 16, 1913, 41 stallions were in service; these stallions covered 1452 mares during the season, an average slightly over 35 mares per stallion. Twenty-seven of the stallions were five years old or over; 10 were four years old and four were three years old.

Out in Kansas a small breeder has bred nearly 800 mares to three stallions, two of these were 3-year-old colts. This same breeder has been averaging from 70 to 80 per cent for the last two or three years. A lot of colts by the aged stallion and out of grade mares have been selling for from $100 to $150 each at weaning time. The aged stallion made only one service a day; the three year olds made only three services a week.

This is not an isolated case as a lot of breeders can be found who have done about as well. With this government breeding proposition an unnecessary lot of money has been used in purchasing stallions, feed and help. The government is not the only one that has been extravagant with expense money. There are a lot of breeders doing exactly the same thing. We expect to be able to announce within a very few years that 500 mares will be a common number for an outstanding sire. This is possible and all that is required in establishing these large records is for men to purchase good enough sires and study the breeding problems.

It is not the large number of mares covered that nets the revenue; live spermatozoa must be deposited in the uterus of a clean, healthy, normal mare in order to bring results. The average breeder is annually breeding a lot of mares that do not have any show of getting with foal. Every one of these mares costs the breeder money, both the owner of the sire as well as the owner of the mare. There are a lot of diseased mares that are being bred that transmit infection to clean, healthy mares, causing them to be non-producers. The biggest thing in horse breeding for the average breeder is to be able to thoroughly diagnose breeding conditions. This is especially true and important for the stallion owner who employs only the natural service in his breeding operations.

MORE GRAIN AND HAY THAN IN 1911.

If one should make the statement in the hearing of almost any average street corner crop expert, that the United States raised this year a billion bushels more of corn, wheat and oats than it did in 1911, he would be almost certain to start an argument.

So serious has been the drouth just closed, and so wide-spread the publicity given it, that a great many people, well informed and otherwise, have lost sight of these facts, viz., that most of our winter wheat was made before the drouth began, and that most of our spring wheat and oats areas, and some of our corn areas, lay outside of the drouth region.

In spite of the fact that the condition of corn in Kansas was cut down, down, down until it was reported September 1 as low as 10, in a possible 100, the government estimates dated September 1 placed the probable total crop of corn this year at 2,351,000,000 bushels. This is a shortage, over a year ago of 762,000,000 bushels. But in 1911, a short crop year, not thought of as anywhere near so serious as this year, the corn crop was only 2,531,000,000 bushels, or 180,000,000 bushels (7.1 per cent) more than the estimate for this year.

In 1911 the total crop of wheat, spring wheat and winter wheat combined, was only 621,000,000 bushels as against 753,500,000 bushels this year, or a difference in favor of 1913 of 132,500,000 bushels. The spring wheat crop, which improved during the past summer almost up to harvest time, had a good deal to do with this excess; likewise the late oat crop (that is the oat crop of the northern states), has been a big factor in making the total yield of corn, wheat and oats 1,100,000,000 bushels more than it was two years ago.

The oat crop this year, based on reports September 1, amounts to 1,066,000,000 bushels. In 1911 the total oat crop was 923,000,000 bushels, or a difference in favor of this year of 143,000,000 bushels.

There is another factor which we are likely to overlook in getting at the true state of affairs with reference to our food supply for man and beast, and that is our tame hay crop. Practically all early tame meadow in this country was good; the first cutting of alfalfa is generally conceded to be a record breaker, and the second cutting yielded a good crop of hay generally excepting where it was allowed to ripen for seed.

Early clover meadows generally, where not pastured, were exceptionally good. As a result of this, and in spite of the fact that over a very large area there has been one hundred days of mighty poor hay weather, the tame hay crop of the United States is now given as 63,000,000 tons. In 1911 the tame hay crop was 55,000,000 tons or about 8,000,000 tons short of what we have this year.

FALL BREEDING SEASON.

Most breeders will usually find that that a fall breeding season is profitable. There are many mares that can be settled in the fall that will not settle during the spring months while the weather is unsettled and they are being worked hard while shedding.

A fall season is especially necessary this fall in sections where it has been very hot and dry. Many mares have lost their colts owing to the scarcity of water and the intense heat. An early abortion of the accidental kind does not usually cause much disturbance and they might be bred at this time if the mare has healed up satisfactorily. Each of these mares should be examined; some of them will need treatment before being bred. Such mares could be bred with a capsule, as a rule, with more safety.

A breeder should have a complete mailing list of all the mare owners in his section. A printed postal card could be sent to these men, at very little cost. It is not necessary that the breeder stay at the barn all of the time; the postal card notification will give the exact hour when services will be made. It is not necessary that he advertise a service every day; once or twice a week might be sufficient. If the capsule system is not employed, dates could be made for other mares that are in a breeding condition. This notification might also request all the barren mares to be there at a particular time, and arrangements might be made also for a qualified man to treat such animals as was found necessary. A few services occasionally will not be injurious to the sire and it might put some mares out of the way so that they would not be returning every three weeks during the busy season.

In fact, all breeders might find it profitable to encourage a particular hour for breeding. It is not necessary to "camp" at the barn—even men in the breeding business, are entitled to some freedom. Many of these men have other business, so that it would be impossible for them to be there constantly. A number of prominent breeders who have adopted the capsule system have also adopted a special hour for the breeding operations. They have caretakers for their stock, so that it is not necessary for them to be there except at the advertised hour. The breeding business is getting to be more of a science and more of a business, which is very interesting for those who care to make it a special study, as well as more profitable.

A fall breeding season offers some practical work and an opportunity to carry on experiments.

STALLIONS AND JACKS WANTED.

One of our readers who is in the market for a registered draft stallion and jack, writes us asking why those having such stock for sale do not advertise it early. This breeder, as well as many others, wishes to correspond with those who have breeding stock for sale. At the state fairs and other gatherings where breeders have been present, it is generally understood that the inquiry for breeding stock is better this fall than it has ever been before at this time of year. Even in the dry districts where the crops have been very short, breeders state that many farmers now see the necessity of raising good stock and not depending entirely on a particular grain crop.

Some few have been forced to sell their stock but in nearly every case they have received good prices. This stock has been accumulated during years of plentiful feed so that when a bad year comes and there is a surplus of stock to be disposed of, it nets a good and welcome revenue. Breeders and farmers are thinking for themselves about better stock.

Another reader who has stock to sell writes inquiring concerning the distribution of our circulation. He is wondering if practically all of our circulation is in Kansas and Missouri. There are four other states in which we have a larger circulation than in one of these states. We have more subscribers in the state of Illinois than in any state, excepting one, and Iowa ranks third. Our circulation is national. Wherever good stock is found you will find the American Breeder present. Fortunately we do not include in our following any crooks and owners of scrub stock.

The advantage of advertising in this paper is that practically every reader is a possible buyer of good stock—nearly every one will be in the market sooner or later for stallions, jacks or registered mares. We have proven beyond a question of doubt that we can give more results for draft horse and jack advertisers, for the same amount of money, than can be gotten elsewhere. But the principal thing we are interested in is to encourage advertisers to start early. We have always advocated the purchasing of breeding stock early. Buyers cannot do business unless they can find stock to buy. We hope those having stock to dispose of will send in their ads early and not put it off until the next breeding season is well advanced. Do it now.

A one inch advertisement on insertion will cost $2.80. From 50 to 60 words can be placed in an inch of space, owing to the size, and the kind of the type. Send your advertisements now for the buyers will be looking for them.

STANDING A BULL WITH STALLIONS.

The average stallion owner does not think of the possibility of standing a good bull for public service. A good registered bull can be purchased cheaply enough so that it should pay for itself easily in two or three years. An animal of this kind is not very difficult to handle and should not interfere with the other work.

Cattle prices are higher and the demand for improving blood greater, than the average breeder thinks for. A two year old heifer of good size and fairly well bred, safe with calf will sell on the market for from $50 to $80 without any "papers." In many localities good milk cows have sold as high as $150. Why is it not profitable to look after this part of the breeding industry? Breeders who have studied only the horse end of it may lose a good opportunity by not thinking about the cattle market.

A good bull should stand for around $5 in most localities. In some localities where there are many pure bred cows, the service fee might be advanced. A lot of breeders have an extra mongrel stallion that they could dispose of and place in its stead a good bull very profitably. The mares coming to this mongrel stallion could be transferred to better sires, or at least a part of them. The bull would open a new field. An enclosure separate from the bull's habitation would serve as the breeding paddock. A bull, properly handled, can be brought in with a lead strap (in case of some dairy bulls a "jockey stick" is considered necessary) released to make the service, and caught without trouble for returning to its paddock.

Some cow owners will need a little education and enlightment as to the value of better progeny. A calf sired by a good, purebred bull is worth at weaning time from $5 to $10 more than one sired by a scrub. Those who expect to raise cattle and increase the quality of their herds cannot measure the value of a good sire in dollars and cents. A further advantage in using a good bull is that one owning a calf sired by a good animal will not be forced to hunt for buyers. Nearly all live stock buyers are now hunting for the best and a few dollars in the price does not usually interfere with the transfer.

In some localities, a breeder, thinking of standing a good bull, will find several owners of good cows ready to cooperate with him. It is often the case that men owning a limited amount of land, and desiring to keep a small herd of choice pure bred cows, are held back because of the cost of a bull suited to their needs. If a breeder can find two or more farmers, so situated, and keeping the same breed of cows, he very likely can get them to join him in selecting a bull, which all will be glad to patronize. This same problem has given rise, in some sections, to cooperative breed-

American Breeder Camera at the Kansas Fairs

State Fair—Lee Brothers' Percheron Mare, Marceline, in Action.

State Fair—G. E. Clark's Champion Galloway Cow.

State Fair—Hill's First Prize Two Year Old Mule.

Topeka Fair—Lew Jones' Champion Belgian Stallion.

Topeka Fair—Adam Becker's First Prize Mule.

Topeka Fair—Kirk & Penick's Champion Percheron, Insolent.

ing clubs, and doubtless there are many places where progressive, capable breeders can work out a better solution of standing the right kind of a bull. This plan, properly followed, with either beef bred or dairy cattle, could soon give any favorable locality a reputation for a superior class of young stock.

HOW MANY QUESTIONS THIS YEAR?

How many questions have you seen asked and answered this year in our "Question and Answer" department? An average of 30 to 35 questions per issue, or considerably over 500 questions since the year began, and in addition to these, many questions have been answered outside the department, in the form of more extended articles.

If you want to know the exact number answered, turn to our "Question and Answer" department in this issue and you will find the opening question bearing the next number in the series. From this on the questions handled in this department will be numbered, a new series of numbers being started for each year. One reason for adopting this plan is that we want our readers to use these numbers in making reference to a case. Many cases are brought out in this department which should be studied. Repeated reports should be made on them, and all should note their progress under the treatment advised. Complete files of the American Breeder.

Often the first question does not describe the trouble, or the surrounding conditions thoroughly enough to make a complete answer possible. If the trouble continues, a second and more completely prepared inquiry should be sent. In all cases, whether a report of progress or a second inquiry, or if for any reason a previous question is brought up again for discussion, the inquirer is now requested to give the series number of the question.

If, in the course of its discussion, the matter has been brought up twice, give both numbers. Keep the papers always on file so you can refer to past issues.

In this way we believe a great deal more can be learned from the more important questions. Making such a study and use of the "Question and Answer" department will be the next thing to having the actual practical experience in all such matters. Not merely the one man who asks the question, but the thousands who have had, or are liable to have, the same situation to meet, are benefitting almost equally. Keep this in mind. Your questions are always welcome, and if our first reply does not give you the help you need, come again. You are not only getting what we want you to have, but you are bringing out information that is useful to thousands of fellow breeders.

STALLION OWNER COMPLAINS.

A subscriber complains that we are not giving enough space to stallions. He states that he is not interested in farmers or their problems. He also states that it is a waste of time and money to print material concerning any other kind of stock except stallions.

If this man's territory was investigated, in all probability there would not be found a close union between him and his customers. This man perhaps is very much aggravated to think that so many farmers in his section would patronize the inferior stock and pay so little attention to their mares. It perhaps never occurred to this man that the mare owners should be the principal ones interested in horse breeding. They practically control the situation. As long as they continue to switch from one scrub to the other, the quality of horse stock will not be improved. Just as long as they abuse the mares and do not get more familiar with modern breeding methods, the per cent of foals will not increase, but decrease.

This individual perhaps has never looked at the breeding problems from a broad view standpoint. Farmers and mare owners generally are not as much interested in stallions as they should be. But a good live paper coming to their place with a lot of useful information in it for them will cause them to read and study such matters closer and gradually get them interested in horse breeding. Every stallion and jack owner should take a broad view of this situation. The American Breeder prints more reliable up-to-date information on horse breeding subjects, in plain language that can be understood by the average breeder, than can be found in all other printed literature. So long as this fact is thoroughly understood no stallion owner should object to having a reasonable amount of additional interesting reading for the mare owners printed in his paper.

This selfish disposition must gradually give way. A breeder must be a leader in his community and in order to be a leader he must have a broad mind; he must be a student and be prepared to give value received in order to maintain or increase his business. He should cultivate harmony between himself and his customers; they should be the very best of friends and he should have their confidence. It is true that there are jealous individuals in every community but that disposition usually tends to restrict the followers of its owner. No breeder can have that disposition and expand as he should.

Every individual in the breeding business should endeavor to increase his successful patronage each year.

No More Scalded Shoulders

Don't lose time and money because of sore shoulders. Don't pay out money for Hames and Sweat Pads Try a pair of Indestructible

Hameless Adjustable Metal Horse and Mule Collars

Endorsed by veterinaries and men of high authority. A. F. DeLaune, St. Thomas Plantation, Albemarle, La., writes: "Send me forty steel collars."

Think what that means to the horse owner. Think of the time saved—money saved and suffering saved the mules. Think of the extra work you could do with a collar that insures against galls and sore shoulders. Be humane, progressive and up-to-date and save money by using

Indestructible Collars

and you'll be free from sore shoulder troubles. The metal won't permit the sweat to scald and produce a sore. Being adjustable they fit the neck and bring the draft to correct point. Durable—last a lifetime. The ideal work horse and mule collar. Be sure and test out this great Twentieth Century invention—10,000 in successful use. Good Agents Wanted. Manufactured by

Johnston-Slocum Co., 933 State St., Caro, Michigan

In the average territory some good, substantial customers are constantly leaving. In order to maintain the same number an effort must be put forth to make up for the lost patronage. The breeder who does not make this effort will find himself with a very small patronage in a few years, which means that he must retire.

There is no other occupation more profitable for the average individual (considering the investment), than the breeding business. But this business is the same as any other—it must be looked after. Friendships must be cultivated. There is perhaps no better way to have a mutual understanding of all breeding subjects than to have all customers reading the same literature, and in order to make that literature

of interest to others, it must necessarily contain some information besides that relating to stallions only.

PROTECTION TO BREEDERS OF LIVE STOCK.

Under the above head, the U. S. Department of Agriculture has recently called attention to the manner in which its Bureau of Animal Industry helps to protect buyers of breeding stock, from possible misrepresentation concerning imported animals. These facts have been printed before in the American Breeder, but our readers will find it worth while to look them over again, as sent out over the signature of Assistant Secretary of Agriculture B. T. Galloway. Here they are:

Since January 1, 1911, the Department of Agriculture has been safeguarding the interests of breeders of pure-bred horses in the United States in such a manner that there is no longer any excuse for the purchase of a stallion or mare as an imported one which is not actually imported.

The foreign (including Canadian) certificates for horses of the various recognized breeds imported for breeding purposes are submitted by importers to the Bureau of Animal Industry. The pedigrees are verified from the stud books, and the description of the animal on the pedigree certificate compared with that reported by the bureau's inspector at the port of entry. If descriptions and pedigrees check up properly, the pedigree certificates are stamped in red ink. This stamp carries the statement that a certificate has been issued by the Bureau of Animal Industry, the date of issue of such certificate, and the department's serial number for the particular breed. These bureau certificates give custom-officers the data on which animals are passed free of duty under the provisions of the tariff act.

Farmers and breeders are cautioned not to purchase or accept any stallion or mare claimed to have been imported since January 1, 1911, unless the foreign pedigree certificate for the animal offered for sale is stamped as above described. If the certificate does not bear this stamp, either the pedigree is not correct, or the description fails to agree with the animal, or the animal was not imported since January 1, 1911.

This same procedure is followed in the case of cattle, sheep, and hogs, although in some instances, notably in the case of sheep, a number of importers have preferred to pay the duty, which is comparatively small, rather than take the trouble to get certificates of pure breeding from the department.

DON'T SELL THE BETTER COWS AND HEIFERS.

E. G. Bennett, State Dairy Commissioner of Missouri, says: "It seems that stock in some sections of the state is now, or will, during the winter suffer for want of feed if not disposed of. If sold on account of feed shortage they are almost sure to be sold at a great sacrifice, causing a loss not only to their owners but to the stock industry of the state also. It is up to the business men and farmers to stop these sacrifices and it can be done through cooperation and by putting forth some efforts.

"In 1911 Wisconsin suffered a drouth. Hay sold for $25 per ton, and many cattle buyers took advantage of these conditions and bought cows in that state for far less money than they were worth. Before it was too late the bankers and business men got together and arrangements were made whereby train loads of feed were shipped into the state and turned to the farmer at actual cost, not only stopping the sacrifices but keeping in the state an asset no state can afford to lose. In 1909, New England also suffered a drouth and hundreds of milch cows were shipped from those states causing a great loss to cow owners and the dairy industry of that country. Wisconsin surely profited by the experience of New England.

"There is no doubt there are many cows in Missouri that do not pay for their feed. This class of cows is a source of expense any year and well sold at almost any price. But good, profitable cows and immatured heifers should not be sold for less than their true value ,if at all.

Market Conditions Changed

Rains Checked All Runs. Best Horses Stay High. Fewer Mules Will be Fed. All Cattle Up, Especially Good Beeves and Stockers. Packers Fighting Hog Market.

The quality line is drawn strongly in the horse and mule trade. The demand for the good kinds is keeping well ahead of the supply at firm prices, and the trade in the plainer kinds is very indifferent. The first ten days this month a good sized dry weather run developed, and the common kinds were more plentiful than at any previous time this year. Rains, however, checked the movement, and while a good many common kinds are sticking around, prospects are that the forced movement was nipped at the beginning. From Chicago, East, demand seems to be more insistent on quality than at any previous time.

City trade is falling more and more into the habit of paying high prices and demanding quality.

Chicago now has 72,939 horses at work, only 287 less than a year ago, and they probably represent more money. In Cincinnati the decrease is only 153 head for ten years and Minneapolis and St. Louis have increased.

The principal farm work now is fall plowing and seeding, and farm requirements of horses is larger now than earlier in the month. Much rough feed will be made available by the recent rains and more horses will be held through the winter than expected a few weeks ago.

Feeder buyers are not taking hold of the trade as freely now as a year ago. Their contention is that thin horses are too high and feed too scarce for furnishing animals for the spring market. In the mule feeding districts in Missouri feeding operations will be cut in half, as compared with a year ago, but last season was the largest on record. Under existing conditions it is quite evident that those who do condition horses and mules will meet good prices.

Georgia has a big cotton crop this year. Last year they bought few mules and this year they are expected to live up to crop conditions and buy freely. August cut the cotton crop short in much of the South and prices have been going up steadily, so that it is quite probable that this year's crop will bring in as much cash as last year. Dealers say that the increased acreage to be prepared for next year's cotton crop will demand large horse power.

The general situation holds more to encourage than discourage owners and breeders of good equines, and the one who raises the right class is going to meet a ready demand for some time to come.

The following quotations are for serviceable sound horses and mules 4 to 7 years old:

Horses—	
Draft, choice, 1,600 lbs. up	$275@325
Drafters, fair to good	185@265
Chunks, good to choice	165@2.00
Chunks, fair to good	130@165
Expressers and light draft	85@150
Plain workers	50@ 85
Southerns, good	160@185
Southerns, plain to fair	85@155
Plugs	20@ 60
Mules—	
13 to 14 hands	$ 90@110
14 to 15½ hands	125@175
15½ to 16 hands	170@235
16 to 16½ hands	230@300

Norman Condition in Cattle Again.

After six weeks of abnormally high temperatures, dry weather, and an unprecedented movement of cattle conditions are returning to normal. The first week in September more than 95,000 cattle arrived in Kansas City, and receipts last week fell 32,000 short of that mark. This week will show a further decrease and then will begin to expand again in October. Copious rains last week and scattered rains this week brought the changing conditions, and while the market is still out of ordinary channels it will be only a short time until runs will be normal in every particular and trade show the usual fall stability. As soon as receipts lightened, prices began to improve and for strictly prime kinds the market now is the highest of the year, and the season considered, other classes are selling relatively high.

Thus far this season grass fat cattle have been a disappointment to killers. Only a few bunches have shown the usual summer quality and others have killed out 3 to 5 per cent below expectations. A good many Western cattle are coming now that were held on cotton seed cake during the dry weather, and they show fairly well in beef. In the past two days Texas and Colorado have begun marketing and the good grass in those states this season ought to insure good flesh on cattle. At no time this season will receipts again equal those of last week, but with only Kansas and parts of Oklahoma having marketed many cattle, liberal supplies of grassers are assured up to the first of December. On the other hand strictly prime beeves are scarce and will continue so. This week the top price in Chicago was $9.35, and in Kansas City yearlings sold as high as $9.30, and heavy steers up to $9.20, the years' highest prices. The bulk of the short fed steers are selling at $8 to $8.65, and grassers at $7 to $7.85. Some grain fed steers from below the quarantine line sold at $8.25 and the bulk of the cattle brought $5 to $6.25. The trade generally is expecting a wider spread in prices of killing steers. A material advance is due for full fed cattle and short fed grades will remain in about the same position.

Quotations for the various grades of killing steers are as follows:

Prime corn fat steers	$8.95@9.25
Good to choice steers	8.50@8.90
Fair to good steers	7.75@8.40
Common to fair steers	6.25@7.70
Meal fed, choice	7.65@8.50
Meal fed, common to fair	6 @7.50
Quarantine steers	4.50@8.25

She Stuff Scarce Again.

A good rain was the dividing line between abundance and scarcity in the she stuff offerings. In the past few days killers have not been able to keep ahead of their orders and country buyers kept digging into the supply at rising prices. Both country and killer buyers need the female offerings, and there is little probability of them being cheaper until demand is reduced. Countrymen would rather sell steers than heifers, and few heifers will go into feed lots this fall. Already killers are complaining that they cannot get full fed heifers, and the few good grass fat heifers available are the only substitute. Prices now are 15 to 25 cents higher than a week ago. Veal calves are in active demand at slightly higher prices. Bulls are 25 cents higher.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice	$6.25@6.85
Fair to good	5.25@6.20
Common to fair	4.75@5.20
Canners	3.85@4.70
Heifers—	
Choice fed	$8.25@9.00
Good to choice	7.75@8.20
Plain to fair	6.25@7.70
Common	5.25@6.20
Veal calves	5.50@9.50
Bulls	4.00@6.50

Enormous Stocker Requirements.

Now that the drouth is ended cattlemen are taking an inventory of their rough feed and as a rule find that they will have enough to carry some cattle through the winter. Consequently the parts of Missouri, Oklahoma and Kansas that were marketing so freely ten days ago are beginning to buy again. In the past ten days prices

Kerosene Engine

The SANDOW Stationary Engine runs on kerosene or gasoline. Starts without cranking—throttle governed—hopper cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—only three moving parts—portable—light weight—great power—15-day money-back trial. Sizes, 2 to 20 H. P. Send postal for free catalog.
Detroit Motor Car Supply Co.
52 Canton Ave., Detroit, Mich.

EASY TO OWN AN ENGINE NOW.

Among the most notable new literature in the gasoline engine business, is a very handsome, large-size circular in three color printing, just brought out by Ed H. Witte of the Witte Iron Works Company, Oakland Ave., Kansas City, Mo. The title of this is, "Own Your Hired Hand—It's Cheaper than Hiring." The text matter with rich illustrations, show, in a convincing manner, that a WITTE engine, using either kerosene, gasoline, gas, naptha, or distillate, is a competent "hand," suitable for any work that can be harnessed to a belt. For 27 years, Mr. Witte has done nothing but build WITTE engines. His catalogs and circulars, together with the prices he makes, show that he is a master at his business. Another thing that is brought out in this circular, which is of big interest to power-users everywhere, is Witte's new plan of selling only Direct from Factory to User, on easy payments, at no advance over the regular prices. This plan is devised so a WITTE engine can earn its own cost, while the user is paying for it. The striking part of the plan, is the really low prices that are made on all sizes of these engines, from 1½ to 40 horsepower, stationary, portable, skidded, or saw-rig styles. These factory prices mean a saving to purchasers of anywhere from $25.00 to $350.00, according to the size and style of engine selected—a six horse-power stationary engine, for instance, selling at $112.50 for the complete outfit, all ready to run as soon as unloaded at destination. Your name and address sent to Mr. Witte at his address as given above, will bring you one of these new circulars free, together with his Big New Catalog and Easy Payment Sales Plan.—Advertisement.

ENCOURAGING DEVELOPMENT OF DAIRY SHORTHORNS.

The American Shorthorn Breeders' Association has in many ways encouraged the development of the well known milking qualities of Shorthorn cattle. One of the steps taken in this line was the remitting of the usual transportation fee in cows with records of over 8,000 pounds of milk, or on daughters of cows with such records. Sometime ago Wm. Rockefeller recorded in this country 30

160 ACRE FARM FOR SALE.

I have moved to town to take up the breeding business exclusively and will sell my farm located 4½ miles from town of two railroads, Missouri Pacific and Atchison, Topeka & Santa Fe. All bottom land; black sandy loam. Spring creek passes through middle of farm; two wells of good water in abundance; 40 acres in alfalfa, fenced hog tight; every acre first class alfalfa land; 8 room house; large cellar; good orchard; grade school; school wagon run by district. Two story barn with basement; lots of grain room; big hedge on outside lines. Farm well arranged for two 80 acre homes, or 240 acres of cheap upland pasture may be had in connection, making an ideal stock farm. Price, $10,000 if sold soon. Will carry $3,500 at six per cent. Address,

H. H. BURNS,
Argonia, Sumner County, Kansas.

RENTAL PROPERTY FOR PONIES

Owner will exchange good rental property, five room cottage, best residence portion of Kansas City, for Shetland ponies. Equity $1,250.
Box 192, Pawnee, Okla.

CATTLE, ETC.

GOOD SHORTHORNS.

Practical cattle for both beef and milk. Just the kind the farms of the country need, and with breeding and conformation to make show cattle if you want them. I show my breeding stock successfully, but no stock is ever crowded enough to hurt it.

Pleased to show stock, quote prices and answer inquiries at all times.
C. H. White, Burlington, Kas.

GREYHOUNDS, ALL AGES.

For sale. Also registered Poland China pigs. Will exchange 320 acres Stanley County land for small farm or hardware store.
C. Rovang, Draper, So. D.

(Continued from page 8).

head of newly imported dairy Shorthorns, many of them having the required record for the remittance of the record fee.

SORE EYES OF CATTLE.

To the American Breeder:—Infectious sore eyes of cattle most frequently makes its appearance during the summer months, although it may also occasionally appear at other times. The germs may be introduced into a herd by the purchase of animal suffering with the disease, but it is undoubtedly spread in other ways as it sometimes appears suddenly and without any known means of entrance to the premises.

As this disease is infectious it spreads from one animal to others, and sometimes runs through an entire herd. Its duration in one animal is from one to two weeks, usually about ten days, after which it has run its course and disappears. Although total blindness may result, the sight is not usually permanently impaired. Very often but one eye is affected, the other eye, if affected at all, shows the symptoms from several days to a week later.

The first symptom is a profuse flow of tears. Then the eye becomes very sensitive to light, and is kept constantly closed. Later the eyelids swell, and the discharge shows distinct traces of pus or matter. About the same time a white speck appears on the surface of the eyeball. This speck gradually enlarges and may cover the entire front of the eye, causing temporary blindness.

Treatment is inexpensive and easily applied. When begun in time recovery is hastened, and further spread of the disease is prevented. It is always best to confine the animals in a comfortable but well-darkened stall. Feed sparingly on cooling laxative foods. Give a physic of a pound of Epsom salts in two quarts of water to an animal weighing 1,000 pounds. Add half a grain of zinc solution and ten grams of boric acid to an ounce of distilled water. Use a medicine dropper to put a few drops of this mixture in the eye several times a day.—C. C. Lipp, Assistant Veterinarian, University Farm, Minn.

CANADA THISTLE CAN BE ERADICATED BY CLEAN CULTIVATION.

Many farmers in their efforts to kill the noxious Canada thistle abandon their efforts with success in sight and the thistles soon recover, says H. R. Cox, in Farmers' Bulletin No. 545, which the Department of Agriculture, Washington, D. C., has recently sent out.

The man is of far more importance than the method in eradicating this weed, which is a pest from Maine to Kansas and in the Pacific coast states. While the South is not liable to be affected, there seems to be danger of its spreading into the Rocky Mountain States. So serious and so general have its inroads proved that in 25 States the thistle is proscribed as a noxious weed and the law directs its killing or destruction in such a manner as to prevent the maturing and dissemination of seed.

Canada thistles can be eradicated in a comparatively short time with little or no loss in the use of the land provided the following rules are observed:

1. Deprive the thistles of their tops continually, thus exhausting the roots. The top of the plant serves much the same purpose as the lungs of an animal, so that if the plant is continually deprived of that it must soon die. There is no one best method of keeping down the tops. Each field must be handled according to circumstances. Usually some form of clean cultivation is the best either with a crop or by bare fallow.

2. Outline a systematic plan of attack.

3. Keep the plan in mind at all times and follow it faithfully.

Alfalfa, clover, the grasses, millet, sorghum, hemp, buckwheat, and small grains are all crops adapted to the purpose of smothering the Canada thistle. They restrict the top growth of the thistles by shading them and also crowd the roots. Alfalfa is probably the best for this purpose. The land should be occupied by such crops at all times so that the thistle may have no chance to recover. This method is of most value in giving the weed a setback which renders easier the work of clean cultivation which should follow.

The method of salting the thistles in pastures is adapted to small patches accessible to live stock, especially sheep. In their efforts to get the salt the stock nibble the thistles and trample them to death. It seems best to let them grow until they start to bloom and then cut off the tops close to the ground and apply a small handful of salt to each new shoot that springs up. Permanent eradication of this weed by plant poisons has not proved very practicable.

Thistles that occur on waste lands may be prevented from maturing if their tops are cut off just as the blossoming starts. Two cuttings a year are usually necessary to prevent seeding. Thistles in such locations, however, can be entirely eradicated if the work is thorough. Various types of cultivators euipped with knives or sweeps that are effective in cutting off the tops of Canada thistles are shown in the new bulletin by the department's agriculturist.

MARKET CONDITIONS CHANGED.

(Continued from page 8.)

have advanced 35 to 65 cents and are at the high level of the season. All previously dry sections will buy stockers, and Iowa, Illinois east, are taking feeders. Last week 42,000 thin cattle were sent back to the country from Kansas City, and in the first two weeks this month 85,000, which is nearly a normal country movement for the entire month.

The following quotations are for stock and feeding table:

Selected feeders	$7.50@8
Plain to fair feeders	6.25@7.00
Good to choice feeders	7.10@7.45
Selected stockers	7.50@8
Good to choice stockers	7 @7.45
Plain to fair stockers	5.25@6.95
Stock calves	5.50@8
Stock heifers	4.75@7
Stock cows	4.50@5.75
Milch cows	$35.00@90.00

Hog Market Unsettled.

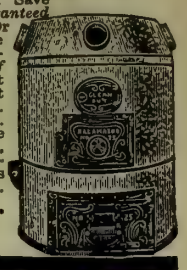
Packers are trying to reduce hog prices; shippers are sorting over the supply and taking what they want at a big premium. Between these two extremes the hog market has become unsettled and prices have fluctuated at a wide range. In one day prices broke 50 cents a hundred pounds and in the next two days recovered the loss. Wednesday last week prices were the highest of the season, with the top $9.60 in Chicago, and $9.10 in Omaha, and on Saturday the top price in Chicago was $8.80 and in Kansas City $8.30, thus in four days time the market covered the extreme price range of the season, going from the highest to the lowest points. Plain quality of the offerings has been one cause of the wide fluctuation in prices. Average weight is running 10 to 12 pounds below a year ago, and packers assert that current receipts are killing out about 3 per cent below normal which means an added expense of 40 to 50 cents a hundred pounds in the pork. Receipts have been liberal up to the beginning of this week, but rains have reduced that movement. A good many sick hogs are coming but general health is above normal. Opinion is divided as to the future trend in prices. Many believe that the scarcity of feed will cause heavy marketing in November and December, and others contend that those months will show a shortage. Packers say they do not expect prices to change much in the next few months.

The following table shows prices for hogs in Kansas City in the past two weeks.

Mon., Sep. 15.	$8.25@8.60	$8.40@8.95
Tuesday	8.25@8.77½	8.50@9.02½
Wednesday	8.30@8.80	8.40@9.00
Thursday	8 @8.87½	8 @8.60
Friday	8.20@8.70	8 @8.65
Saturday		7.90@8.30

The following quotations are for hogs:

Choice, 250@200 lbs.	$8.35@8.60
Choice, 200@245 lbs	8.45@8.70
Medium weight	8.20@8.75
Light weight	7.50@8.65
Common to fair	5.50@7.85
Stags	5.50@7.75
Boars	3.50@6.25
Pigs	4.00@5.50
Bulk of sales	8.20@8.60



Big Sheep Movement Started.

Last week more than 400,000 sheep arrived at the five Western markets and in the five days this week more than 425,000 were received. Omaha and Chicago are receiving more than three-fourths of the heavy movement which is principally from the Northwest. Demand has been good, and aside from fluctuations there has been no important price change. Killers are buying freely, and country demand is large thus far, but the movement has not been large long enough to fairly test the full extent of the country trade. The scarcity of feed will tend to reduce mutton finishing in the corn belt. The Northwest will feed considerable hay. Fat lambs are quoted at $6.75 to $7.25, wethers $4 to $4.75, ewes $3.75 to $4.55. Feeding lambs are quoted at $5.50 to $6.35.

Make Money With Poultry

AMERICAN POULTRY is a magazine devoted entirely to helping earnest men and women make a financial success of poultry raising. Its staff of writers is composed entirely of those who have made a practical, instead of theoretical, success of poultry farming, and who are glad to pass on the results of their hard earned experience to AMERICAN POULTRY readers.

There are many pit-falls in the path of the novice which may be entirely avoided by those who will follow the teachings set forth in this magazine. It fully explains how to make a start, how to construct houses, coops, and other devices, how to get a large egg yield, how to cure and prevent disease, how to exhibit, how to get the top price for eggs, how to use incubators and hundreds of other points which everyone wishes to know. It explains the famous secret system through which poultrymen have become rich and afterwards sold for hundreds of dollars.

AMERICAN POULTRY is a large, handsomely illustrated, monthly journal, well printed on fine paper, and should be found on file in the home of every poultry lover. No beginner in the poultry business should think of being without it. It will save him many times the small subscription price. The advanced poultryman will also find it of great value; the articles being varied in their scope.

SPECIAL OFFER. The regular price of AMERICAN POULTRY is 50c per year, but in order to introduce it to several thousand new readers, we will, for a short time, give a 200-page poultry book, which is a complete guide in the poultry business, ABSOLUTELY free to everyone sending 50c for a yearly subscription, or $1.00 for a three year subscription to AMERICAN POULTRY. A trial six months' subscription (without book) will be sent for 25c. Never has so much been offered for so small a sum. Advantage of this offer should be taken at once.

AMERICAN POULTRY

THE DANGERS OF DUST AND TOO MUCH SHADE.

To the American Breeder: It is true that any kind of dust is objectionable, but it is not equally true that all dust is dangerous to health. As an example ,the dust of ashes fresh from the furnace, range or heater, is annoying and may be irritating to the mucous membrane of the air passage, but ashes are bacteria free as they drop from the fire box into the ash pan, and unless these ashes are subsequently contaminated by spitting, or by the addition of other dangerous material, the dust from them is not a menace to health.

As dust is picked up from dry surfaces by air currents, it may come from a field, a travelled road, a gutter, an ash pile, a dusty rag or many other sources. Dust particles usually carry an assortment of bacteria, the kinds and numbers depending on the origin of the particle and the substances with which it has come in contact.

The length of time that dust particles remain in the air depends upon the presence or absence of air currents, and the size and weight of the particles. Under natural conditions the air is freed from dust and consequently bacteria by settling during quiet days and nights; by rain or snow, which collects and carries it to earth; or by coming in contact with damp surfaces. Air on the tops of mountains is quite frequently dust and bacteria free, largely because bacteria settle ;air over the middle of an ocean is often pure because of the extensive wet surface it has passed over.

There is a real danger to health in breathing dusty air, such as the contraction of pneumonia, catarrh and tuberculosis; but there is no way of estimating the extent of the danger, because it is not possible to know whether the dust comes from the gutter or roadside, badly contaminated, or from an open field. Sunshine disposes of most bacteria that are dangerous if allowed to act directly upon them for a few hours. So that dark alleys, gutters and shady spots are to be regarded with suspicion and should be sprinkled to prevent dangerous dust being removed from them.

Shade trees are prized very highly, yet it is certain that they are a menace to health, especially so when they completely shade a house. A house shaded from 10 to 4 ,only, probably is not overshaded, and is much more comfortable to live in in summer than one not sheltered from the sun.—W. R. Wright, Assistant Professor of Bacteriology, University of Idaho.

EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. **W. H. Fulcomer, Belleville, Republic County, Kansas.**

ARABIAN STALLION FOR SALE.

Color bay and white; 6 years; 16 hands; weighs 1000 pounds. Excellent breeder; sure foal getter; two-thirds of his colts spotted. Perfectly gentle and broke in all harness. Price, $400. Reason for selling, am quitting the business. **E. J. MUNTER,**
Vandalia, Fayette County, Ill. Rte. 3.

STANDARD BRED STALLION

For sale. Lightning Electrite No. 42353, by Electrite No. 10878; dam Edita; foaled in 1904; is 15½ hands; weight about 1100 pounds; bay with white feet; star and snip; nice quiet driver for women. City broke and a good saddler; sound and a good disposition. Would trade for young mules or mares.
W. F. BURNS,
Maryneal, Nolan County, Texas.

REGISTERED MORGAN HORSES.

For Sale—Weanlings to 3-year-olds, by The Admiral 4871 A. M. R., he by Jubilee De Jarnett. Send for catalog. **Richard Sellman, Rochelle, McCulloch County, Texas.**

CORN STALK DISEASE

To the American Breeder:—There is every indication that stalk fields and shock fodder may cause some heavy losses of cattle and horses this fall. There is no way to tell definitely whether or not corn stalk trouble will be widespread, but all those who contemplate pasturing stalk fields should be extremely careful about turning into them and watch cattle and horses closely.

The trouble following the feeding of corn fodder and the pasturing of stalk fields has heretofore been attributed to various causes, such as smut, worm dust, and the like. Experiments have shown these agents to be of little importance. Worm dust has been gathered and fed to horses and cattle, experimently, without producing any marked effect. Similar experiments have shown that the smut is harmless.

Where the Poison Is.

The explanation of the matter lies in the fact that when the growth of either corn or sorghum is stunted, there is developed in the stalk some deadly poison. The action of this poison resembles closely that of prussic acid. In all probability, there is formed in the stunted stalk a compound known as amygdalin which, during the process of mastication and digestion breaks up and gives off prussic acid, a most deadly posion.

Whatever the poison may be, it seems to volatilize or pass out of the stalks sooner or later, and generally stalk fields may be pastured without fear after January 1. As a rule, shock fodder does not cause any trouble after it is thoroughly dried and aired out. The danger from feeding fodder lies in newly cut up corn before the poison has had time to leave it.

It is advisable, therefore, that as much as possible of the corn should be cut up into shock fodder and allowed to dry out thoroughly before it is fed. Wherever the disease is prevalent, stalk fields should be abandoned until after January 1. Muzzle horses while gathering corn, and prevent them from eating any of the corn or the fodder. This may save a lot of horses. Feed the shock fodder rather lightly at first, and postpone its use as long as possible.

Symptoms.

The symptoms of corn stalk disease shown by horses, differ considerably from those shown by cattle. When the fresh cut shock fodder is fed to horses, it does not often product instant death. The horses affected by the fodder will show nervous weakness. Bloating is a common symptom resembling that of flatulent colic. Horses are fastidious about what they eat, and it is probably due to this instinct that they do not generally eat enough of the poisonous material to produce instant death. The trouble among cattle usually occurs when they are turned upon the stalk field or gain access to second growth sorghum. When they get only small quantities of the poison, their symptoms resemble those shown by horses. Extreme bloating in many cases sufficient to produce death, is a marked symptom. As a rule, however, cattle drop dead instantly, from paralysis of the nerve centers. They may be found lying dead in the stalk fields, or they may drop dead along the way as the herd is being driven to or from the pasture.

Treatment.

Treatment among cattle where death is instantaneous is out of the question. Those that are mildly affected and simply show bloating and nervous weakness, may be relieved by the use of trocar and the administration of a rapidly acting physic. Ordinarily, one and a half pounds of epsom salts given in plenty of lukewarm water will be the only thing available. In case of this disease in horses, a competent veterinarian should be called quickly.

We know of nothing that can be fed to horses and cattle as a preventative of this trouble. We will undertake to work out some formula that will counteract its effect.

We do not desire to cause a general alarm or the general selling of stock, and hope our prediction in regard to this trouble will not be fulfilled. Yet there is sufficient indication to justifl us issuing this warning.—D. F. Luckey, State Veterinarian, Columbia, Mo.

GOOD COUNTRY ROADS PAY FOR THEMSELVES.

The direct effect that changing bad roads into good roads has upon land value and the general economic welfare of a community is shown in several concrete illustrations gathered by the U. S. Department of Agriculture. The Department has just issued a statement on the subject, based upon a mass of information gathered by the office of public roads, which is making a special study of the economic effect of road improvement in the country. According to data gathered, where good roads replace bad ones, the values of farm lands bordering on the roads increase to such an extent that the cost of road improvement is equalized, if not exceeded. The general land values, as well as farm values, show marked advances, following the improvement of roads.

Among the illustrations cited by the department are the following:

In Lee County, Virginia, a farmer owned 100 acres between Ben Hur and Jonesville, which he offered to sell for $1,800. In 1908 this road was improved, and, although the farmer fought the improvement, he has since refused $3,000 for his farm. Along this same road a tract of 188 acres was supposed to have been sold for $6,000. The purchaser refused the contract, however, and the owner threatened to sue him. After the road improvement, and without any improvement upon the land, the same farm was sold to the original purchaser for $9,000.

In Jackson County, Alabama, the people voted a bond issue of $250,000 for road improvement and improved 24 per cent of the roads. The census of 1900 gives the value of all farm lands in Jackson County at $4.90 per acre. The selling value at that time was from $6 to $15 per acre. The census of 1910 places the value of all farm lands in Jackson County at $9.79 per acre, and the selling price is now from $15 to $25 per acre. Actual figures of increased value following road improvement are shown.

As the roads in no way affect soil fertility or quality of the farm, advances are due essentially to the decrease in the cost of hauling produce to market or shipping point. Farms are now regarded as plants for the business of farming, and any reduction in their profits through unnecessarily heavy costs for hauling on bad roads naturally reduces their capitalization into values. With reduced costs for hauling, profits are increased; with the result that the farm plant shows satisfactory earnings on a higher capital value.

The automobile also has begun to be an important factor in increasing rural values where good roads are introduced.

Immigration is particularly marked where road conditions are favorable; in fact, the figures of the Department seem to indicate that good roads indirectly increase the demand for rural property; and the price of farm land, like that of any commodity, is ruled by the relations between demand and supply.

Aged Stallions Wanted

I can use several sound, registered draft stallions, not over 8 years old, that have proven sure breeders. I will take such a stallion in exchange; at his real value as part payment on a young stallion. ***I have*** on hands, a lot of Good Imported and Home Bred PERHERON AND BELGIAN STALLIONS.

Public Sale of Registered Percheron Horses and Mares

I will sell at CHESTERFIELD, ILL., on Saturday, September 27, commencing at 1 p. m., the property of the late G. B. Loper, deceased, as the estate must be closed. Four Registered French Draft Stallions from 1 to 4 years old; 15 Registered Percheron Mares from 1 to 7 years old. These horses are all Registered and transfer goes with each sale.

MRS. MABEL LOPER, Chesterfield, Ill.
Admr. Estate of G. B. Loper.

BELGIAN MONEY FOR PANAMA EXPOSITION.

Unofficial advices have been received to the effect that the Belgian Draft Horse Breeders Association of Belgium have set aside $8,000 to be used in cash premiums for Belgian horses at San Francisco.

HOG LEGISLATION IN COLORADO.

To the American Breeder:—July 15th the law regulating and handling and transportation of hogs in Colorado went into effect. This law is in the interest of hog cholera control. The Secretary of Agriculture reports that sixty-six millions of dollars is a comparative estimate for the loss from this disease alone, in the last twelve months. Unless

YOU KNOW

that the really satisfactory breeding studs draw the trade that makes money. GET A GOOD ONE from my big bunch of registered Percherons, weanlings to 4 year olds. Breeder's prices. Spend a day and see my breeding mares and all. Cheapest early.

FRED CHANDLER,
Route 7, Chariton, Iowa.

STALLION AND JACK.

For sale cheap, one black grade Percheron stallion; six years old; weighs 1950 pounds. Also one four year old jack, 14 hands high. Both sound and all right. Colts to show from both. Reason for selling, have no help. For further information, address,

WM. H. STAHLHUT,
Alhambra, Madison County, Ill. Rte. 4.

10 PURE BRED PERCHERONS
for sale. Two stallions, 3 and 8 years old; two mares 7 and 8 years old; two 2 years old fillies; two yearlings, stallion and filly; two suckers, both fillies. All recorded in the Percheron Society of America; 16 other horses from suckers to 9 years old. Would take half cash, balance in good, desirable, clear property in central Kansas. For further particulars, address,
E. R. MANNING,
Bunkerhill, Russell County, Kansas.

IMPORTED AND HOME BRED STALLIONS AND MARES.
PERCHERONS, BELGIANS, SHIRES.
The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. **Address Hart Bros., Osceola, Iowa.**

IMPORTED BELGIAN STALLION
For sale; 8 years old; weight 1800 pounds in medium flesh. A sure foal getter and an extra good breeder. Was a prize winner in Belgium as a two year old in large show. Would consider good young jack or other good young stock as part pay. This horse is good enough to head any bunch of pure bred mares.
ADAM MATZ,
Carmi, White County, Ill.

SHIRE STALLIONS FOR SALE.
One, 8 year old black; 1900 pounds; one, 4 year old chestnut, 1800 pounds; one bay yearling, 1300 pounds; one black foal, 700 pounds. These are all my own breeding from imported stock; all sound and priced to sell.
J. E. McWherter.
Plymouth, Hancock County, Ill.

PERCHERONS, BELGIANS AND GERMAN COACH MARES AND STALLIONS
of all ages for sale. I have recently taken over the entire stock of horses formerly owned by the firm of Ives & Bellman and can furnish patrons with first-class breeding stock of the foregoing breeds. Have a fine lot of last spring's and yearling colts, as well as mature stock to select from. Address, **WILL BELLMAN, R. 1. DELAVAN, WIS.**

CLYDESDALE HORSES
Stallions and mares of all ages for sale.
Also Shorthorn Cattle.

Route 2, Plainfield, Ill.

150 STALLIONS.
Imported and home-bred stallions. I guarantee to sell you stallions for less money than any firm in America. Come to a Live Horse Market and see all draft breeds. Reference, any Bank in Creston. **A. Latimer Wilson, Creston, Iowa.**

MARES FOR SALE.
Seven head of good mares from one year old up.
E. L. VAIL,
Moffat, Saguache County, Colorado.

this new law is enforced to the letter we may expect that the loss from hog cholera next winter will be very heavy.

After July 15 one could not legally ship hogs into Colorado, nor move them within the state, without making affidavit (which must accompany the shipment) that they have not been exposed to the infection of hog cholera and upon reaching their destination (unless for immediate slaughter) they must be kept away from other hogs for a period of eighteen days.

The hog raisers of the state, and especially those in the Arkansas valley, are warned that if they do not wake up on this hog cholera proposition and systematically prepare to combat it, hog raising will be precarious business during the winter months.

After a loss of several hundred thousand dollars worth of hogs, the San Luis valley got busy and controlled the disease. Other infected localities can do the same thing. The new law will help, but it must be enforced, and there must be active cooperation. See how the San Luis valley did it.—Geo. H. Glover, Colorado Agricultural College.

QUESTIONS AND ANSWERS.

(Continued from page 5).

per cent of creolin. Following the soaking which should be done for three or four days, inject a five per cent tincture of iodine solution into the parts with a small pointed syringe. Keep the foot bandaged so as to prevent filth getting into the wound, or perhaps better place the animal in a clean well bedded box stall.

546—SENSITIVE SKIN—I have a horse that I think has bad blood. Every time he gets a scratch or skin rubbed off it makes a bad sore. What can I give him for his blood, or to put on the sores? It looks like proud flesh.—Nebraska Subscriber.

REPLY—Give the animal a month or six weeks' course of Fowler's solution, giving one-half ounce mixed with the grain three times a day. Locally apply a two per cent tincture of iodine preparation to the wounds three times a day.

547—ENLARGEMENT ON PASTERNS—I have a horse mule colt three and a half months old, weight about 450 pounds. Mare and mule run in pasture all the time. About a month ago a growth came on right hind pastern joint on outside at top of pastern; is hard and about the size and thickness of a silver dollar. Now the same kind of places are coming on fore legs at front and to inside of pasterns at top. What can be done to take them off?—Missouri Subscriber.

REPLY—Such enlargements are usually bursal in character and are not easily removed. Try the daily application of tincture of iodine to the parts for two or three weeks.

548—BLOODY URINE—I have a mare mule three years old, large and well developed; hearty and in good flesh, but she passes bloody urine, sometimes her water is nearly black with blood. I took her to a veterinarian and he gave me some powders to give her, but it doesn't help her any. She was broken to light work last year and has worked some this year. Whether running in pasture or working seems to make no difference. She is a valuable animal and I will be grateful if you will tell me what is the trouble and what to do for her.—Washington Subscriber.

REPLY—Inasmuch as you have access to a veterinarian it would perhaps be best to have him continue to care for the case. He should make a careful examination of the bladder as frequently these cases are caused by erosions or ulcerations of the mucous surface of that organ. If such is found to be the case, injections into the bladder of antiseptic and astringent lotions give the best results.

549—WARTS—I have purchased a black Percheron stallion two years old the 10th of April, 1913. His nose and mouth are covered with warts. They are from the size of a number four shot to a grain of corn. I had the veterinarians look at him and they say they never saw anything like it before. If you have a cure I would like to have it.—Indiana Subscriber.

REPLY—Numerous small warts, such as described, are best treated by snipping off with a pair of scissors and touching the parts with a stick of lunar caustic. It sometimes occurs that when the larger growths are removed in this way that the smaller ones for some unexplainable reason incline to disappear.

550—ABSCESS OF THE WITHERS—Would like for you to give through the American Breeder the best treatment for fistula. This one has been coming for two months and is about the size of a half gallon cup and is getting larger. It has not broke yet and is a little soft, not caked hard, and I cannot find a spot that looks like it would break anyways soon.—Indiana Subscriber.

REPLY—These are cases that usually require thorough surgical treatment, and as no two cases are exactly alike it makes it difficult for us to advise you in your particular case. We would suggest that the case be placed in the hands of a qualified veterinarian for treatment, inasmuch as we believe by so doing it will save you endless annoyance.

551—OBSTINATE WOUND—A neighbor has a mare four years old, which has a bad sore on the left hind ankle. What caused it I do not know. The bunch was very small when I first noticed it and first started on the outside, but now it is considerably larger than a man's fist and discharges pus at times and sometimes blood, and looks very red at the opening. The sore has healed at different times, but breaks open again. It first started about 14 months ago. The mare is very gentle and runs in a pasture most of the time. Have washed the sore with a weak solution of carbolic acid and put other remedies on, but each time it heals it breaks open again. The bunch is on the ankle and a little above. Any information that you can give will be greatly appreciated.—Montana Subscriber.

REPLY—The behavior of the wound indicates that there is perhaps some foreign body that is responsible for the wound not remaining closed. A qualified veterinarian should be called to examine this case and an examination be made for such foreign body. The body may be of the nature of a small piece of wood, a piece of bone or possibly merotic tendon or ligament. We think you are wasting time in attempting treatment until such examination is made.

552—ATROPHY FROM AZOTURIA—I have a stallion that had an attack of azoturia last April, leaving him with muscle above stifle badly shrunken. Would like to know of most effective agent that would encourage its restoration. Will his reproductive ability be affected? He covers mares as well as any stallion.—Wyoming Subscriber.

REPLY—Exercise is all important in restoring these shrunken muscles, and the best way to encourage the parts to fill out is to put him to actual work. He should be permitted access to a roomy lot where he will take as much exercise as possible. If he is in general good health this experience should not affect his procreative powers.

553—RUPTURE—I have a four months' old filly with a small rupture just behind its navel, about the size of an English walnut. This just came in the last six weeks and seems to grow larger. Will anything do besides an operation? We have no veterinary under 25 or 30 miles and one would charge $35 or $40.00 to operate on the colt.—Canada Subscriber.

REPLY—These cases nearly always require a surgical operation in order to effect a cure. Unless the means of transportation are very inconvenient so as to consume an extra amount of your veterinarian's time, it seems to us that the charges demanded are excessive. You could better afford to put the colt in a farm wagon and take it to some competent veterinarian if transportation on their part is a serious problem.

When the Panama canal is open for business our bulbs and beet seed will come from the Pacific coast.—United States Department of Agriculture Report.

Warranted to Give Satisfaction.
Gombault's
Caustic Balsam

Has Imitators But No Competitors.
A Safe, Speedy and Positive Cure for
Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.
As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.

16 **SEE HERE.** 16

For sale: 7 black jacks from 3 years to 5 years old; all sound; prompt performers on mares; 15 to 16 hands. Three of them weigh over 1100 pounds each. 8 black Mammoth jennets, 14½ to 15½ hands high. One black Percheron stallion. His number is 11836; will make a 2100 lb. horse.

All cheap for cash or will trade for land within 100 miles of K. C.

W. W. Shott, Lathrop, Mo.

---

22 HEAD OF JACKS AND JENNETS.

For sale, from six months to 8 years old. They are all of the large kind and have good color and big bone. Also an extra good draft stallion, 7 years old, and trotting stallions. I must sell these horses on account of their fillies. Come and see them; they are priced to sell.

HENRY OBERMAN,
Friestatt, Lawrence County, Mo.

JACK STOCK AND STUD COLTS

I have three jacks, 3, 2 and 1 year old; black with white points and fair size. Also four good sized jennets, two are good producers of jack colts and the others are not old enough yet to produce. One is heavy in foal and the others bred this season. Also two Percheron stud colts. Will sell this stock or trade for good work mules and will close it out soon.

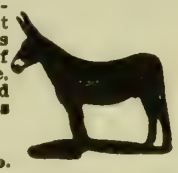
F. W. Pollman, LaCygne, Linn, Co., Kansas

KENTUCKY JACK FARM
Established in 1884.

A fine lot of black Mammoth Kentucky jacks. Big bone and plenty of weight. Will sell at special prices in order to make room for young stock. We sell more jacks to the Western trade than any breeder in Kentucky. Write for prices or come and see me. Guarantee to please our customers.
Joe E. Wright, Junction City, Ky.

FOR SALE

A good jack; 5 years old July 20, 1913; 16¾ hands high; 33 inch ears; 22 inch arm; 20 inch hock; 9½ inch bone and 70 inch heart girth. A good worker on mares or jennets. Two crops of colts to show. Cannot be bought for a song, but priced worth the money. No trades considered.



Louis Koenig, Solomon, Kas.

JACKS FOR SALE

Black, white points; 15¾ standard; five years old this fall. Good head, neck and ears and heavy boned. This jack is good enough to head and herd of jennets and is absolutely right in every way. Come and see him if you want a good one, and if you don't find him first class I will pay your expenses.

Thos. Frint, Belleville, Kas., Route 4.

FAIRVIEW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address

J. C. HUCKSTEP,
Eolia, Pike County, Mo.

For Sale

One car load of three year old mules; halter broke; unbranded. Bred from draft mares and a Mammoth jack.

Arnold & Upham, Hermosa, S. Dak.

JENNETS OR JACKS TO TRADE

for good registered draft stallion. Jack stock for sale at all times. Also have for sale 30 good mule colts, by a 15¾ hands jacks and 40 colts by a draft stallion.

Stanley Turner, Water Valley, Tex.

FOR SALE.

Seven first class jacks; ages one to six. Bred right; raised right. Priced to sell. Colts to show. Mares in foal for those of proper age. Also some good jennets; ages one to seven.

L. W. Garriott, Austin, Scott Co., Ind.

SEVEN HEAD OF JACKS

For Sale. I have Missouri, Tennessee and home-raised jacks. Will sell cheap for cash or good notes. These jacks are 15 hands standard measure.

J. E. Young, Branch, Ark.

HER DISTINCTION.

A teacher asked her class in spelling to state the difference between the words "results" and "consequences."

A bright girl replied, "Results are what you expect, and consequences are what you get."—Harper's Bazar.

FIELD NOTES

PUBLIC SALE DATES.

Upon request we will announce, under this head, free of charge, the date and location and the name of proprietor or manager, for all public sales of pure-bred live stock which are to be advertised in the columns of the American Breeder.

Percherons.

October 20.—Robison Bros., Morton, Ill.

December 9.—W. S. Corsa, White Hall, Ill.

December 11.—Ben Bohlander & Son, El Paso Ill.

December 15.—Chas. C. Irvine, Ankeny, Ia.

Belgians.

December 15.—Chas. Irvine, Ankeny, Ia.

Shire Mares.

December 11.—Truman's Pioneer Stud Farm, Bushnell, Ill.

That one "prophet" has plenty of "honor in his own home," is shown by the following letter referring to a regular advertiser in the American Breeder: "To the Trade and Horsemen: "We, the druggists of Goshen, Ind., have sold Spohn's Distemper and Cough Cure for a number of years. To ourselves and our customers it is the most satisfactory veterinary preparation we have ever handled. From what we have ascertained, we know that Spohn's Cure has successfully met all competition and established itself the standard among stock owners and handlers. The Spohn Medical Company, the manufacturers, have the utmost confidence of the public.—D. H. Hawks, L. S. Hottel, John Bickel, Arthur Beck, Harry Bickel. Goshen, Ind., September, 1911."

The Auto-Fedan Hay Press Co., of Kansas City, Mo., get many letters like the following: "We have purchased one of your three stroke horse power presses with the new improvements (machine No. 2325), and have saved the interest on the machine in baling our own hay, the first crop, besides very near half paying for the machine baling for my neighbors. Have had your machines in my fields over three years and like them fine. Have worked with one press that baled 704 bales in a day and averaged 558 per day for a week. I recommend your machines to anyone wanting presses.—Edw. Scroggins & Sons, Hope, New Mex."

Any one with young mules or mares to trade for a stallion would undoubtedly do well to write W. F. Burns, Maryneal, Texas. His ad is in this issue.

On Saturday, September 27, Mrs. Mabel Loper will hold a public sale of registered Percheron horses and mares at Chesterfield, Ill., to settle the estate of the late G. B. Loper. The ad appears in this issue.

J. Crouch & Son, of Lafayette, Ind., write: Our usual large summer importation of Percheron and Belgian stallions and mares are now at the farm. We brought over 125 head of the best Percheron and Belgian stallions and mares that ever left Europe. Many of them are important prize winners at the French and Belgian shows this year, and the entire lot are a very even bunch of splendid young stallions and mares, with plenty of bone, weight and other good qualities.

A. Latimer Wilson, importer at Creston, Iowa, writes that his new importation of Percheron and Belgian stallions arrived at his barns last week. He writes they are an extra good lot of horses and would be much pleased to have his old customers as well as new customers, come and see them. If you are in the market for a horse, write to Mr. Wilson.

There is nothing more standard in the line of horse remedies than Gambault's Caustic Balsam. It is one of the oldest on the market and has held its own at all times. The Lawrence Williams Co., advertise it regularly in these columns. Address them at Cleveland, Ohio.

H. H. Burns of Argonia, Kas., is advertising his farm consisting of 160 acres, for sale as he is going in the breeding business. Read the ad; it gives full particulars.

Read the ad in this issue of E. R. Manning, Bunkerhill, Kansas. Mr. Manning has ten head of Percherons for sale.

W. W. Shott of Lathrop, Mo., has seven jacks for sale from three to five years old, or he will trade them for land. Read what he says in his ad in this issue.

A stallion and a jack are advertised in this issue by W. H. Stahlhut, Alhambra, Ill. He says he will sell them cheap as he is unable to get help.

Henry Obermann of Friestatt, Mo., starts his ad in this issue. He has 22 head of jacks and jennets for sale, a draft stallion and some trotting stallions. Write him for full particulars about his stock.

E. A. Fisher of Thayer, Kans., has two jacks and one Percheron stallion advertised for sale in this issue, as he has no feed or water.

Adam Matz is advertising his prize winning Belgian stallion for sale in this issue. Any one in the market should not fail to look this up.

Any one in the market for a jack should read the ad in this issue of Delbert Archer, St. Charles, Iowa. He has two jacks and wishes to sell one of them.

Those looking for Shire stallions should not fail to read the advertisement in this issue of J. E. McWherter, Plymouth, Ill.

E. J. Hunter of Vandalia, Ill., is advertising an Arabian stallion and a black jack for sale in this issue. Read the ad for further particulars.

Read the ad of C. Rovank of Draper, So. Dak., in this issue. He is advertising Greyhounds and Poland China pigs for sale. He also has a 320 acre farm to trade.

Don't fail to read the new ad of Fred Chandler, Chariton, Iowa, which appears in this issue.

R. I. Little of Fairfax, Iowa, has six jacks, some Percherons and Belgians for sale or trade. Read the ad.

Chas. Irvine of Ankeny, Iowa, is in the market for aged stallions. Read what he says in his ad in this issue.

HOW DOGS SPREAD A SHEEP DISEASE.

To the American Breeder:—As a result of investigations by specialists of the Bureau of Animal Industry, it has been determined that sheep raisers in Montana are losing probably ten thousand dollars a year from a cause with which many of them are unfamiliar. The death of many sheep, which are supposed to die of "loco," is found to be due to "gid," a parasite which causes a bladderworm in

MAKE A BID ON THIS JACK

KING LEO (see picture); 8 years old; 62 in. high; 69 in. heart girth; 8¾ in. bone (foreleg, smallest place).

Or This One

BILL BOY, foaled Oct. 12, 1910; black with light points; 59 in. high; 64 in. heart; 18½ in. arm; 8 in. bone; 14 in. knee; 33 in. across ears; 80 in. long; 30 in. poll to lip.

Highest Bid Buys Them

Both Jacks are broke to mares and all right. Come and see them, or write for full particulars. Then make me an offer on either one or both. All offers will be held until October 5, 1913, when both jacks will go on the highest offers received.

J. W. GILLUM, WING, Yell County, Ark.

Jack Sores Cured

By Using Jack Sorine. Sold With a Cash Guarantee.

O. P. WILSON SERUM CO., Kansas City, Mo.

Enclosed find my check for $5 for a package of your "Jacksorine" for jack sores. This is for a neighbor and shows on its face that your salve is doing my old jack's leg some good.

June 5, 1913. W. H. HAYS, Bloomfield, Ky.

We guarantee Jack Sorine to cure any sore on the legs of a jack or stallion, no matter how long it has been sore or what caused it. You know we have a good, reliable remedy or we could not guarantee it to cure all sores on the legs of stallions and jacks, without any restrictions. It is put up in a substantial box and sent promptly by mail. It is a paste and applied with a small brush.

Send money by bank draft or P. O. money order. Price $5.00.

O. P. Wilson & Co., 3754 Wayne Avenue, Kansas City, Mo.

BARGAINS! **I am cleaning up my of stock Big Jacks and Draft Stallions**

And am making the lowest prices you ever heard of for stock as good.

Just come here, pick out what you want and if you don't buy it won't be the fault of the price.

I don't believe in having any good, serviceable stock left when the season ends, and this is the way I keep from it. Come and see.

W. J. Finley, Higginsville, Mo.

---

2 JACKS; 1 PERCHERON STALLION.

Black jack, 15¾ standard; 33 inch ear; heavy bone and a good one. Gray jack, 13½; good head and ear. These are quick servers and good foal getters. Horse, white stripe; registered; these are number one breeders. Colts to show. Must sell or trade for horses, mules or cattle. No feed or water.

E. A. Fisher, Thayer, Kansas. Rte. 3.

JACK FOR SALE.

I have two jacks and will sell either one of them. Both are four years old this fall; broke to serve; have colts to show; they were examined and have state license. One is 14 hands high; black with light points; other one is 15 hands high; black, light points, and is registered; sire Col. Livingston 3351; dam Lady Jane 1857. Will price to sell.

DELBERT ARCHER,
St. Charles, Madison County, Ia.

BLACK JACK, MEALY POINTS.

For sale; 15 hands high with good bone and body; 7 years old. A good breeder and quick server. Am quitting the business, reason for selling. Price $400. **E. J. Munter, Vandalia, Fayette County, Ill. Rte. 3.**

SIX GOOD BREEDING JACKS.

Also imported Percheron and Belgian stallions; some weigh 2160 pounds. Stock for sale or trade.

R. I. LITTLE,
Fairfax, Iowa. Route 2.

JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns 2 miles from town.

Phil Walker, Moline, Elk County, Kas.

Winners in the American Breeder Jack Show

FIRST PRIZE.
No. 21—7 yrs.; 63 in. high; 75 in. heart; 9 in. bone.

SECOND PRIZE
No. 30—5 yrs.; 64 in high; 73 in. heart; 10 in. bone.

THIRD PRIZE.
No. 28—5 yrs. 65 in. high; 69 in. heart; 9 in. bone.

FOURTH PRIZE.
No. 42—8 yrs.; 62 in. high; 70 in. heart; 9 in. bone.

FIFTH PRIZE.
No. 33—4 yrs.; 64½ in. high; 72½ in. heart; 10 in. bone.

SIXTH PRIZE.
No. 47—4 yrs.; 63 in. high; 69 in. heart; 9 in. bone.

the brain of sheep. This parasite causes sheep in the final stage of the disease to act as if giddy and walk around in circles. It is transmitted to dogs which eat the brain of sheep that have had the disease. The bladderworm from the sheep's brain or spinal cord develops into tapeworm in the dog. The eggs of these tapeworms get on the grass or in the water, are eaten by the sheep, and finally work their way into the brain and form the gid parasite.

The Department, in this bulletin, Circular No. 164, Bureau of Animal Industry, strongly advises sheep raisers to keep their sheep dogs or ranch dogs free from tapeworms. To accomplish this, the Department advises the sheep raisers in Montana, or wherever the "gid" is found, to destroy the heads of dead sheep by burning them or splitting the skull and covering the brains with turpentine, formaldehyde, or sheep dip.

This bulletin also gives full directions for operating on live sheep affected by the "gid" parasite, and thus saving more favorable cases. It also gives a list of drugs and methods of destroying tapeworms in dogs which may spread "gid." Sheep men are urged to take active steps to eradicate this pest, which can easily be spread to new districts by moving affected sheep or dogs into new territories.

This bulletin is free upon applicatio nto this department.—Department of Agriculture, Washington, D. C.

In buying young cattle for breeding purposes it is decidedly safer to buy subject to tuberculin test from a herd where little or no tuberculosis exists, than to buy from a badly affected herd, even though the diseased animal does not react on test.—Dr. M. H. Reynolds, Minnesota University Farm.

Complete List of Jack Show Entries

Probably every one of our readers has saved the issue of the American Breeder in which first appeared the photographs of the jack entries in the class for mature animals. We promised the publication of this list as soon as the decisions were made and here it is, giving the owner and the name and age of each jack corresponding with the entry numbers shown with the photographs when they were first published. In any case where the age has been omitted it is understood that it is four years or over, although in one case at least, the photograph sent was taken before the jack had reached four years. This, of course, was to the owner's disadvantage, but was nothing we could help as we tried to get up-to-date photographs of everything.

We have had hundreds of letters about this show indicating the widespread interest it has aroused, and during the recent state fairs this feature of the American Breeder has been mentioned to us daily by some of the stockmen in attendance. We give below the complete list of exhibitors:

Entry No. 30—Jumbo, 4 years, H. H. Burns, Sumner County, Kas.
" " 28—Clover Leaf King, 5 years, G. W. Cantwell, Reno County, Kas.
" " 37—Karl, 7 years, Elm View Stock Farm, Grayson County, Tex.
" " 44—Gold Bug, 9 years, Chas. W. Foster, Ness County, Kas.
" " 20—Longfellow, 11 years, S. L. Green, Hunt County, Tex.
" " 27—King Leo, 8 years, J. W. Gillum, Yell County, Ark.
" " 21—Pharaoh, 7 years, H. T. Hineman, Lane County, Kas.
" " 23—Napoleon Jr., 13 years, J. B. Hummel, Sumner County, Kas.
" " 29—Tennessee Alf, 7 years, G. H. Harrison, Williamson County, Ill.
" " 34—Waldhime, 6 years, Clyde Hussey, Cloud County, Kas.
" " 38—Knox Sampson, 4 years, Hedrick & Betebenner, Edwards County, Ill.
" " 31—Jim, 6 years, G. S. Lewis, Greenwood County, Kas.
" " 40—Choice Goods, 6 years, John W. Lake, Russell County, Kas.
" " 42—Choice Jumbo, 8 years, J. W. McCanse, Lawrence County, Mo.
" " 22—Mertes, 13 years, H. S. Marks, Dade County, Mo.
" " 33—Jet, 4 years, J. W. Maupin, Shelby County, Mo.
" " 35—Sir Walter, 7 years, W. O. Richardson, Coffey County, Kas.
" " 39—Dillingham, 4 years, D. Z. Royer, Jefferson County, West Va.
" " 41—Longfellow, 12 years, Lloyd S. Redden, Saline County, Kas.
" " 25—Deacon the Great, 7 years, J. W. Shockley, Fleming County, Ky.
" " 26—Taxpayer, 10 years, Smith & McGaughy, Lee County, Miss.
" " 32—Royal Dave, 9 years, W. B. Shorter, Woods County, Okla.
" " 36—Tax Collector, 4 years, W. H. Shibinski, Washington County, Ill.
" " 43—Illinois King, 4 years, John Scherer, Richland County, Ill.
" " 46—Givens Pride, 5 years, C. M. Strawn, Morgan County, Ill.
" " 45—High Tower, 7 years, J. G. Tyler, Oklahoma County, Okla.
" " 47—Brillador, 4 years, Stanley Turner, Tom Greene County, Tex.
" " 24—Texas Wonder, 5 years, W. A. Winningham, Fannin County, Tex.

HOW THE VOTES CAME IN.

Over 100 jack breeders, representing the states of Kentucky, Missouri, Nebraska, Kansas, Oklahoma, Texas, Iowa, Indiana, Illinois, West Virginia, Arkansas, Ohio, Minnesota and South Dakota, have sent in their ballots on the American Breeder Jack Show. The results of the vote is shown above. Only six jacks were voted on. The three judges originally selected had put these jacks highest, but had not agreed on the order in which they should be ranked. The jacks so selected were numbers 21, 28, 30, 33, 42 and 47. These are the numbers we submitted to the jack men among our readers who cared to express an opinion. It is suggestive of the closeness of the contest that every jack but one got as many as one vote for every position. One jack (No. 47) got no vote for first place, and No. 21, that was awarded first place, got only two votes for sixth place. Numbers 33 and 42 showed a tie in the voting, but as the original judges ranked 42 above 33, we have allowed this expressed preference to decide the tie. The job certainly has been an interesting one as well as a close one and we thank both the exhibitors and the voters for helping make it so. Many men, in casting their votes, made reference to good animals outside the six that had been named, and with good reason. We think, however, that any man looking over the six photos above, will admit that here are some jacks. Preceding is the complete list of entries (arranged alphabetically as to owners) giving the name and location of every animal. Evidently no one state has a monopoly in the jack business.

Horse and Cattle Breeding School

November 10 to 22

At the request of many breeders, we have arranged to start a cattle breeding school November 10th. A full week will be devoted to cattle with the exception of one-half day, which will be devoted to hog breeding.

The following week, beginning November 17th, will be the regular horse breeding school.

These schools will be separate, consisting of one week each, but those who care to attend both, may do so for the one tuition fee. One tuition also pays for a life membership, with as many return privileges as the student cares to attend. Those who have attended our former terms will be admitted to both schools without further cost.

There is as much to learn about cattle breeding as there is about horse breeding. Much of this information may be more easily put into practice on cattle than with horses. The average man interested in cattle breeding usually handles his own herd, and can handle them as he chooses. A lot of investigations have been made concerning cattle production.

The regular instructors of the horse breeding school will be employed at the cattle breeding school, with the exception that there will be some new members in both schools. Every instructor except one, at both schools is either a post-graduate veterinarian or a professor from an agricultural college.

The date of this school was changed from December to the advertised date, as it was thought to be the best time for breeders to leave home. A diploma will be issued for each school, to each student who passes the required examination, It will not be necessary to attend both schools in order to graduate; complete instruction is given in both courses.

There are, however, many who will avail themselves of this opportunity to attend both schools while in the city. There are many horse breeders who may interest themselves in cattle and hogs, and practically every cattle or hog breeder is interested in horses. About three-fourths of those who have attended this school are interested in cattle or hogs, and a very large per cent of them have registered stock of one or the other kind.

The tuition fee is $25 for one or both courses. This entitles the student to return at as many terms as he cares to without further cost. The school is guaranteed to be perfectly satisfactory to the student or his tuition fee will be refunded; he alone is to be the judge. At both courses the work will begin every morning at 7:30 and last until 10:30 at night.

VOLUME 6. KANSAS CITY, OCTOBER 5, 1913. NUMBER 18.

The Finish For Crooked Work In Percherons

At a combination draft horse sale in Illinois several years ago a young man asked if it was advisable to buy a grade Percheron mare for $190 and a Percheron Society certificate from another man for $10. He was informed that he could be sent to the penitentiary for obtaining money under false pretenses. He then asked who would do it. He said that he had been informed that H. G. McMillan, president of the Percheron Society of America, and Robert Burgess of Winona, Ill., were both doing business that way.

This set the writer to thinking and making investigations. It was soon learned that H. G. McMillan, then president of the Percheron Society of America, and E. G. Wheeler of the firm of Maasdam & Wheeler at Fairfield, Ia., a director in the Percheron Society of America, had some very prolific females. It also became evident that Robert Burgess was reputed to be notoriously crooked in this respect. There were a few others, but these three firms at that particular time seemed to stand out clearly as leaders in this kind of work.

The writer talked to several men about exposing those who were employing crooked methods of doing business. One man in particular, who has had a wonderful lot of experience, said that it would be dangerous for any one to make mention of such facts, and especially for a new publication, because these individuals were thought to have been protected by a sort of "underground" organization among outside interests. After being thoroughly convinced that something must be done to save the honorable Percheron breeders, a campaign was started in this publication March 5, 1911. It was evident that if the president and one of the directors of the Percheron Society of America were guilty of fraudulent registration, that this was the place to begin.

While Robert Burgess has been mentioned as the crookedest man in the draft horse business, yet his offenses could not compare with those of E. G. Wheeler, to say nothing of those of H. G. McMillan, as they were respectively director and president of the Percheron Society of America at that time, while Robert Burgess had no official connection with the records. These men were betraying a trust and using their office, not only to further their own interests, but to contaminate the records for many generations to come. This was not the worst of it—it set a demoralizing and business destroying example for other men in the business, and especially for the rising generation. Other breeders who were raising honest Percheron horses said that they could not compete with such methods. Our campaign was centered on these two men, and became the most severe fight for the square deal ever waged in the history of the American live stock industry.

McMillan and Wheeler were reputed to be very wealthy; they were also in position to reach the records and treasury of the Percheron Society of America. The stockholders' money was used freely in defending them. Detectives were even hired to find evidence that would discredit this publication. In fact, everything was done that could be done to defeat or discredit the campaign this publication had begun.

At the Percheron Society election that fall an agreement was secured which gave more than could be secured by a majority vote. In addition to the regular expirations on the board E. G. Wheeler was to resign as a director and H. G. McMillan was not to be a candidate for re-election to the presidency. But he was elected and given a "whitewash," after which he resigned as president. This might make the records look good in after years but the principle of it will not be changed in the minds of men now living. Wheeler dropped out as agreed.

The American Breeder dropped the matter at that time, abiding by the agreement and hoping that the crooked work was to be stopped, but later, after taking more than a year to see whether or no the ringleaders were going to do as they promised, another campaign had to be started March 5, 1913. After the second article had appeared we were notified that H. G. McMillan would not be a candidate for re-election on the board of directors. Our assurance came in such a way as to promise speedy improvement in the policy and sentiment of the Percheron Society, and believing we could best aid the other workers in this direction by discontinuing our campaign for the time being, we did so. With the good men already on the board of directors, and the overwhelming sentiment which exists against the few crooks (as shown in many meetings and conferences the past few months) we believe conditions will continue better for all concerned if we do not again, for the present, take up this campaign.

In our second article we had called on the Percheron breeders who were in favor of clean pedigrees, to send us their votes for candidates they wished to represent them in the election of four directors to fill the places of those whose terms are soon to expire. We believe that the four Percheron breeders and importers who led in this voting could be elected. In the state of Illinois the law and court ruling concerning corporations are not favorable, yet we believe the undivided support of the honest men would bring victory. It would have been a hard fight and the Percheron Society would have been divided as long as it lasted. We advised with many men, both supporters and opponents. Practically every man said that if the H. G. McMillan infection could be obliterated from the system of the Percheron Society that it would not be necessary and might not be best to continue a campaign which kept reminding our readers of a baneful influence now practically dead. By dropping it a better opportunity would be given to those left in power to make right the wrongs which have been done. A lot of hard things have been said and done against this publication by men who now indorse the course we followed. This is not a personal fight. It is our business as the paper of the honest breeder and the majority to do the best we can for all honorable men interested in the Percheron Society of America.

We now have an official signed statement to the effect that H. G. McMillan has announced to members of the board of directors that he will not attempt to be a candidate for re-election. We also have the assurance of holdover members of the board of directors, and of W. S. Dunham, whose term expires, that they will use their best efforts in preventing further fraudulent registrations in the Percheron records. The situation, as we now understand it, is that W. S. Dunham and John De Lancey will be candidates for re-election and that H. G. McMillan and C. O. Keiser will not be candidates for re-election. These two places are to be filled, one from Iowa and the other from either North or South Dakota. For new directors men are being sought who will be acceptable to a majority of the stockholders. We have had nothing to do with this program but have been informed that this will be carried out, if possible, with the aid of those in charge of the proxy committee. This may not be perfectly satisfactory to everybody, but it must be remembered that it is difficult to accomplish everything at once. Our original campaign was begun to efface H. G. McMillan and E. G. Wheeler from the affairs of the Percheron Society, and when this is done the American Breeder will feel that it has finished a good job.

We have always had confidence in the honesty of live stock breeders when they have had an opportunity to thoroughly understand the situation. Many breeders were greatly surprised when the exposures were made. These same breeders might be even more surprised (if they have not already realized it) when they study the situation enough to understand that most of the crooked work in draft horse pedigrees has been facilitated by the favorable attitude toward its perpetrators, of a powerful but unscrupulous live stock paper.

This feature, in all its bearings, is worthy of a lot of thought on the part of all classes of breeders. The three offending firms mentioned in this article, for instance, have kept up under the protection and policy of the above mentioned journal. The very heart of the live stock industry has been attacked; the very influence that was looked to, by many, for supporting the right, has been used to mislead the people for the sake of power, place or money. It is one saving feature of this disgusting example that practically no other agricultural paper of importance took an active part in upholding the hands of the crooks.

The injury done to the Percheron breed of horses by such a publication can never be measured in dollars and cents. It is not merely the immediate purchaser who will suffer, but those owning the progeny for several generations will feel the effects of these betrayals of the readers' confidence. Fortunately many of the animals from doubtful sources have been, and are being sold without pedigrees—the owners became ashamed of them and the records are thus automatically cleaning themselves to some extent.

No charges have ever been brought against C. O. Keiser as far as we know. His other interests are consuming his time and he does not handle many Percheron horses. The name of Keiser Bros. of Keota, Ia., has been associated with the improvement in Percheron horses for a great many years. Their reputation will go down in the history of the Percheron breed as good, for they have given much support to its development.

There are more than 100,000 breeders who are actually engaged in horse production and improvement. These men hold the key to the situation. These men constitute one of the most independent and influential classes in the country if they only realized it. There are not many of them who would care to buy an animal with a pedigree which is fraudulent. The remedy which this great class of breeders hold in their power to apply is for every man, regardless of the kind of live stock he handles, to appoint himself as a committee of one to direct every buyer of horses away from the crooks. Every individual should consider it his special duty to go out of the way to see his friends or neighbors, or call them over the telephone, and keep them from buying an animal that comes from the hands of a crook. Every man that buys a mare from a crook will be forced to sell the progeny. In after years breeders are going to be more familiar with pedigrees. It would be disastrous indeed to contaminate a herd with this questionable blood.

Most breeders who buy a stallion will want to sell it again in a few years and get another one to take its place. If its certificate bears the name of one of these crooks as being the breeder, the animal will not be worth as much money, because these pedigrees are going to be discriminated against more and more each year. Their undesirability will become common history. Who would care to have a prospective buyer say:

"I don't want that animal: that is a McMillan pedigree, or a Wheeler or a Burgess animal."

This campaign does not interest Percheron breeders exclusively; it concerns every man interested in honest methods. If every man will do his duty and make it a point to steer the purchasers away from men who are favorable to crooked pedigrees, they can not stay in business. When the profit is removed these men will be driven out because they are after the Almighty dollar only. They have no real friendship for the breed, or for

the breeders who intend to make this a life-long occupation.

Every individual should familiarize himself with this situation and make it a point to be at every gathering of men in the country; at farm sales; in the smaller towns on Saturdays; at every fair; every place where men are liable to congregate he should be found talking and explaining these things. This is a matter of education. It is for the benefit of the general public. This is the time for every interested individual to help make an example of those who live and profit by crooked methods. The time has come when he must be talking. No honest man can be quiet in a campaign of this kind; he must stand up and be a man among men. When an individual is found who takes it upon himself to defend the promulgators of crooked pedigrees he should be branded then and there. If he favors crooked pedigrees of what value to the live stock industry can he be? If he is for clean pedigrees why does he favor the crooks? Ask yourself these questions—and then ask him.

There may be some who will contend that too much has been said and evade the real problem by this method. We contend that there would be more men interested in pure bred live stock if more of them had confidence in the general situation and could feel that deceptions would be given publicity as fast as they became known. We are asking now that such publicity be given wherever it is needed. We will take it as a favor from any reader of this, if he will send us the name and address of anyone he finds defending the crooked pedigrees. Literally thousands can be protected by the plan we propose, and no one is hurt but the very few who are doing wrong.

This subject might as well be settled now as at any other time. Would it not be wise for those interested to make some inquiry of different individuals as to how they stand on this subject? Be on the lookout for those fellows who are working underhand—the real smooth fellows. When 100,000 men make up their minds to eliminate the crooks it will not take the crooks long to discover that their business is quietly slipping away; they will discover sooner or later that honesty is the best policy even from their standpoint, and that it is time for them to make a change. We believe that when this subject is thoroughly understood and advertised from man to man, that a new epoch in live stock breeding will have been reached. It is not necessary to go into detail as to why you think any one is a crook; just tell the prospective purchaser, as a friend, not to go to a particular place. It does not take much talking to send a man to a reliable breeder, dealer or importer. There are hundreds of men in the business who are on the square, who are fighting for clean pedigrees and are willing to give value received. There are plenty of places where good, honest horses can be purchased and it is not necessary to patronize a crook. The draft horse industry is too valuable to be smirched and interfered with by a few unscrupulous men.

We have enough confidence in the honesty and integrity of the average American citizen to believe he will do his duty in this respect. When the crooks find that their business is slipping away, their one-time friends also will leave rapidly. A crook may have plenty of friends while his financial standing provides plenty of ready cash, but with the passing of the Almighty dollar, the friends of the crooks vanish quickly. When those individuals who sympathize with the crooks find that they also are being watched just as closely by 100,000 men, they too, will have occasion to clean up and will be very careful about making any outside statements. This is the time to get busy. The next few months will eliminate the crooks if every man does his duty.

A few years ago two men were looking at a bunch of colts, and among those colts was a very fine specimen. The owner remarked that it was a colt by the old grey horse, but unfortunately its dam was a grade mare and it would be sold as a grade. The owner had a large number of colts and a lot of registered mares. This colt might have been substituted for an inferior colt of the same age, sex and markings, and sold for more money. But the owner stated that this colt must sell as a grade. Little was thought of this conversation at the time, but other experiences and a wider acquaintance with the owner of this stock has developed during the last few years a profound admiration on the part of the writer, for the many breeders who strictly and continously practice honesty in their business.

In December, 1911, men interested in Percheron horses were being suggested for directors in the Percheron Society of America. It was remembrance of the case of this grade colt which caused the name of W. S. Corsa to be mentioned as a director, which office he now holds. There are now a number of good, substantial men on the Board of Directors of the Percheron Society of America, and we hope to see more added, and see this society grow and develop until every member will have implicit confidence in its management.

Better American Drafters

Bunching Stallion Colts for Sale to Breeders, Importers or Feeders Who Will Properly Grow Them Out. A Free Service to Readers That Will Educate Demand.

This country ought to make a greater effort to produce more and better registered draft stallions. Millions of dollars are going out of this country that should be spent with the American breeders and farmers. More encouragement should be given to the American breeder; his business should be made more profitable. When we consider that only about 8 per cent of the stallions standing for public service in this country are registered draft stallions (and a very large per cent of those are not suitable for such purpose), we see that after all very little development has been made in this direction.

An already great demand for the big, rugged draft gelding is increasing. The year 1913 will go down in history as having brought the highest prices ever paid for big draft geldings. This is causing, and will continue to cause, a wonderful market for the right kind of stallions. Men who have made a life study of the situation contend that it will be years before this demand will be supplied by both the American breeder and the importers working together. This demand may never be supplied unless the American breeders pay more attention to the selection of better sires and to thoroughly developing their colts. In foreign countries the colts are better developed. Breeders are not as well fixed for developing the colts as the American breeders, but they know that a few dollars worth of extra feed and a suitable place is money well spent.

At weaning time the colts are usually bunched, from 10 to 20 head at a place, so they may be found when buyers are looking for them. Why not bunch them in this country? A breeder having a few colts can very easily buy a few more and prepare for their development. This development should start as early as possible. The draft horse size is not easily maintained except by using the best sires and fully developing the progeny. The largest and the best bred herd of horses in this or any other country will diminish in size and weight very rapidly when the progeny is only partially fed and cared for.

We should like to see the breeders trade among themselves and learn the value of these colts at weaning time. The breeder who is in a position to handle these colts can add a few more to his number and have enough of this class of stock to make it more profitable. The best manner of handling these stud colts is to have a large enclosure of several acres, or a large pasture, fenced stallion tight, with an outside fence around it so that no other animal could get close. A large shed should be erected with several openings on the south side so that the sun could shine in and they could run in and out at their leisure. A manger should be built in this inclosure so that in stormy weather it would not be necessary for the colts to expose themselves. Another rack should be built outside in a high, dry place where they could enjoy the fresh air and sunshine. This enclosure should be large enough so that it would not tramp up and get filthy. It might be necessary to cement a part of the ground in the vicinity of the outside hay rack and feed bunks.

Plenty of suitable grain and nutritious hay with a good water supply and plenty of freedom will develop these colts very rapidly. If no other stock is allowed to interfere with this group of colts they can be successfully kept together under this plan until 30 months of age. Too many breeders put a halter on a stud colt as soon as it begins to show a little masculinity. It is then tied by the head and kept without any exercise. No kind of young live stock can be raised successfully with this plan. Don't forget the value of exercise, fresh air, sunshine and kindness while developing young stock. These are all necessary and very cheap.

In communication with an importer a few days ago the writer was informed that he (the importer) would buy 100 head of good registered draft colts but that he could not find them. He had traveled here and there, had written letters but had purchased only a few after having spent several months in the attempt. He further stated that his time was worth too much money to go to look at one colt. Too frequently where only one or two colts could be found at a place they were not sufficiently developed.

The buyers are looking for large stallions. There is not a very good demand for the little ones. He also made mention of the fact that the owner of a good registered mare felt discouraged when he could not offer him a good price for a stunted colt.

If the importer, dealer and large breeder knew where to go to look at 10, 15 or 20 head of good, well developed 2 or 3-year-old stallions there would be a big improvement in home-bred draft horses. The imported horses are getting higher and scarcer. Many other countries are competing for this stock. There are more Percheron horses in this country than all other breeds combined. The biggest demand for imported horses are for Percherons. The Percheron district of France is very small; it can supply only a certain number. Other nations supplying their wants from that small district greatly interferes with the importation of Percheron horses to this country. In the course of time American breeders must supply this deficiency. Posted breeders state that in their opinion it will be necessary to import new blood for a great many years. There is also a tendency among some classes to buy imported horses because they are recognized by the Bureau of Animal Industry.

The American Breeder wishes to be of as much service as possible to the draft horse breeder and encourage the development and the business of bunching and developing registered draft colts. We are going to give the location of these colts free of charge for the subscribers of the American Breeder. We want all our readers to fill out the blank below. We will classify all the offerings by states, giving the county and town of each so that a breeder, dealer or importer can find the colts that are advertised in the vicinity of one town or in the county. This service will be first given in connection with Percherons. Any breeder who makes a misstatement concerning the stud colts he has will not have another opportunity of this kind. The reason we are limiting this information to stud colts is to get them bunched while young and in hands of men who know how and will thoroughly develop them. This will also give opportunity to select some of the best individuals and prepare them for the large draft horse shows and give the American breeders more opportunity to see what home-bred draft horses look like when thoroughly developed.

STUD COLTS WANTED

This Service is for subscribers only. Those who are not now subscribers can take advantage of our special offer (not good after December 1, 1913) of $1 for 3 years. Fill out the coupon below showing what you have in stud colts, and send it along with your dollar for a 3 years subscription.

I have ..... head of sound Percheron stud colts, less than 1 year of age, registered or registerable in the Percheron Society of America, which I am willing to sell at a fair market value. Please announce this free to the readers of the American Breeder.

Name .....

Town .....

County .....State .....

This coupon, properly filled out, must reach the American Breeder before November 10.

American Breeder's School

(HORSE BREEDING LESSON II)

Anatomy of the Female Generative Organs.

HE OVARIES resemble very much testicles of the male, being corponding organs. They are ovoid in e and smaller than the testicles. y occupy a position in the subar region (beneath the backbone) the kidneys, and are supported in tion by the broad or suspensory nent and the vessels which supply with blood. They are surrounded their outer surface with a thin y coat which is a continuation of membrane that is seen on the sur- of the bowels and inside the cav- Beneath this membrane is a ng, tough envelope that forms the covering of the ovary (tunica ginea).

pon cutting into an ovary it will ound that its true substance is of ddish white color and it is within tissue that the ova are found. ll round ovisacs (Graafian vesi- invest the ova, and it will be ed as any particular ovum devel- that the Graafian vesicle also en- s and that it, with its contained n gradually works toward the sur- of the ovary. By the time the n has matured the Graafian vesi- has reached the surface, and dis- ng the investing coat of the ovary ursts on the surface. It must be embered that the ovum is a cell t 1-150th of an inch in diameter It is a perfectly passive body; is, it is unlike the spermatozoa espect to power of movement. It depend upon the action of some hboring part for guidance into its er channels. At the upper end ne tube that forms the connection een the ovary and horn of the us there are certain expanded er-like structures (fimbria) that e to grasp and direct the released n into the canal that leads to the us.

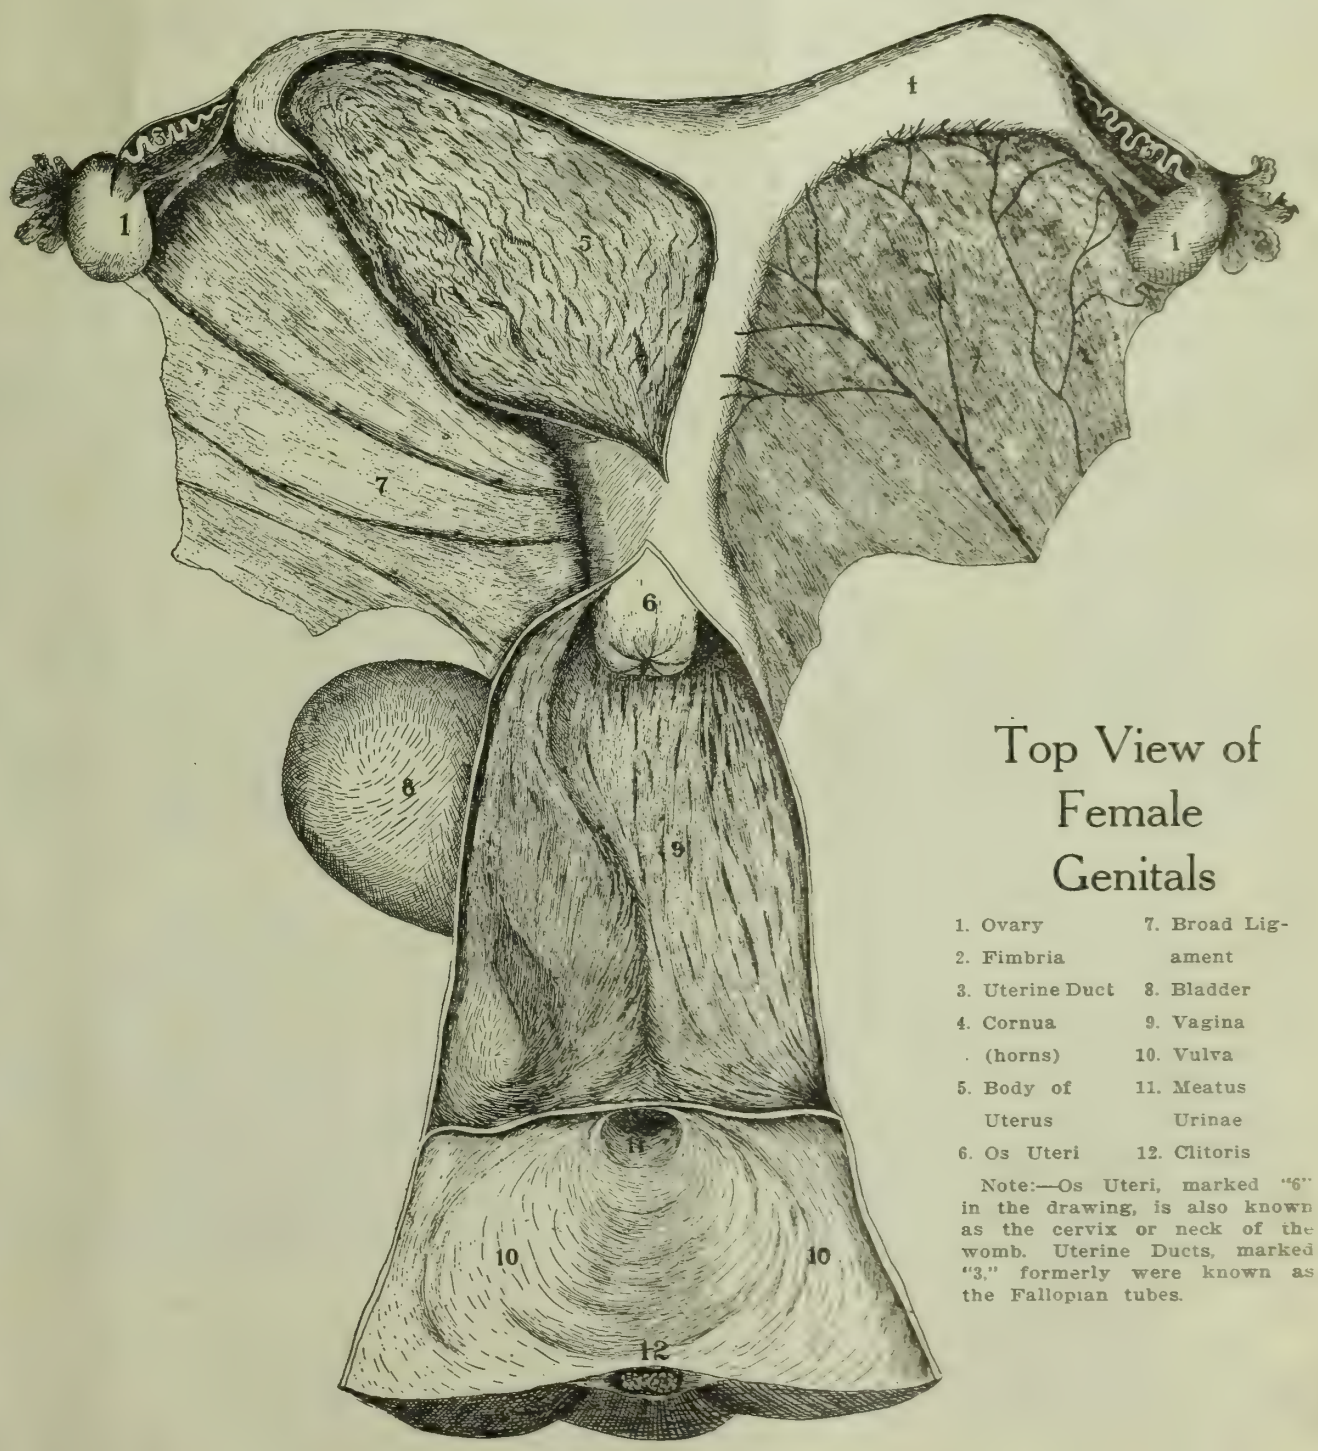
ese fimbria possess the power of ing about and applying themselves at point where the ovum is being ased. Should they fail in their tion of properly directing the n it may happen that the latter drop off into space, and coming contact with some of the neighng organs may undergo at least ial development provided it has fecundated by having come in act with a spermatozoon. These al developments which take place ide of the uterus are alluded to extra uterine gestations.

here is abundant proof that these a uterine gestations are of rather uent occurence as shown by the ious post-mortem findings in large king houses where food animals slaughtered. The ovary then is gland or organ wherein the female or ovum is developed, and when of these cells is released it is ected into the uterine duct through ch it may pass to the uterus.

HE UTERINE DUCTS or Fallopian es, are two very small tubes that mmunicate with the ovaries at the end by means of their finger-like cesses or fimbria and with the ns of the uterus at the other end. y are arranged in a very convoed or wavy-like manner which ves to retard the progress of the m through them. It is thought that udation usually takes place along course of these constricted tubes their small diameter favors the upd moving spermatozoa coming in se contact with the descending m. The ovum is aided in its progs in the direction of the uterus by cells that line the uterine duct. ese lining cells are little column like precesses having minute hair-like extensions on their ends and these hair-like extensions keep up a waving movement in the direction of the uterus which serves to propel the ovum slowly in that direction. The uterine ducts communicate with the horns of the uterus, there being two of the latter.

THE HORNS, or cornua, are simply continuations of the uterine body, only existing in a divided state. In other words, as one proceeds forward in the mare it is found that the uterus divides, forming two horns which later continue in the form of the uterine ducts to the ovaries.

The horns do not differ materially in structure from the uterus itself, being made up of muscular walls and lined with a mucous membrane.



THE UTERUS is a cylindrical body somewhat flattened and is located in the sublumbar region and projects backward into the constricted pelvic cavity. The rectum, or posterior bowel, lies above it, while the bladder and some of the intestines are found below. It is supported in position by several very strong ligaments and it is made up of strong muscular walls which, like the horns, are lined with a mucous membrane. These muscular walls become considerably thickened and strengthened during the process of gestation in order that they may properly support and provide the necessary structures for the developing foetus.

The uterus then communicates with the cornua anteriorly, while posteriorly it communicates with the vagina. The latter communication is by means of structures that are peculiar in their make-up. At this point the uterus is constricted, forming what is known as the neck (cervix) which latter projects into the anterior part of the vagina and in the virgin mare is quite conspicuous.

The opening through the cervix by means of which the uterus communicates with the vagina is called the mouth or os uteri. This mouth or opening is closed in the most of healthy mares when not in season and during the period of gestation is effectually closed and sealed with a gelatinous plug. The blood supply of this organ is from two chief sources (uterine and utero-ovarian arteries) and these vessels become very much enlarged during the period of gestation in order that a proper amount of blood may be brought to the young foetus and its envelopes. The mucous membrane of the uterus is voluminous and inclined to be arranged in folds, which needs to be taken into account when forming a depression during the process of extracting the semen when practicing artifical insemination.

THE VAGNIA is situated immediately back of the uterus, being underneath the rectum, and is within the pelvic cavity. It is composed of muscular fibres which extend both in a longitudinal and circular direction. The vagina then may be either shortened or constricted by muscular contractions. Its mucous membrane consists of flat cells arranged edge to edge, being known as the pavemental or squamous type. The vagina is the chief female organ of coition and communicates posteriorly with the vulva.

THE VULVA is the short entrance way to the vagina from the exterior. It is perhaps three of four inches in depth in the mare and has placed at

12. Clitoris

Note:—Os Uteri, marked "6" in the drawing, is also known as the cervix or neck of the womb. Uterine Ducts, marked "3," formerly were known as the Fallopian tubes.

its anterior termination a partial fringe or curtain which in the virgin mare usually is lacerated during the first copulation. This fringe, an irregular, half-moon shape structure, is attached to the wall at the junction of the vulva and vagina and it is known as the hymen. On the floor of the vulva at its anterior part may be found a transverse fold of mucous membrane which drops over the opening into the bladder and serves as a valve to prevent the ready entrance of material from the vagina into that organ. The opening into the bladder is termed the meatus urinae.

The external part of the vulva presents two vertical lips in the lower juncture of which is found a body called the clitoris. This body corresponds to the penis of the male and is capable of undergoing erection during sexual excitement. In those animals wherein sex is not clearly defined, that is, the animal partakes in a measure of the nature of both sexes (hermaphrodites), the clitoris frequently is found resembling a rudimentary penis. The external vulva drops forward in aged mares that have given birth to many colts on account of the continous weight of the foetus dragging these parts forward and downward.

Having read carefully through this lesson, one or more times, the student should now ask himself the following questions and find the answers thereto from the text and the accompanying drawings:

---

1. Name the most important six female organs of generation in the mare?
2. Where does fertilization usually take place?
3. In what prominent characteristic does the female cell differ from the male cell?
4. Name one part of the genital tract that distinguishes a virgin mare from one that has been served.
5. What changes take place in the cervix during pregnancy?
6. What is extra uterine gestation?
7. What peculiarity is there in the structure of the mucous membranes of the uterus, which permits it to enlarge as the foetus grows?
8. How do these folds affect the extracting of semen from the uterus?
9. What changes do the membranes of the uterus and the supporting ligaments undergo during gestation?
10. How big is an ovum?
11. When an ovum is released what organs and parts does it pass in regular order before it finally reaches the outside?
12. Name all parts and organs mentioned in the foregoing lesson and locate them on the accompanying drawing.

BARREN MARES.

In the April 5th issue of this paper an article appeared under the title of "Barren Mares." So many requests have been made for this by new subscribers that we have decided to print it in pamphlet form with the series of lessons on horse breeding for our new subscribers.

This is the most complete article that we know of, ever printed on this subject. It begins with the examination of the mare and explains the different conditions that might be present; all of the latest sucessful treatments, such as the iodine and saline solutions and the soda treatment; the effect of artifical breeding and practically everything relating to shy breeding mares. This article is worth hundreds of dollars to any man expecting to stay in the breeding business.

Barren mares are increasing every year. The breeder who does not know how to overcome these difficulties will be forced out of the business because it is not profitable to him. The time has come when he must keep up with the latest information. This paper prints more information on all horse breeding subjects, and in plain language that the average breeder can understand than all other papers and books combined.

The Greatest Stallion Show

Conformation should be better understood. The requirements of a good horse are not thoroughly established in the minds of most men interested. The lessons to be learned from having a large number of stallions of a particular class side by side, representing the entire nation, where every breeder would have an opportunity to make careful comparisons should be valuable indeed to every one interested.

To test the possibility of teaching some such lessons through the American Breeder, we put on recently what was known as the "American Breeder Jack Show." A large number of the best jacks in the country were entered and the interest manifested was wonderful. A new thought was placed before the breeders. The photograph of each animal appeared in the paper, giving a good side view, giving the height in standard measure, as well as the measurement around the bone of the foreleg at the smallest part, between the knee and ankle. Each animal was given a number in the show. Three competent judges gave their decisions designating animals by number and knowing nothing of their ownership. While their rating of the jacks did not entirely agree, they served to single out a half dozen of the better jacks, and on these our readers were asked to vote.

In the stallion show which we now propose to put on, we will take up one breed at a time, making the class for mature stallions (four years old and over). Only registered stallions will be eligible. No entrance fee will be charged. Exhibition will be made by photograph only. The photographs must be good, plain side views. They must be natural photographs and not drawings; any retouching of pictures will be barred. Each entry must give the exact height, standard measure, also the heart girth measure and bone measurement at the smallest part between the knee and the ankle. A copy of the pedigree given in the registry certificate must accompany the entry. Only sound animals can be entered in this show. In case of a complaint the owner of the stallion must submit a signed statement from a graduate veterinarian to the effect that his entry is sound in every respect. Any one failing to comply with this request will be barred from the show.

An exhibition will be held for each of the five leading draft breeds. The dates for closing the entries for each breed will be announced from time to time, the same number of days in advance in each case. It will take several months to carry out our plans for the entire show. The engravings which we will make from the photographs will be printed on extra good white paper made especially for that purpose and will be printed on only one side so that every breeder can hang up the portraits of all the entries in the different shows, side by side, and make it a wonderful educational feature. There should be hundreds of the best stallions in America represented. In our opinion this will bring together the greatest lot of instructive, up-to-date photographs of live stock ever assembled.

This will cost us a lot of money, but we believe its educational value cannot be measured in dollars and cents. Competent judges will be selected for each class of stallions. After all the draft horse exhibitions have been decided it is the intention to select from each breed a certain number and make a draft horse show open to all breeds. There will be a chance for a considerable difference in opinion as to the placing of these awards, and it is likely that we will have at least three distinct sets of judges in each class, consisting of animal husbandry men from recognized agricultural colleges, recognized leading draft horse judges, who have acquired their knowledge from the school of practical transactions, and another class who are constantly in the open market purchasing draft geldings.

This show should be a continuous school of education. There will be many things brought out that have never been presented to the public before. One of the first and most important things in the breeding of live stock is to thoroughly understand the form and qualities sought, and be able to reject such defects or malformations as are injurious or undesirable from a breeder's standpoint. Too many breeders have an idea that their judgment is perfect when it really needs training. In the end we expect all to know what a real American draft horse should look like, and what weight and quality it should have. Here we will have, in a draft horse class, several distinct breeds and among the breeds several distinct types. It is not possible that all of them can meet the practical requirements, but their study should pave the way to building an American draft horse suited to the demands of this country.

We hope every one will preserve these lessons and study them carefully. It is only within the last few years that horse breeding along the lines best suited to our farms, has been on a substantial foundation. Other breeds of horses may be taken up in their turn; possibly two or three light breeds may be taken up soon, but it is the intention to finish up the different draft horse breeds—one class for each—during the next few months.

The first class will be for registered Suffolk stallions, four years old and over. Read the coupon below, make your entry and if you have no suitable photograph arrange at once to get one.

ANSWERING BREEDING QUES TIONS.

On of the most frequently mentio facts about the American Breede the confidence our readers have our question department. In this partment are asked and answe about a thousand questions a y mostly pertaining to live stock, wh is several times as many as other publication in the country swers. We are glad to have th questions as each one is apt to be uable to many readers. Practic every reader can learn much of va from studying these questions, some problems are presented for e of the different localities.

A close study of these questions answers will save the average bree a lot of time and money. Answer many of these questions requires pert information, such as cannot obtained ordinarly in the average c munity. This is more especially with those pertaining to high cl breeding stock.

PICTURES THAT TELL YOU SO THING.

Do you want a paper that pri actual photographs of live stoc pictures that show exactly how famous prize winners look and g you a correct idea of the best type all the important breeds. The Am can Breeder does this and make specialty of it.

This fall during the live stock sh we have printed each issue from 5 100 photographs, taken at the f with special live stock cameras. M of the pictures show the animals motion, making them all the more teresting and lifelike and giving a tional information. Good judges dom make their decisions betw competing animals without see them in action, as defects which n be concealed by a "pose" are then vealed.

The American Breeder is after facts at all time—our reading mat as well as our pictures, is gotten up bring out the facts, and make th plain so that our readers "get thi straight." If you like that kind yo never quit taking the Americ Breeder.

BRING OUT YOUR SUFFOLK STALLIONS

ENTRIES CLOSE NOVEMBER 10th.

Competition in this contest is limited to mature animals—that is, stallions four years old or over. Each one, as its photo and description are received, will be given an entry number, which will be published with the picture and measurements. No names will be given out until the awards are made. Then all of the entry numbers will be published, along with the names of the stallions, and owners who entered them. Each photograph should give a straight side view of the stallion's body, but may show his head turned slightly toward the camera if the owner desires. Only a few measurements are required. The blank below shows which ones. These measurements, and a good, clear photograph will show pretty accurately to an experienced man, what the stallion is as an individual. Measurements should be taken with a tape line drawn tight enough to press tight to the skin, but not enough to press into the flesh. We reserve the right to have a committee remeasure any animal and to publish the result of its findings. Photographs can be any size, but those on which the stallion's body measures, in length, three to six inches are usually best. It is most important that they be clear and that the stallion stands straight and naturally when photographed.

Make all entries in the blank below; clip it out and mail to the American Breeder.

ENTRY BLANK FOR SUFFOLK STALLION.
American Breeder Stallion Show—Kansas City, Mo.

Enter my stallion, as follows:

Stallion's Name.....Record No.....

Height (measuring from a point level with the top of the withers straight to the ground).....inches.

Heart girth (around body just back of the forelegs).....inches.

Bone (around foreleg, smallest place between knee and ankle).....inches.

HORSE AND CATTLE BREEDING SCHOOL

November 10 to 22

The cattle breeding school, beginning November 10, and ending November 15, may be the only cattle breeding school for a year. This depends on the attendance at the next term. Those expecting to attend the cattle and hog sessions should be on hand at the next term. The instruction in cattle breeding will be valuable for all breeders. No man owning a few good cows, or expecting to engage in the business can spend a week and a little cash to a better advantage. The fine prospects for cattle breeders should encourage every one to prepare to reap the greatest benefit with the least expense. The average cattle breeder knows very little about the subjects to be taught; they have been sadly neglected.

The best instructors on horse, cattle and hog breeding are employed at this school. Everything necessary for a breeder to know in his business will be thoroughly taught, and in plain language that the average breeder can understand. Every breeder will be expected to take part in the practical work on living and dead animals, such as dissecting and diagnosing conditions. No books necessary. Everything furnished.

What do You Think of the Statements Below from Men Who Have Attended?

Oct. 2, 1913. I attended the Graham Scientific Breeding School of Kansas City, Mo., in February, 1913. I am glad of the opportunity to indorse the School. The instruction is clear and of the highest order. I would advise anyone interested in better horses and who expects to engage in horse breeding business to attend the School. I hope to attend again.—Thos. S. Young, Maryville, Mo. R. 5.

Oct. 1, 1913. I think the School is all right. It keeps a man in line so he is on the safe side. I found a good many mares that won't breed; all kinds of trouble with 30 mares; have 32 in foal with capsules. I have some capsule colts now to show, one that sold for $150.00, and that isn't the best one.—Frank A. Dutter, Breda, Ia. R. 1.

Oct. 1, 1913. I attended the Graham Scientific Breeding School in February; think it is well worth the price to any stallion or jack owner or even mare owners could profit by attending the School and following its teachings. I had good success with the capsule breeding.—Ed Little, Wakefield, Kansas.

Sept. 29, 1913. I think the Graham Breeding School is all right and I hope to attend again. I think anyone raising stock will be benefited by attending the School.—C. H. Townsend, Pine Ridge, S. Dak.

Sept. 28, 1913. I have attended the Graham Scientific Breeding School. Would not have missed the term for $100.00. This is a good moral school that every breeder should go to whether he be stallion or mare owner.—G. H. Miller, Bluffton, Mo.

Sept. 30, 1913. I am well pleased with the course of Scientific Breeding School. I can't recommend it too highly. I have settled mares this season that have been idle for three years and my patrons are well pleased and think that Capsule service is the only way to be sure.—Thos. Waldron, DeSoto, Ill.

Sept. 30, 1913. I attended Graham's Scientific Breeding School in Kansas City, Mo., from Feb. 17 to 23, 1913, and during my 39 years of practice as veterinarian, I have taken a number of special courses, but none to equal this one. Graham's Breeding School is the seat of information to any man who cares to keep abreast of the times in breeding.—A. W. Fravel, Ph.G.V.S., Centralia, Mo.

Oct. 1, 1913. I attended your Breeding School last February and learned many things of value. I have been a horse breeder for 38 years but there are things taught there that I could not learn any place else. One can not learn it all at one term. I want to attend again, although I more than got my money's worth the first term. J. N. Berry, St. Francis, Kas.

Sept. 28, 1913. I attended the Scientific Breeding School last February. Was more than pleased with the School. I don't see how a man in the stallion and jack business could stay away after being advised of its teachings. It is the greatest School in the world for all stock men. It will pay any stock man to attend the School. I would like to have been there last term, but will be there in November if nothing happens.—J. A. Swearinger, Breckenridge, Okla.

Sept. 30, 1913. I can say that I cheerfully recommend this School to be all that is claimed for it. One term of this School is worth ten times the tuition fee. Any young man, in fact every young man who has reached the age of accountability, should attend at least one term, for it fits a man and prepares him for life's battles. The character of this School is above reproach.—Clarence W. Smith, Phillipsburg, Kas.

Sept. 30, 1913. I want to say that I would not go back to the old way of breeding. Would quit the business first. I have doubled my business since attending your School. I usually breed 150 mares; this year 360. The breeders like the system. Anyone interested in the breeding of horses should attend your School.—M. B. Koffroth, Richmond, O.

Sept. 29, 1913. I am glad to recommend the Scientific Breeding School to anyone; it is the only way to breed to make the breeding business profitable; the teachings of the School are correct. I attended the February term last winter and it has made me hundreds of dollars this season. Through the teachings of the School I could breed almost all the mares that came to my barn to be bred. I was very careful not to breed any mares which were diseased; I examined all mares that came to my barn. I would breed the healthy mares. Have had splendid success. I have bred several mares which never have raised colts, and settled most of them the first time with capsules. I have settled 8 mares out of 9 bred at one service of the horse. I bred 2 mares per day this season, but hereafter I will make but 1 service per day. I want to attend the School this winter. It is the best money I ever spent. Anyone expecting to breed stock cannot afford to miss the Breeding School.—Yours truly, C. L. Crabtree, Laverne, Okla.

Sept. 29, 1913. I thing the Graham Scientific Breeding School is opening up a great money making field for stallion men. I know the lessons on Bacteria and the diseases of the womb were worth more to me than the cost of attending the School. I expect to be with you again in November for both weeks.—Yours for better methods in breeding, H. M. Stephens, Munden, Kas.

Sept. 29, 1913. I think that the Graham Scientific Breeding School is O. K. in every way, and no man can afford to miss it who has a stallion or jack. I would not take $100.00 for what I learned in the February term.—Ben Grover, St. Elizabeth, Mo.

Oct. 2, 1913. I am satisfied that the Graham Scientific Breeding School is all it claims to be and should be patronized by every stallion and mare owner who wishes to profit by breeding and saving colts from joint ills. It would be time and money well spent. I found by examining mares that there were twenty-eight per cent brought to my place diseased and unfit to breed, and which I refused to breed. I have kept tab on those mares which were bred elsewhere and the owners say they will get no colt in the spring. I expect to attend the term in November.—A. Cranshaw, Carbondale, Ill. R. 5.

Oct. 3, 1913. My only regret is that I did not take up your course of instruction sooner. Even had I never capsuled a mare, the benefit derived from examining mares and being able to separate barren mares from breeding mares and the saving of the stallion because of not breeding the barren mares many times repays the expenses of instruction.—C. F. Jones, Rippey, Ia.

Sept. 29, 1913. The Graham Scientific Breeding School is an eye opener for every man in the breeding business. I have been successful in settling mares with the capsule system, but not all. Don't know whether it was due to negligence on my part or the fault of the horse, as I have no microscope.—A. J. Wempe, Frankfort, Kans.

Oct. 2, 1913. I wish to express my appreciation of your Scientific Breeding School. The knowledge I gained while there enabled me to demonstrate the value of the capsule method. I have used the capsules, I believe successfully, with mares that refused to take the jack. I believe every man interested in the breeding of live stock, even though he does not stand a horse or jack, should attend your School if it is possible for him to do so.—J. A. B. McElroy, Rensselaer, Mo.

Oct. 1, 1913. I wish every man and boy in the United States could attend your School. I expect to attend at least one term a year. I would not take $1,000 for the knowledge I obtained and do without it. I also met the best bunch of men I ever became acquainted with. There were 125 regular pupils in my class. I was one of the 17 converted at the school at the revival we held on the night of Feb. 19, 1913. I am sure if more men knew the benefit they would receive in the breeding business as well as gaining the experience of dozens of the country's best stockmen, the School would know no bounds.—Louis A. Wilson, Logan, Ia.

The tuition fee is $25 for one or both courses. This entitles the student to return at as many terms as he cares to without further cost. The school is guaranteed to be perfectly satisfactory to the student or his tuition fee will be refunded; he alone is to be the judge. At both courses the work will begin every morning at 7:30 and last until 10:30 at night.

VOLUME 6. KANSAS CITY, OCTOBER 5, 1913. NUMBER 18.

The Finish For Crooked Work In Percherons

At a combination draft horse sale in Illinois several years ago a young man asked if it was advisable to buy a grade Percheron mare for $190 and a Percheron Society certificate from another man for $10. He was informed that he could be sent to the penitentiary for obtaining money under false pretenses. He then asked who would do it. He said that he had been informed that H. G. McMillan, president of the Percheron Society of America, and Robert Burgess of Winona, Ill., were both doing business that way.

This set the writer to thinking and making investigations. It was soon learned that H. G. McMillan, then president of the Percheron Society of America, and E. G. Wheeler of the firm of Maasdam & Wheeler at Fairfield, Ia., a director in the Percheron Society of America, had some very prolific females. It also became evident that Robert Burgess was reputed to be notoriously crooked in this respect. There were a few others, but these three firms at that particular time seemed to stand out clearly as leaders in this kind of work.

The writer talked to several men about exposing those who were employing crooked methods of doing business. One man in particular, who has had a wonderfuul lot of experience, said that it would be dangerous for any one to make mention of such facts, and especially for a new publication, because these individuals were thought to have been protected by a sort of "underground" organization among outside interests. After being thoroughly convinced that something must be done to save the honorable Percheron breeders, a campaign was started in this publication March 5, 1911. It was evident that if the president and one of the directors of the Percheron Society of America were guilty of fraudulent registration, that this was the place to begin.

While Robert Burgess has been mentioned as the crookedest man in the draft horse business, yet his offenses could not compare with those of E. G. Wheeler, to say nothing of those of H. G. McMillan, as they were respectively director and president of the Percheron Society of America at that time, while Robert Burgess had no official connection with the records. These men were betraying a trust and using their office, not only to further their own interests, but to contaminate the records for many generations to come. This was not the worst of it—it set a demoralizing and business destroying example for other men in the business, and especially for the rising generation. Other breeders who were raising honest Percheron horses said that they could not compete with such methods. Our campaign was centered on these two men, and became the most severe fight for the square deal ever waged in the history of the American live stock industry.

McMillan and Wheeler were reputed to be very wealthy; they were also in position to reach the records and treasury of the Percheron Society of America. The stockholders' money was used freely in defending them. Detectives were even hired to find evidence that would discredit this publication. In fact, everything was done that could be done to defeat or discredit the campaign this publication had begun.

At the Percheron Society election that fall an agreement was secured which gave more than could be secured by a majority vote. In addition to the regular expirations on the board E. G. Wheeler was to resign as a director and H. G. McMillan was not to be a candidate for re-election to the presidency. But he was elected and given a "whitewash," after which he resigned as president. This might make the records look good in after years but the principle of it will not be changed in the minds of men now living. Wheeler dropped out as agreed.

The American Breeder dropped the matter at that time, abiding by the agreement and hoping that the crooked work was to be stopped, but later, after taking more than a year to see whether or no the ringleaders were going to do as they promised, another campaign had to be started March 5, 1913. After the second article had appeared we were notified that H. G. McMillan would not be a candidate for re-election on the board of directors. Our assurance came in such a way as to promise speedy improvement in the policy and sentiment of the Percheron Society, and believing we could best aid the other workers in this direction by discontinuing our campaign for the time being, we did so. With the good men already on the board of directors, and the overwhelming sentiment which exists against the few crooks (as shown in many meetings and conferences the past few months) we believe conditions will continue better for all concerned if we do not again, for the present, take up this campaign.

In our second article we had called on the Percheron breeders who were in favor of clean pedigrees, to send us their votes for the candidates they wished to represent them in the election of four directors to fill the places of those whose terms are soon to expire. We believe that the four Percheron breeders and importers who led in this voting could be elected. In the state of Illinois the law and court ruling concerning corporations are not favorable, yet we believe the unidvided support of the honest men would bring victory. It would have been a hard fight and the Percheron Society would have been divided as long as it lasted. We advised with many men, both supporters and opponents. Practically every man said that if the H. G. McMillan infection could be obliterated from the system of the Percheron Society that it would not be necessary and might not be best to continue a campaign which kept reminding our readers of a baneful influence now practically dead. By dropping it a better opportunity would be given to those left in power to make right the wrongs which have been done. A lot of hard things have been said and done against this publication by men who now indorse the course we followed. This is not a personal fight. It is our business as the paper of the honest breeder and the majority to do the best we can for all honorable men interested in the Percheron Society of America.

We now have an official signed statement to the effect that H. G. McMillan has announced to members of the board of directors that he will not attempt to be a candidate for re-election. We also have the assurance of holdover members of the board of directors, and of W. S. Dunham, whose term expires, that they will use their best efforts in preventing further fraudulent registrations in the Percheron records. The situation, as we now understand it, is that W. S. Dunham and John De Lancey will be candidates for re-election and that H. G. McMillan and C. O. Keiser will not be candidates for re-election. These two places are to be filled, one from Iowa and the other from either North or South Dakota. For new directors, men are being sought who will be acceptable to a majority of the stockholders. We have had nothing to do with this program but have been informed that this will be carried out, if possible, with the aid of those in charge of the proxy committee. This may not be perfectly satisfactory to everybody, but it must be remembered that it is difficult to accomplish everything at once. Our original campaign was begun to efface H. G. McMillan and E. G. Wheeler from the affairs of the Percheron Society, and when this is done the American Breeder will feel that it has finished a good job.

We have always had confidence in the honesty of live stock breeders when they have had an opportunity to thoroughly understand the situation. Many breeders were greatly surprised when these exposures were made. These same breeders might be even more surprised (if they have not already realized it) when they study the situation enough to understand that most of the crooked work in draft horse pedigrees has been facilitated by the favorable attitude toward its perpetrators, of a powerful but unscrupulous live stock paper.

This feature, in all its bearings, is worthy of a lot of thought on the part of all classes of breeders. The three offending firms mentioned in this article, for instance, have been boosted, and their business kept up under the protection and policy of the above mentioned journal. The very heart of the live stock industry has been attacked; the very influence that was looked to, by many, for supporting the right, has been used to mislead the people for the sake of power, place or money. It is one saving feature of this disgusting example that practically no other agricultural paper of importance took an active part in upholding the hands of the crooks.

The injury done to the Percheron breed of horses by such a publication can never be measured in dollars and cents. It is not merely the immediate purchaser who will suffer, but those owning the progeny for several generations will feel the effects of these betrayals of the readers' confidence. Fortunately many of the animals from doubtful sources have been, and are being sold without pedigrees—the owners became ashamed of them and the records are thus automatically cleaning themselves to some extent.

No charges have ever been brought against C. O. Keiser as far as we know. His other interests are consuming his time and he does not handle many Percheron horses. The name of Keiser Bros. of Keota, Ia., has been associated with the improvement in Percheron horses for a great many years. Their reputation will go down in the history of the Percheron breed as good, for they have given much support to its development.

There are more than 100,000 breeders who are actually engaged in horse production and improvement. These men hold the key to the situation. These men constitute one of the most independent and influential classes in the country if they only realized it. There are not many of them who would care to buy an animal with a pedigree which is fraudulent. The remedy which this great class of breeders hold in their power to apply is for every man, regardless of the kind of live stock he handles, to appoint himself as a committee of one to direct every buyer of horses away from the crooks. Every individual should consider it his especial duty to go out of the way to see his friends or neighbors, or call them over the telephone, and keep them from buying an aniaml that comes from the hands of a crook. Every man that buys a mare from a crook will be forced to sell the progeny. In after years breeders are going to be more familiar with pedigrees. It would be disastrous indeed to contaminate a herd with this questionable blood.

Most breeders who buy a stallion many want to sell it again in a few years and get another one to take its place. If its certificate bears the name of one of these crooks as being the breeder the animal will not be worth as much money, because these pedigrees are going to be discriminated against more and more each year. Their undesirability will become common history. Who would care to have a prospective buyer say:

"I don't want that animal; that is a McMillan pedigree, or a Wheeler or a Burgess animal."

This campaign does not interest Percheron breeders exclusively; it concerns every man interested in honest methods. If every man will do his duty and make it a point to steer the purchasers away from men who are favorable to crooked pedigrees, they can not stay in business. When the profit is removed these men will be driven out because they are after the almighty dollar only. They have no real friendship for the breed, or for

MORE LIVE STOCK NEEDED.

Can anyone fail to understand what the ultimate condition must be on a tract of land where everything is taken off and nothing put back?

Production in different sections of this great country has experienced many changes. A section that was very productive during the last generation is now spoken of as very inferior land. Those early settlers were of the opinion that this land would last forever. The next generation followed in the footsteps of the forefathers. This depletion has been quietly going on. Only a few have realized, so gradual has been the change.

In another section, which was known as "Poverty Ridge" within the memory of the present generation, has made a wonderful change in its soil and production. During the early history of this land, when there were no fences and the stock was herded, the drovers were instructed not to let their stock drift over to that section of the country as the grass was not good; also that it would not last during the heated spell of the summer, and could not be depended on. Gradually the settlers encroached and the border of this land was eventually completely settled with a class of good German farmers.

German farmers seldom settle on poor land. A few farms in that district had proven the value of manure on this land. These inhabitants saw the opportunity for "mixed" farming and rotation of crops, backed up with live stock. This section is now one of the best producing parts of this great country. It is the general policy of the inhabitants of any certain section which spells improvement or disaster. The plan followed by the forefathers is, in too many cases, successively adopted on down through the different generations.

In practically every section of this broad, fertile prairie it has been demonstrated in the long run that live stock and mixed farming is a success, as a rule.

There are things that can be done to benefit the soil that are being studied closer today, but no other one practice can do more for the productiveness of this country, as a whole, than to produce more good live stock of the right kind. For the good of the whole country, as well as of the farmer and the land, it is imperative that conditions should make always possible a fair profit to the capable stock grower. When this is done, and people learn generally (as they now are learning) that there is an additional profit to the land owner through the stopping of soil depletion, we will be on the road to a permanent agriculture, an absolute essential in national welfare.

MARKETING LIVE STOCK.

A continuation in the live stock industry must finally depend entirely on the profits received by the producer. There are many who enjoy growing live stock, but the financial end must be satisfactory before they can be induced to do so. They must see ahead of them a satisfactory market.

Too many breeders have grown live stock without any plans for the future. They do not know what market they are trying to supply. Pure bred breeders have an advantage in this respect; there is a great demand for superior animals in practically every breed of live stock. There are individuals who are searching the country for them, but those who are producing live stock either for labor or for food, should study the proposition as to when a certain market should be at its best. A lot of money is lost each year from owners being compelled to hold stock too long, or from their not having it ready for a particular market.

Practically all classes of live stock have a selling season that should be kept in mind. If the animal is a little thin it may require a little more time to have it in a prime condition at a particular date. Some classes of stock will warrant the expense of a long feed, giving a particular degree of finish. In other classes, no matter how much feed is consumed, there will be little advantage, and in too many cases a real loss. For the class of stock at best is inferior and will not meet the requirements of a good market.

With the average individual engaged in growing live stock, it is usually in a thin condition that animals leave the producers' hands. Those handling only a small number may not have the incentive to study upon fattening methods. Those who dispose of very thin stock are usually the losers. Stock of any kind makes a better appearance and finds a more ready market when in good flesh. This is true of both food and working animals. Farmers and breeders should strive to have as much stock fed on their lands as possible. It means soil fertility and has a money consideration for the owner of the land.

The fleshing of animals gives the breeder an opportunity to learn which animals have the most value when in prime condition. Utility must not be lost sight of in either production or market.

APPRECIATION OF FINE ANIMALS.

A few weeks at the state fairs each fall has made the annual addition to the already overwhelmingly proven fact that well bred live stock attracts well bred people. Around any ring side where high class animals of any sort are being exhibited is a common ground on which people from every walk of life meet and feel a common interest. Some surprise was expressed at the Iowa State Fair, early this fall when LeRoy Pelletier, advertising manager of the Maxwell Motor Company, purchased some of the best Shetland ponies ever shown there, including Tutsie D., a winner as a colt, yearling, two and three-year-old. But rather than its being cause for surprise we think it most that a man who knows perfection in machinery and mechanical proportions should admire such a wonderful little piece of animal mechanism as a Shetland pony.

In a wide circle of acquaintances among breeders of fine stock are many of the best judges and operators we know, not only of antomobiles, but of other motor machinery. Conversely (or likewise, if you choose) Mr. Pelletier, an automobile expert, is also a skilled horseman, and owns, by the way, the noted saddle stallion, Monte Mark 1249, which he keeps (and rides) on his Michigan farm where the Shetland stud is now being establshed.

IS CAPSULE BREEDING A SUCCESS?

Last spring a graduate of the Graham Scientific Breeding School wrote this office that he had bred 64 mares with capsules and only got 27 of them with foal. He seemed to be very much discouraged, as it was being reported that the capsule system was a failure with him. It was being talked over the country that the method would be a failure. This was especially emphasized among those owning inferior stallions.

This breeder attended the breeding school in 1912 and immediately put the scientific methods into practice. We wrote him to make a careful investigation concerning all of the mares and to give us the details of his work. He bred two mares one day by natural service; every other day was capsule breeding day, and he only made one service on those days. He bred 97 mares with natural service and secured 84 living colts from the natural service. By having the capsule system he had an opportunity to breed the difficult ones by that method. This allowed him the opportunity of selecting producing mares for natural service. By having nine natural services a week, a good number were bred by that method.

Breeding with capsules did not interfere with the natural service in any way. On the days when mares were bred with capsules a clean, healthy mare was bred with the natural service from which the semen was obtained; the surplus semen used was all profit. Out of the 27 mares having colts from capsule service about 20 of those had been bred repeatedly from one to three years without producing any results.

When it was announced that the capsule system would be employed at this barn it attracted the attention of men from a great distance who had unfruitful mares. This breeder made a serious mistake by encouraging so many of these doubtful animals during the first year. He can largely overcome this by getting a signed statement from the owners of those mares which have colts from capsule service. When it is generally understood that these mares were not supposed to be producers, yet nearly half of those bred with capsules did produce living foals, it will make a great difference in that community. This individual produced a much greater per cent of foals out of those shy breeding mares than the average breeder gets by natural service. This breeder also made a mistake by not informing many of these owners that it would be very doubtful if his mare got with foal. These men must understand that a mare must be in good condition to produce a colt. The stallion cannot do it alone, either with or without the capsule.

This particular breeder was greatly discouraged and about ready to quit trying to use the capsules any more. So many men had made it their business to condemn this system that he had begun to think that it was a failure.

In looking over the books from this particular stallion for four years before the capsule system was adopted it was found that an average of 53 colts was produced, the highest of any one year was 62. From his 1912 breeding with capsules and natural service and a better judgment as to the condition of the mares, he produced 111 colts, being more than double the average of the four years preceding. The few good mares that were bred with capsules gave good results. This stallion is now on a substantial basis. In 1913 about one-third more mares were bred than the spring before and there has been very little objection to using the capsule system. When a hundred or more colts are produced at $15 each, it nets a good revenue. Next season this breeder will stand his stallion at $10 and expects to breed 500 mares by making three stands.

It is not wise to get discouraged too quickly. Success in any substantial proposition frequently requires time and effort.

OUR ADVERTISEMENTS

represent firms and articles that we believe to be reliable.

We refuse all whisky and beer advertising and all advertising of medical nostrums and questionable medicines, and medical institutions. We refuse all "get-rich-quick" scheme advertising, fake jewelry, and cheap, sensational book and music advertising. We refuse to carry the advertising of live stock breeders and importers who have become notorious for crooked or disreputable practices.

This advertising, such as we refuse, pays the highest rate to the papers that will take it, and "asks no questions." When you see this kind of business in big, well-established, money-making papers, therefore, you have some idea of the income the American Breeder sacrifices in refusing to carry it.

If you believe we are doing right and deserve your cooperation, investigate the institutions and firms for which we do advertise, write for their catalogs, buy from them when you can, and always mention the American Breeder.

Remember that the prices and quality of advertised goods are more sure to be right than any others, for advertised goods are sold faster, sold more direct, and sold in more open competition than any others.

The Greatest Stallion Show

Conformation should be better understood. The requirements of a good horse are not thoroughly established in the minds of most men interested. The lessons to be learned from having a large number of stallions of a particular class side by side, representing the entire nation, where every breeder would have an opportunity to make careful comparisons should be valuable indeed to every one interested.

To test the possibility of teaching some such lessons through the American Breeder, we put on recently what was known as the "American Breeder Jack Show." A large number of the best jacks in the country were entered and the interest manifested was wonderful. A new thought was placed before the breeders. The photograph of each animal appeared in the paper, giving a good side view, giving the height in standard measure, as well as the measurement around the bone of the foreleg at the smallest part, between the knee and ankle. Each animal was given a number in the show. Three competent judges gave their decisions designating animals by number and knowing nothing of their ownership. While their rating of the jacks did not entirely agree, they served to single out a half dozen of the better jacks, and on these our readers were asked to vote.

In the stallion show which we now propose to put on, we will take up one breed at a time, making the class for mature stallions (four years old and over). Only registered stallions will be eligible. No entrance fee will be charged. Exhibition will be made by photograph only. The photographs must be good, plain side views. They must be natural photographs and not drawings; any retouching of pictures will be barred. Each entry must give the exact height, standard measure, also the heart girth measure and bone measurement at the smallest part between the knee and the ankle. A copy of the pedigree given in the registry certificate must accompany the entry. Only sound animals can be entered in this show. In case of a complaint the owner of the stallion must submit a signed statement from a graduate veterinarian to the effect that his entry is sound in every respect. Any one failing to comply with this request will be barred from the show.

An exhibition will be held for each of the five leading draft breeds. The dates for closing the entries for each breed will be announced from time to time, the same number of days in advance in each case. It will take several months to carry out our plans for the entire show. The engravings which we will make from the photographs will be printed on extra good white paper made especially for that purpose and will be printed on only one side so that every breeder can hang up the portraits of all the entries in the different shows, side by side, and make it a wonderful educational feature. There should be hundreds of the best stallions in America represented. In our opinion this will bring together the greatest lot of instructive, up-to-date photographs of live stock ever assembled.

This will cost us a lot of money, but we believe its educational value cannot be measured in dollars and cents. Competent judges will be selected for each class of stallions. After all the draft horse exhibitions have been decided it is the intention to select from each breed a certain number and make a draft horse show open to all breeds. There will be a chance for a considerable difference in opinion as to the placing of these awards, and it is likely that we will have at least three distinct sets of judges in each class, consisting of animal husbandry men from recognized agricultural colleges, recognized leading draft horse judges, who have acquired their knowledge from the school of practical transactions, and another class who are constantly in the open market purchasing draft geldings.

This show should be a continuous school of education. There will be many things brought out that have never been presented to the public before. One of the first and most important things in the breeding of live stock is to thoroughly understand the form and qualities sought, and be able to reject such defects or malformations as are injurious or undesirable from a breeder's standpoint. Too many breeders have an idea that their judgment is perfect when it really needs training. In the end we expect all to know what a real American draft horse should look like, and what weight and quality it should have. Here we will have, in a draft horse class, several distinct breeds and among the breeds several distinct types. It is not possible that all of them can meet the practical requirements, but their study should pave the way to building an American draft horse suited to the demands of this country.

We hope every one will preserve these lessons and study them carefully. It is only within the last few years that horse breeding along the lines best suited to our farms, has been on a substantial foundation. Other breeds of horses may be taken up in their turn; possibly two or three light breeds may be taken up soon, but it is the intention to finish up the difficult draft horse breeds—one class for each—during the next few months.

The first class will be for registered Suffolk stallions, four years old and over. Read the coupon below, make your entry and if you have no suitable photograph arrange at once to get one.

Do you know
The Youth's Companion
as it is to-day?

Improved and broadened in its scope. Enlarged by the addition of a Special Family Page, Boys' Page, Girls' Page and Children's Page. Great serial stories, 250 short stories. A remarkable Editorial Page. Current Events and Science. A wealth of variety and quality, and all of it *the best.*

FREE TO JAN. 1914
Cut this out and send it with $2.00 for The Companion for 1914, and we will send FREE all the issues for the remaining weeks of 1913 and The Youth's Companion Practical Home Calendar for 1914.
THE YOUTH'S COMPANION, BOSTON, MASS.

Illustrated Announcement for 1914 free on request.

Remember — 52 Times a Year, Not 12

Great Family Combination Offer

We do not know of any Family Weekly that we can more heartily recommend to our readers than The Youth's Companion. It gives us pleasure, therefore, to announce that we have arranged with the publishers to make the following offer.

The American Breeder Regular $1
The Youth's Companion Price $2
Both Papers Together For One Year
$2.50

TO TAKE ADVANTAGE OF THIS CLUB RATE, SEND ALL SUBSCRIPTIONS TO THIS OFFICE, ADDRESSING AMERICAN BREEDER, 225 WEST 12TH STREET, KANSAS CITY, MO.

BRING OUT YOUR SUFFOLK STALLIONS

ENTRIES CLOSE NOVEMBER 10th.

Competition in this contest is limited to mature animals—that is, stallions four years old or over. Each one, as its photo and description are received, will be given an entry number, which will be published with the picture and measurements. No names will be given out until the awards are made. Then all of the entry numbers will be published, along with the names of the stallions, and owners who entered them. Each photograph should give a straight side view of the stallion's body, but may show his head turned slightly toward the camera if the owner desires. Only a few measurements are required. The blank below shows which ones. These measurements, and a good, clear photograph will show pretty accurately to an experienced man, what the stallion is as an individual. Measurements should be taken with a tape line drawn tight enough to press tight to the skin, but not enough to press into the flesh. We reserve the right to have a committee remeasure any animal and to publish the result of its findings. Photographs can be any size, but those on which the stallion's body measures, in length, three to six inches are usually best. It is most important that they be clear and that the stallion stands straight and naturally when photographed.

Make all entries in the blank below; clip it out and mail to the American Breeder.

ENTRY BLANK FOR SUFFOLK STALLION.
American Breeder Stallion Show—Kansas City, Mo.

Enter my stallion, as follows:

Stallion's Name.....Record No. .....

Height (measuring from a point level with the top of the withers straight to the ground).....inches.

Heart girth (around body just back of the forelegs).....inches.

Bone (around foreleg, smallest place between knee and ankle) .....inches.

Owner's Name..... County.....

Postoffice ..... State.....

BEFORE YOU GO TO A *Business College*

I want to talk to you either personally or by letter. I want to tell you what I will do for you. I want to tell you something of the aims, aspirations and ideals of my institution, and the work I am doing for **better business training.** I want to tell you how I will help you. No matter where you live—no matter what your financial condition. If you are earnest, ambitious, honest and really want to learn **Shorthand, Typewriting, Bookkeeping, Penmanship, Salesmanship** or other **Commercial Branches,** write me today for my **new catalog** and let me tell you how I can help you realize your ambitions on terms to suit yourself. Students assisted to a place to work outside of school hours for room and board. Address me personally. **C. W. RANSOM, Pres.**

Kansas City, Mo.

900 HIGH SCHOOLS IN OHIO ARE TEACHING AGRICULTURE.

One of the agricultural supervisors of Ohio has recently stated that after a year and a half of the law requiring agriculture to be taught in the common schools of that state, more than 900 high schools are teaching agriculture and more than a half million boys and girls are studying the subject in the public schools. It is estimated that about 4,000 Ohio teachers took work in agriculture in the summer schools last season.

Better American Drafters

Bunching Stallion Colts for Sale to Breeders, Importers or Feeders Who Will Properly Grow Them Out. A Free Service to Readers That Will Educate Demand.

This country ought to make a greater effort to produce more and better registered draft stallions. Millions of dollars are going out of this country that should be spent with the American breeders and farmers. More encouragement should be given to the American breeder; his business should be made more profitable. When we consider that only about 8 per cent of the stallions standing for public service in this country are registered draft stallions (and a very large per cent of those are not suitable for such purpose), we see that after all very little development has been made in this direction.

An already great demand for the big, rugged draft gelding is increasing. The year 1913 will go down in history as having brought the highest prices ever paid for big draft geldings. This is causing, and will continue to cause, a wonderful market for the right kind of stallions. Men who have made a life study of the situation contend that it will be years before this demand will be supplied by both the American breeder and the importers working together. This demand may never be supplied unless the American breeders pay more attention to the selection of better sires and to thoroughly developing their colts. In foreign countries the colts are better developed. Breeders are not as well fixed for developing the colts as the American breeders, but they know that a few dollars worth of extra feed and a suitable place is money well spent.

At weaning time the colts are usually bunched, from 10 to 20 head at a place, so they may be found when buyers are looking for them. Why not bunch them in this country? A breeder having a few colts can very easily buy a few more and prepare for their development. This development should start as early as possible. The draft horse size is not easily maintained except by using the best sires and fully developing the progeny. The largest and the best bred herd of horses in this or any other country will diminish in size and weight very rapidly when the progeny is only partially fed and cared for.

We should like to see the breeders trade among themselves and learn the value of these colts at weaning time. The breeder who is in a position to handle these colts can add a few more to his number and have enough of this class of stock to make it more profitable. The best manner of handling these stud colts is to have a large enclosure of several acres, or a large pasture, fenced stallion tight, with an outside fence around it so that no other animal could get close. A large shed should be erected with several openings on the south side so that the sun could shine in and they could run in and out at their leisure. A manger should be built in this inclosure so that in stormy weather it would not be necessary for the colts to expose themselves. Another rack should be built outside in a high, dry place where they could enjoy the fresh air and sunshine. This enclosure should be large enough so that it would not tramp up and get filthy. It might be necessary to cement a part of the ground in the vicinity of the outside hay rack and feed bunks.

Plenty of suitable grain and nutritious hay, with a good water supply and plenty of freedom will develop these colts very rapidly. If no other stock is allowed to interfere with this group of colts they can be successfully kept together under this plan until 30 months of age. Too many breeders put a halter on a stud colt as soon as it begins to show a little masculinity. It is then tied by the head and kept without any exercise. No kind of young live stock can be raised successfully with this plan. Don't forget the value of exercise, fresh air, sunshine and kindness while developing young stock. These are all necessary and very cheap.

In communication with an importer a few days ago the writer was informed that he (the importer) would buy 100 head of good registered draft colts but that he could not find them. He had traveled here and there, had written letters but had purchased only a few after having spent several months in the attempt. He further stated that his time was worth too much money to go to look at one colt. Too frequently where only one or two colts could be found at a place they were not sufficiently developed.

The buyers are looking for large stallions. There is not a very good demand for the little ones. He also made mention of the fact that the owner of a good registered mare felt discouraged when he could not offer him a good price for a stunted colt.

If the importer, dealer and large breeder knew where to go to look at 10, 15 or 20 head of good, well developed 2 or 3-year-old stallions there would be a big improvement in home-bred draft horses. The imported horses are getting higher and scarcer. Many other countries are competing for this stock. There are more Percheron horses in this country than all other breeds combined. The biggest demand for imported horses are for Percherons. The Percheron district of France is very small; it can supply only a certain number. Other nations supplying their wants from that small district greatly interferes with the importation of Percheron horses to this country. In the course of time American breeders must supply this deficiency. Posted breeders state that in their opinion it will be necessary to import new blood for a great many years. There is also a tendency among some classes to buy imported horses because they are recognized by the Bureau of Animal Industry.

The American Breeder wishes to be of as much service as possible to the draft horse breeder and encourage the development and the business of bunch and developing of registered draft colts. We are going to give the location of these colts free of charge for the subscribers of the American Breeder. We want all of our readers to fill out the blank below. We will classify all the offerings by states, giving the country and town of each, so that a breeder, dealer or importer can find the colts that are advertised in the vicinity of one town or in the county. This service will be first given in connection with Percherons. Any breeder who makes a misstatement concerning the stud colts he has will not have another opportunity of this kind. The reason we are limiting this information to stud colts is to get them bunched while young and in the hands of men who know how and will thoroughly develop them. This will also give opportunity to select some of the best individuals and prepare them for the large draft horse shows and give the American breeders more opportunity to see what home-bred draft horses look like when thoroughly developed.

Those who are not subscribers to the American Breeder can enclose $1 for the subscription along with the blank below and be admitted to this free service. Fill out the blank below:

I have ..... head of sound Percheron stud colts, less than 1 year of age, registered or registerable in the Percheron Society of America, which I am willing to sell at a fair market value. Please announce this free to the readers of the American Breeder.

Name .....

Town .....

County ..... State .....

This coupon, properly filled out, must reach the American Breeder before November 10.

Enrich Yourself

Supplying a Great Demand

The price of beef is steadily rising, due to the shortage of beef cattle. It is no longer profitable to raise cattle on ranges. That was a wasteful method, and with the passing of free pasturage the costs are too great to leave a profit. Yet people need beef and are willing to pay good prices to get it. That is the demand you may profit by supplying.

Search all over this continent and you will find no section in which cattle do as well or can be raised as cheaply as on the plains of northwest Texas. It is the natural home of the steer. Here great herds roamed in the early days. They fed on the luxurious grasses and went to market without grain. Latterly their weights and the owners' profits have been increased by grain-feeding near to the slaughtering market. But that is now too expensive, considering the high price of corn.

It has been found that the steer can be fed and finished here on ensilage and milo and kafir grain. The cost of feeding is reduced — the quality of the meat improved — a better price is secured and once again beef cattle are money-makers.

The territory available for this work is the millions of acres of northwest Texas, where the rainfall is less than twenty inches a year. It is too dry for corn, but milo and kafir thrive under dry-farming methods.

Herefords are graded up to nearly pure blood and they are the most profitable animal to feed. Weanlings can be brought up to 1,400-pound steers in less than three years, and this young beef sells well, saving a year's time, interest and feed.

Hogs thrive on the same feed. This is their climate, too, as there are no diseases in the high, dry air.

Lately it has been found that upward of one million acres of this fertile prairie is underlaid with an inexhaustible supply of pure water, near enough to the surface to be economically pumped and used for irrigation. This water makes the production of tremendous crops of feed easy and certain. With water, 50 bushels of wheat, 100 bushels of oats and 80 bushels of kafir are not unusual yields, and a small acreage of the irrigated land with a larger area of the dry land forms an ideal stock farm. Irrigation here means stock-feed insurance and is a guarantee of your profit.

The opportunity here is described in detail in a new folder just issued by the Santa Fe entitled "The Shallow Water Country of Northwest Texas." I would like every stock-grower in the country to read it as well as our leaflet, "Letters from Farmers." Then, if you are interested in following the matter further, I will be glad to place at your service the faculties of this department to assist you in finding the location best adapted to your needs.

The interest of the Santa Fe in settlers along its lines does not cease with helping them to select a location. We have a corps of agricultural demonstrators, who are employed by the railroad to help settlers to learn as quickly as possible the best crops and methods of handling for any given section. The assistance of these men will be yours without cost, and the enthusiastic letters from settlers already here will show you that their advice means a large increase of profit to those who have taken advantage of it.

Drop me a postal for this "Northwest Texas" folder and leaflet.
C. L. Seagraves, General Colonization Agent, A. T. & S. F. Ry,
2511 Railway Exchange, Chicago.

Now is the time—

to make a trip to Texas and see just where *your* opportunity lies.

The price of good, rich land in Texas is so low that you can own a big farm there without investing much money or mortgaging the place. The land will raise as big or bigger crops than you are now raising, and you will get better prices for what you raise.

Ask your local agent to sell you a ticket via the Katy—or tell me where you want to go and I'll plan your trip, and give you full information about the *low homeseeker's excursion fares* on the first and third Tuesdays of each month.

I will also send you our free books on Texas opportunities if you want them. Write today.

TEN YEARS IN FOOD PRODUCTS.

Following are some of the increases in the retail prices of food products, made during the last ten years in the United States, as reported by the Department of Commerce and Labor recently:

Sugar 6 per cent, butter 34, milk 35, flour 35, potatoes 46, eggs, 47, lard 57, hens 39, sirloin steak 62, ham 63, rib roasts 63, corn meal 64, round steak 86, smoked bacon 100 and pork chops 105.

The comparisons are based on figures obtained in August, 1912, in thirty-nine cities. Between August, 1911, and August, 1912, only two things decreased in price—potatoes and sugar; everything else advanced.

Meat Supply Main Feature

Southern Outlet For Cheaper Horses About Closed For Season. Drafter Demand Waits on Winter. All Cattle to High Levels. Hogs Holding Against Packers' Pressure. Sheep Up.

Chicago was more distressed than other markets, but that was due entirely to heavy receipts. There more good, heavy drafters were offered than at any previous time this year, and demand ran to rugged workers, chunks and expressers. St. Louis and Kansas City reported a dependable Southern inquiry and a good many horses and mules were cleared in that direction that showed better quality and weight than usual. The usual number of common horses were offered and they showed normal uncertainty in prices. Some thin horses and mules were bought for feed lots, and that gave the trade a fairly active tone for a time, but with that outlet filled trade became dull again.

Nowithstanding the recent decline in prices, dealers say they see nothing that would cause any prolonged dullness in the trade. Rains in the South have been exceedingly heavy for September, and in the corn and wheat belt the fall work is proceeding busily. This in a way has restricted trade, as in many places it was too wet for plowing, gathering cotton, or moving crops of any kinds. Some buyers who had urgent orders ten days ago were requested to let them hold over until more settled weather appeared and farm activities were resumed.

Rains have helped pastures and brought on additional rough feed. Consequently there is a disposition to hold out young horses and mules. This will relieve the market of a certain pressure that appeared imminent a few weeks ago. With an open winter practically all the young horses and mules on farms can be carried through a little expense. In the Northwest practically three-fourths of the horses are permitted to get their own living during the winter by digging for it under the snow, and animals worked all summer are said to be in better condition in the sprmg than they were when turned out in the late fall. It is not wise to give native horses such a test, but that shows the rustling powers of a healthy animal.

Horsemen say that since all conditions in trade lines are assuming normal proportions a better feeling will extend to the horse and mule market. The cotton belt has a smaller crop this year than last, but in total amount of money received it will be worth more than last year's crop. In the grain belt there is no great disposition to turn horses for ready cash, and the general marketing thus far seems to be of the surplus or the proper trade supply. October is expected to develop increased demand.

The following quotations are for serviceably sound horses and mules 4 to 7 years old:

Horses—	
Draft, choice, 1,600 lbs. up	$270@325
Drafters, fair to good	180@250
Chunks, good to choice	160@200
Chunks, fair to good	125@165
Expressers and light draft	80@145
Plain workers	50@ 85
Southerns, good	160@185
Southerns, plain to fair	85@155
Plugs	20@ 60
Mules—	
13 to 14 hands	$ 90@110
14 to 15½ hands	125@175
15½ to 16 hands	170@235
16 to 16½ hands	230@300

Prime Steers Are Higher.

The past week prime steers were higher than at any previous time this year. Some 1,070 to 1,100-pound yearlings from Nebraska sold at $9.35 to $9.55, and steers weighing close to 1,600 pounds sold as high as $9.20 in Kansas City. The top price in Chicago was $9.50 and there was a big showing there above $9.25. Such prices, of course, apply only to the best offerings, though finish seems to be more of an attraction than quality. Some South Dakota steers unusually fat from grass sold as high as $9. Prices for the best fat steers are 25 to 40 cents higher than two weeks ago. The class of steers selling at $8.25 to $8.75 are about steady, and the plainer kinds are lower.

With the cessation of drought pressure the movement of cattle has broadened from dry localities to include practically the entire West and Southwest. Texas, Colorado and the Northwest states are offering grassers freely, and steers seasonably fat are coming from Missouri and Kansas. Both Kansas and Missouri are buying thin cattle, but for the most part their demand is for kinds that can be carried through the winter on rough feed. Receipts have shown liberality and in the past two weeks were only slightly less than a year ago. Packers are buying freely and there is a good demand from shipping sources. Wholesale prices of beef remained firm, but next week will see an advance, based on the higher cost of cattle live weight. From below the quarantine line receipts have been moderate and quality plain. Most of them sold at $5.75 to $6.85. Western steers on the native side sold at $6.25 to $8.40. A twenty-three-car shipment of Texas grazed Old Mexico steers brought $6.60.

Quotations for the various grades of killing steers are as follows:

Prime corn fat steers	$9.00@9.55
Good to choice steers	8.50@9.00
Fair to good steers	8.00@8.45
Common to fair steers	6.25@7.95
Meal fed, choice	7.75@8.65
Meal fed, common to fair	6.50@7.70
Quarantine steers	5.00@8.25

Advancing Butcher Cattle Prices.

Demand for butcher cattle continues urgent and prices are rising. In the past two weeks they were quoted up 25 to 40 cents, the principal advance being on Western cows. A nine-car load bunch of 727-pound cows from San Angelo, Texas, brought $5.45 and Panhandle, Colorado and Kansas grazed offerings sold as high as $6.50. Such prices did not excite more than ordinary comment, but they are nearly three times what grassers brought a few years ago. Heifers were scarce and higher. No finished stuff offered. Top sales were up to $8.65, but that is not the limit of the market for prime grades. Veal calves are selling up to $9.75 at Missouri river markets and up to $11.50 in Chicago. Bulls are in active demand.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice	$6.50@7.15
Fair to good	5.50@6.45
Common to fair	5.00@5.50
Canners	4.00@4.85
Heifers—	
Choice fed	8.50@9.00
Good to choice	7.75@8.40
Plain to fair	6.50@7.70
Common	5.50@6.50
Veal calves	6.00@9.75
Bulls	4.25@7.00

Stockers Highest This Year.

Selected stockers and feeders this past week sold at $8 to $8.50, and with the top on fat cattle ranging only about $1 higher, it looks as though the price limit for thin cattle has been reached. Many are holding off buying because they think prices dangerously high, but at present there is no sign of a let up in demand or no reason to anticipate a decided drop in prices. Few stockers and feeders are selling below $7. Stock cows sold up to $6.50, and stock heifers up to $7.40, and stock calves $8.50.

The following quotations are for stock and feeding table:

Selected feeders	$ 8.00@ 8.50
Plain to fair feeders	7.00@ 7.50
Good to choice feeders	7.55@ 7.95
Selected stockers	8.00@ 8.50
Good to choice stockers	7.40@ 7.95
Plain to fair stockers	6.50@ 7.35

RENTAL PROPERTY FOR PONIES

Owner will exchange good rental property, five room cottage, best residence portion of Kansas City, for Shetland ponies. Equity $1,250.
Box 192, Pawnee, Okla.

15,000 Acre Hog and Cattle

Ranch in North Texas. Plenty of water; plenty of acorns; plenty of pastures; 34 houses. A bargain if sold quickly. Easy terms.
T. M. KELL, VERNON, TEXAS.

Alfalfa As a Money Maker

Rich alluvial soil is what is wanted for the successful growing of Alfalfa, the king of forage crops. The Red River Valley has this kind of soil in abundance—nothing better anywhere. We can recommend this land to well-to-do farmers who want something really good. Ample rainfall.

A Crop Every Year

160 ACRE FARM FOR SALE.

I have moved to town to take up the breeding business exclusively and will sell my farm located 4½ miles from town of two railroads, Missouri Pacific and Atchison, Topeka & Santa Fe. All bottom land; black sandy loam. Spring creek passes through middle of farm; two wells of good water in abundance; 40 acres in alfalfa, fenced hog tight; every acre first class alfalfa land; 8 room house; large cellar; good orchard; grade school; school wagon run by district. Two story barn with basement; lots of grain room; big hedge on outside lines. Farm well arranged for two 80 acre homes, or 240 acres of cheap upland pasture may be had in connection, making an ideal stock farm. Price, $10,000 if sold soon. Will carry $3,500 at six per cent. Address,
H. H. BURNS,
Argonia, Sumner County, Kansas.

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay

Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000

for erecting your buildings, fencing, sinking well and breaking. You have twenty years in which to repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based On Good Land

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps. Write today.

Hog Prices Still Fluctuating.

The hog market still keeps to a well defined rut. Price movements in the past two weeks were within the range of the preceding two weeks, and about the only noticeable change was that quality improved moderately. Instead of the movement of common underweight hogs subsiding with improved weather conditions, as had been expected, they are coming now because farmers are trying to get away from a feed bill. The run includes a good many "piggy" sows and rough heavy hogs that would have been held for stock purposes or fed for the winter market had corn been more plentiful. Shippers are aiding in the fluctuating prices with an intermittent demand. The chief efforts of the packers has been to keep the average cost of droves below $8.50, and they prefer to sacrifice quality to going above that price. Iowa and Nebraska are having some trouble with cholera, but otherwise there is little general sickness among hogs.

The following table shows prices for hogs in Kansas City in the past two weeks:

Mon., Sep. 29..	$8.25@8.65	$8.35@8.70
Tuesday	8.30@8.65	8.30@8.72½
Wednesday	8.15@8.60	8.15@8.62½
Thursday	8.20@8.60	8.10@8.50
Friday	8.25@8.65	8.15@8.57½
Saturday	.....	8.30@8.55

The following quotations are for hogs:

Choice, 250@300 lbs.....	$8.25@8.50
Choice, 200@245 lbs.....	8.35@8.65
Medium weight	8.10@8.60
Light weight	7.50@8.50
Common to fair	5.40@7.80
Stags.	5.50@8.00
Boars.	3.75@6.25
Pigs.	4.25@5.75
Bulk of sales	8.25@8.50

Stronger Sheep Prices.

The Northwest sheep movement seems to be subsiding. Last week it reached maximum proportions at 450,000, and this week fell short of 400,000. Sheep men believe that a good many more will be marketed from the Northwest, but not in such large numbers as last week. Prices have held firm and in the past few days made slight net gains. Choice fat lambs are quoted at $7 to $7.40, yearlings $5 to $5.75, wethers $4.25 to $4.75, and ewes $4 to $4 50. Most of the feeding lambs are bringing $5.50 to $6.60.

September Live Stock Receipts.

The dry weather of late summer and early September swelled Kansas City receipts of cattle to 374,000, or 52,000 more than in September, 1912. Other markets held near normal to decreased receipts and total receipts at the five Western markets were 947,500, compared with 922,000 in September, 1912. Hog receipts increased 311,000 and sheep 346,000, compared with the same period in 1912.

Thus far this year the five Western markets received 5,485,200 cattle, 12,451,000 hogs, and 8,825,800 sheep, compared with 5,507,600 cattle, 12,962,000 hogs and 8,791,000 sheep in the nine months, 1912.

LAW REQUIRES RENEWAL OF STALLION LICENSES.

To the American Breeder:—The old stallion law was repealed by the last session of the legislature and a new law was passed requiring all stallion licenses to be renewed each year. Application blanks are being mailed to stallion owners by the Live Stock Registry Board, and it is most urgently requested that these blanks be properly filled in, sworn to and sent back to the registry board at the earliest possible moment. As soon as these applications are received licenses will be issued for the year 1914.

Stallion owners should give this matter immediate attention so that there will be no delay in getting their licenses in plenty of time for next season's work.—State Live Stock Registry Board, Manhattan, Kas.

Nutritive Elements of Feeds

By J. O. Holmes.

Animal Food Specialist With Sulzberger & Sons Co.

The every day stock raiser who has not been blessed with an agricultural college training finds it difficult to fuly comprehend the meaning of the various terms used today by the majority of our agricultural writers, and in the state and federal circulars, bulletins and reports. In treating upon feeds and nutrition, the more important food constituents are covered by a few general classifications.

PROTEIN is the least common, the most expensive and the most necessary in the growth of animal life. Protein is used in every part of the body. It is the structure of the flesh, the mesh that holds together molecules of water and globules of oil to form meat. It is the tenacious substance that binds particles of phosphate into solid bone. It comprises the greater bulk of lean meat, skin, feather, beak, claw, hoof, hair and horn. The growing animal on a moisture free basis contains a high percentage of protein running from 30 to 40 per cent in the pig to 40 to 50 per cent in the calf. The white of an egg is the best example of protein in its own particular form, as it contains with the moisture eliminated 94 per cent pure protein.

Proteins present in animal bodies or organs are proteins of the highest order. They are nitrogen compounds that have been taken up by plants, converted into plant proteins, and then taken from the plants by animals and changed in the cycle of life into the animal body. Animal proteins are finished foods and enter direct into the circulation of the animal or fowl with very little changing in the digestive tract. Flesh proteins are highly nutritive; in fact, stimulative and energizing, keeping the animal or bird's blood circulation active.

When animal proteins are supplied to produce a balanced ration they sharpen the appetite, aid digestion, push growth, and stimulate the reproduction of the species, placing in the embryo, whether animal or fowl, strength and virulence not produced from plant sources. This is especially true in feeding animals of a semi-carnivorous trend like the hog or fowls that greedily devour insects or other forms of life supplying protein. To these animals the proteins of plant origin are not complete. They are not whole foods and do not give results produced by flesh proteins.

CARBOHYDRATES (Nitrogen Free Extract) consists principally of the sugars and starches of grains and forage. These compounds are energy producers. They are taken into the animal system, converted by the digestive juices, burned up in the production of energy, transformed into the fat globules or taken bodily by the protein engines and stored in the flesh. On a comparative cost basis this classification is the cheapest of the organic foods. Carbohydrates are essential in animal life for the proper functions, but for best results they must be properly balanced with the necessary amount of protein and mineral elements to grow muscle and frame.

ASH includes bone building phosphates and other mineral elements required in animal growth. This classification is too often overlooked by the stock raiser in his operations. The supplying of the animal with material to build its bones, tone up the circulation and replace the daily loss of mineral matter through perspiration and other bodily functions, the feeder usually trusts to luck, his water supply and the depraved appetite of his animals to chew old harness, bones and other mineral sources. Mineral matter should be supplied as regularly as other foods are given. Quantities of calcium and phosphorous compounds are used in the maintenance and growth of the animal. The feeder should not allow the growth of his pigs to be checked on account of the need of such cheap materials. The skeletons of animals or fowls on a moisture free basis contain 55 to 60 per cent mineral matter, principally calcium phosphate. The most natural supply of calcium phosphate is that form that has once been taken up by animals. This can be obtained in the form of animal bone, which material is placed on the market by the various beef and pork packing establishments, ground in different sizes for different purposes.

FATS are closely akin to carbohydrates, in that they are energy producers. They are a step nearer perfection and are more readily taken up by the system. The expense is comparatively small, and the value usually placed on them is near that of protein.

CRUDE FIBER is the framework of food stuffs, the woody fiber upon which the plant substance is built. A limited proportion is required as a carrier of other foods for best digestive results. It furnishes bulk and permits the best action of the digestive juices, on the interwoven protein and carbohydrates. Oat hulls, peanut hulls, corn cobs, etc., carry a high per cent of crude fiber, being practically indigestible.

The proportions in which different elements of food value should be fed depend upon the age and condition of animal and digestibility of the food. The feeder should see that all of the above elements are properly proportioned in his ration. When this is done the degree of digestibility is raised and the appetite increased. The animal will then eat more, digest it better and gain faster.

THE GREAT FUTURE OF THE WEST.

"We have an organization among certain of the representatives in Congress from the Middle West," said Geo. A. Neeley, a Kansas Congressman, "for offensive and defensive purposes. This organization now has twenty-eight members and one of the matters soon to engage its attention will be to devise some sort of an irrigating system commensurate to the needs of the country, and constructed upon such lines as will abundantly care for the interests of the arid and semi-arid sections. The question of drainage and irrigation are so closely interwoven that a union of the two forces is inevitable. And since we already own the equipment used in the construction of the Panama Canal; have the army of engineers fortified by their experience in that great undertaking, as well as government irrigation experts, it is incomprehensible that there should be a failure in the plan, and once we are able to begin this great work of carving an empire from these lands the national benefits will be so great as to carry it through to completion.

"We hear a great deal of conservation, but have you ever thought that we have hardly begun to harness our water power? Millions of horsepower of water power capable of heating and lighting homes of vast bodies of our citizens, of supplying power for a net work of electric freight and passenger systems, bringing the producer and consumer into closer relationship as well as supplying power for manufacturing and other industrial purposes are grossly wasted each year. The great rivers flow on to the sea, unburdened by inter state commerce, and we have done practically nothing in competition for the ocean going commerce of the world.

"The earth beneath is almost wholly undeveloped, offering opportunities rivaling those of Columbus on his voyage of discovery and we have just begun a systematic study of the world-old subject, the science of agriculture. Never before within the span of a human life have we known so much making for comfort, convenience and happiness of mankind as today, and yet, no people in all the tide of time ever lived in an age so golden with opportunities for the ambitious man or woman who knows how."

Wood Shingles? No! No!! No!!!

Stallions and Mare

for sale. Three Percheron stallions, two imported—one American bred. One Belgian stallion, one Belgian mare, imported, and one Belgian mare colt. **J. W. BOGGS, Argos, Ind.**

CLOSING OUT SALE.

Two imported Belgian stallions, 6 years old; bay; 2000 and 2100 pounds; one imported Percheron stallion, 11 years old; black. One home bred Percheron stallion 2 years old; black-grey. Also some registered fillies. These horses are all sound and priced to sell. **HATTEBERG BROS., R. 4, Paxton, Ill.**

STALLION TO TRADE FOR MARES.

I have a fine registered Standard bred stallion, Mazons Best 42229; bay; 9 years old; weight 1250; 16.1 hands standard measure, that I wish to sell or trade for grade draft mares. This horse is sound and a sure breeder; mares in foal and colts to show. Broke to all harness; straight trotter; trial 2:30. I am going out of the breeding business.

F. J. SIGEBARTT,
Argonia, Sumner County, Kas.

TWO STALLIONS

For sale. Inky black Percheron (not registered) stallion, 3 years; will mature at 1800; perfect top line; wide; deep; good length; plenty bone; good under knee; good head and eye; no bad habits; 60 per cent guarantee. Dirt cheap at $350. Also grade Percheron; dark brown; in flesh 1900; 7 years; good top line; very deep; heavy bone; no bad habits. Very popular; $550.

W. C. MOORE, Rte. 6, Parsons, Kas.

IMPORTED AND HOME BRED STALLIONS AND MARES.

PERCHERONS, BELGIANS, SHIRES.

The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. **Address Hart Bros., Osceola, Iowa.**

SHIRE STALLIONS FOR SALE.

One, 8 year old black; 1900 pounds; one, 4 year old chestnut, 1800 pounds; one bay yearling, 1300 pounds; one black foal, 700 pounds. These are all my own breeding from imported stock; all sound and priced to sell.

J. E. McWherter,
Plymouth, Hancock County, Ill.

STANDARD BRED STALLION

For sale. Lightning Electrite No. 42353, by Electrite No. 10878; dam Edita; foaled in 1904; is 15½ hands; weight about 1100 pounds; bay with white feet; star and snip; nice quiet driver for women. City broke and a good saddler; sound and a good disposition. Would trade for young mules or mares.

W. F. BURNS,
Maryneal, Nolan County, Texas.

STALLION AND JACK.

For sale cheap, one black grade Percheron stallion; six years old; weighs 1950 pounds. Also one four year old jack, 14 hands high. Both sound and all right. Colts to show from both. Reason for selling, have no help. For further information, address,

WM. H. STAHLHUT,
Alhambra, Madison County, Ill. Rte. 4.

ARABIAN STALLION FOR SALE.

Color bay and white; 6 years; 16 hands; weighs 1000 pounds. Excellent breeder; sure foal getter; two-thirds of his colts spotted. Perfectly gentle and broke in all harness. Price, $400. Reason for selling, am quitting the business. **E. J. MUNTER,**
Vandalia, Fayette County, Ill. Rte. 3.

FINISH FOR CROOKED WORK IN PERCHERONS

(Continued from page 3.)

the breeders who intend to make this a life-long occupation.

Every individual should familiarize himself with this situation and make it a point to be at every gathering of men in the country; at farm sales; in the smaller towns on Saturdays; at every fair; every agricultural gathering; in fact, at every place where men are liable to congregate he should be found talking and explaining these things. This is a matter of education. It is for the benefit of the general public. This is the time for every interested individual to help make an example of those who live and profit by crooked methods. The time has come when he must be talking. No honest man can be quiet in a campaign of this kind; he must stand up and be a man among men. When an individual is found who takes it upon himself to defend the promulgators of crooked pedigrees he should be branded then and there. If he favors crooked pedigrees of what value to the live stock industry can he be? If he is for clean pedigrees why does he favor the crooks? Ask yourself these questions—and then ask him.

There may be some who will contend that too much has been said and evade the real problem by this method. We contend that there would be more men interested in pure bred live stock if more of them had confidence in the general situation and could feel that deceptions would be given publicity as fast as they became known. We are asking now that such publicity be given wherever it is needed. We will take it as a favor from any reader of this, if he will send us the name and address of anyone he finds defending the crooked pedigrees. Literally thousands can be protected by the plan we propose, and no one is hurt but the very few who are doing wrong.

This subject might as well be settled now as at any other time. Would it not be wise for those interested to make some inquiry of different individuals as to how they stand on this subject? Be on the lookout for those fellows who are working underhand—the real smooth fellows. When 100,000 men make up their minds to eliminate the crooks it will not take the crooks long to discover that their business is quietly slipping away; they will discover sooner or later that honesty is the best policy even from their standpoint, and that it is time for them to make a change. We believe that when this subject is thoroughly understood and advertised from man to man, that a new epoch in live stock breeding will have been reached. It is not necessary to go into detail as to why you think any one is a crook; just tell the prospective purchaser, as a friend, not to go to a particular place. It does not take much talking to send a man to a reliable breeder, dealer or importer. There are hundreds of men in the business who are on the square, who are fighting for clean pedigrees and are willing to give value received. There are plenty of places where good, honest horses can be purchased and it is not necessary to patronize a crook. The draft horse industry is too valuable to be smirched and interfered with by a few unscrupulous men.

We have enough confidence in the honesty and integrity of the average American citizen to believe he will do his duty in this respect. When the crooks find that their business is slipping away, their one-time friends also will leave rapidly. A crook may have plenty of friends while his financial standing provides plenty of ready cash, but with the passing of the almighty dollar, the friends of the crooks vanish quickly. When those individuals who sympathize with the crooks find that they also are being watched just as closely by 100,000 men, they, too, will have occasion to clean up and will be very careful about making any outside statements. This is the time to get busy. The next few months will eliminate the crooks if every man does his duty.

A few years ago two men were looking at a bunch of colts, and among those colts was a very fine specimen. The owner remarked that it was a colt by the old grey horse, but unfortunately its dam was a grade mare and it would be sold as a grade. The owner had a large number of colts and a lot of registered mares. This colt might have been substituted for an inferior colt of the same age, sex and markings, and sold for more money. But the owner stated that

this colt must sell as a grade. Little was thought of this conversation at the time, but other experiences and a wider acquaintance with the owner of this stock has developed during the last few years a profound admiration on the part of the writer, for the many breeders who strictly and continuously practice honesty in their business.

In December, 1911, men interested in Percheron horses were being suggested for directors in the Percheron Society of America. It was remembrance of the case of this grade colt which caused the name of W. S. Corsa to be mentioned as a director, which office he now holds. There are now a number of good, substantial men on the Board of Directors of the Percheron Society of America, and we hope to see more added, and see this society grow and develop until every member will have implicit confidence in its management.

IS THE AMERICAN BREEDER APPRECIATED?

To the American Breeder:—Please send me a copy of your issue of September 5. I failed to get my paper of that issue, and do not want to miss a single copy. Have been a subscriber to your paper since its first issue and would not be without it.—Wm. F. Plessner, Franklin County, Mo.

ON GOVERNMENT HORSE BREEDING.

To the American Breeder: This will acknowledge receipt of marked copy of your July 5th issue. I heartily agree with you in the attitude that your paper takes regarding breeding horses for the government, or the government breeding their own horses.

I have since been talking with the Chief of the Bureau of Animal Husbandry, who informs me that the government does not expect to buy near all the colts that are sired by the government horses. This brings the proposition down to the fact that the government can only buy the poorest horses sired by their stallions in Virginia and Vermont.

These same stallions. if they were put out West, would sire good horses and the government would be able to buy practically all of them. I have been in the West and have used Western horses a great deal. The so-called broncho is a horse of the past, but from his stock has been developed one of the most hearty and useful animals of the country. The terms "broncho" and "pony" are only vague terms. In some localities any horse with a brand on him would be called a pony or broncho.

It looks to me rather inconsistent the way the government is going about with this horse breeding business. The government men have large pictures, also stereoptical slides of Western horses that they claim to be ideal mounts for the army. These pictures have been used in government publications. They will send their quartermasters out to look for horses that are good enough to win in horse shows and expect to buy them for $175. Then they will try to breed a $600 horse, knowing that if he is worth more than $175, the local buyer will get him.—Georgia Subscriber.

IT MAKES YOU FEEL GOOD

showing a stallion to your friends when you know you have the best around. Makes you money, too. Get just that stallion and at breeder's prices from my big bunch of registered Percherons, weanlings to 4-year-olds. Early if you can. **FRED CHANDLER,**
Route 7. Chariton, Iowa.

ADVERTISE THE HORSE.

"In the tent in which George Wilson's horses, entered in the show and sale at the Interstate fair at Spokane this week," says the Rural Spirit of Portland, Ore., "a banner has been hung up bearing in large letters these words:

" 'We are the cheapest power so far known to mankind. Each of us can lug 1,500 pounds ten hours a day and a ton when necessary; give you twelve hours' service, replace ourselves with others, fertilize your land and you profit by our offspring.'

"Every word of it is true and it is a wonder that both draft and driving horse men have not kept these facts more before the public during the past few years. Along with the advertisements, pages of matter are run in the daily papers—and even in some farm journals—proclaiming the cheapness and desirability of steam or gas propelled vehicles. Many of the statements are absolutely untrue and many more only half truths. Yet horsemen have allowed this unfair campaign to continue without an organized effort to make known the horse's claims to service; to establish in the public mind the easily proven fact that horse power is really cheaper than any other, besides the renewal of this power through off-

REGISTERED MORGAN HORSES.

My Morgans ars large; 15 to 16 hands and 1050 to 1300 pounds; have clean, heavy bone and possess all of the style and endurance for which the breed is noted.

For Sale—Weanlings to 3-year-olds, by The Admiral 4871 A. M. R., he by Jubilee De Jarnett. Send for catalog. **Richard Sellman, Rochelle, McCulloch County, Texas.**

KYGER JAY 51818.

Fine 4 year old black stallion; 15½ hands; absolutely sound; showed 2:20 gait with little work. Sired by Alstrath 2:24¼ (by Alcyone); dam by Jay Bird 5060; granddam by Hinder Wilkes; third dam by Margin (by Almont 33); fourth dam by Colonel Hambrich by Dictator 113. Will sell or trade for good team of young mules or young jacks not less than 15½ hands and weighing 1050 pounds or more. This is a high-class colt. Will not trade for common stock.
C. E. BROWN, MAINEVILLE, OHIO.

EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. **W. H. Fulcomer, Belleville, Republic County, Kansas.**

spring, while expensive machines go to the junk pile; and still further, and almost as important, the value of the horse in fertilizing the land."

MULE RAISING ON THE SANTA FE

Along the lines of the Santa Fe Railway the American Breeder has a great many readers, who, like Mr. A. Holmes, of Pampa, Texas, have made a success raising live stock in connection with such crops as experience has shown to be practical and successful. There is nothing about Mr. Holmes' experience which cannot be repeated on thousands of other farms. In fact, many others are doing much the same and equally well. It is the evident practicableness of Mr. Holmes' methods that make us glad to print his statement. The Santa Fe traverses an empire in extent in which men can do as well.

If you would like to learn of many other ways in which people are making good use of the opportunities thus opened, address C. L. Seagraves, General Colonization Agent, 2511 Railway Exchange Bldg., Chicago. But here is Mr. Holmes' letter about raising mules:

"I find that mule colts are one of the surest and most satisfactory producers of money on my farm. I grow several of these each year, and they are always in ready demand at $75 at weaning time. The mares from which these mules are raised are worked, with little loss of time, on the farm; thus the mule colt increase is practically clear gain or profit.

"But this is only one of the mediums through which I make farming pay. I harvested, during the season of 1912, 19 bushels of wheat per acre from 380 acres, which crop was sold at an average price of 82 cents per bushel.

Kafir corn and milo maize were also grown to the extent of 150 acres and proved a handsome yield, the threshed grain selling for a good price.

"Spare hogs, grown in a small way, were sold for $120 over and above what we used on the farm. Then there are the hens, proving a source of steady if not large income, all rounding out a profit which makes farming in the Panhandle attractive in a financial way, as well as pleasant.—Adv.

22 HEAD OF JACKS AND JENNETS.

For sale, from six months to 8 years old. They are all of the large kind and have good color and big bone. Also an extra good draft stallion, 7 years old, and trotting stallions. I must sell these horses on account of their fillies. Come and see them; they are priced to sell.

HENRY OBERMANN,
Friestatt, Lawrence County, Mo.

SIX GOOD BREEDING JACKS.

Also imported Percheron and Belgian stallions; some weigh 2160 pounds. Stock for sale or trade on long time payments; 1, 2 or 3 years at 6 per cent.

R. I. LITTLE,
Fairfax, Iowa. Route 2.

COLTS FOR SALE.

Nine mule colts; 11 yearling and two year draft geldings. Prices right.

F. A. JOHNSON, LEOTI, KANSAS.

Mules For a Stallion

Good young mules, yearlings, two and three year olds to exchange for a good black ton Percheron stallion from 4 to 7 years old. This stock is all right in every particular and I guarantee it.

W. F. DUSELL, Montevideo, Minn.

BREEDING STOCK AND LAND FOR SALE.

One registered Percheron stallion; color dark brown; 9 years old; weight 1900 pounds. Good heavy bone and a real draft horse. Registered in Percheron Society of America. Also one black Mammoth jack: 8 years old: mealy marked jack: 14 hands standard and good bone; active and works as quick as anybody's stallion. One of the few that works on the range. Both of these are good; sure breeders with plenty of colts to show.

Also my property consisting of three acres in good town of 400 population; good country surrounding it with good breeding business already established. Good house, barn and outbuildings; fenced and in good condition. Three good drilled wells with fruit and garden. Will sell together or separate, or trade for good young horses, mules or cattle, or land, as I am quitting the business.

C. E. HODGDEN,
Galesburg, Neosho County, Kansas.

Are Mongrel Jacks Worthless?

A Kansas subscriber states that he purchased a jack for a long price that has not proven satisfactory. The dam of this jack was out of a burro; its dam was by a good jack but a very large number of the mules sired by this jack are small; some of them, however, are extra good. When he buys another jack he is asking if registered jacks will improve this condition.

Just so long as the American jack breeders stay out of a reliable jack registry, just that long will this same condition exist. The object of a reliable association is to establish a record of the ancestry of breeding stock. The Standard Jack and Jennet Registry of America has done more in the way of laying a real foundation for a registry of this sort than any other jack record. As foundation stock the rules require in general a well proportioned type fulfilling three important measurements, any one of which if not met with will disqualify the animal. Jack buyers are going to insist on having jacks registered—many of them are now making this one of the qualifications. If every jack buyer will request this, the jack breeders will get busy and register their stock.

Animals having ancestors on both sides, recorded in a record that makes the above requirements, should breed better than those which are not thus registered. Those so registered will be known to have ancestors which came up to a certain standard of merit. The time is not far distant when every jack must be registered, to bring a fair market value. There are men living who remember when a registered horse was a curiosity. How many buy stallions in this day that are not registered? Breeders of jacks and jennets cannot afford to let this opportunity go by.

Jacks and jennets can now be registered as foundation stock without having to have registered ancestors. It is not necessary to trace any blood lines. These rules, however, will not remain open very long. The Standard Jack and Jennet Registry of America is growing so rapidly that a very large registration has already made space an object. There will be many who have waited too long and will be compelled to sell their stock at about half what registered stock of the same quality will bring. Every mail brings a large number of applications. Many of the biggest and best jack breeders in the country are patronizing it. They have felt the effect of buyers demanding registered stock. It adds value at selling time; it adds value in the public service. It is a start in the right direction which has long been needed. The American farmer has been taught that registered animals are superior to grades. There are communities in which a grade animal cannot get any business .

Who can afford to reject this proposition for the small amount of expense and time? What jack owner can afford not to register his jack and later let it be classed as a grade?

Good jennets also should be registered. This is the best time of year to do it. Their measurements will show up good and strong coming in from the pasture. When the next crop of colts are foaled they will represent registered stock having both sire and dam registered. A few short generations will make a wonderful change in mule production. The owner of every jennet should make inquiry as to whether the jack is registered or not before the jennet is bred. All of the foundation stock which will meet the requirements of the Standard Jack and Jennet Registry of America should be registered while the rules are yet open. Get a record volume and know yourself where the registered stock is owned.

For further information write to Wm. E. Morton, secretary, 920 Scarritt Bldg., Kansas City, Mo. The rules of entry are as follows:

1. Pedigree must give name, color, sex, year foaled in, and name and address of owner.

2. Jacks must measure 58 inches or more from the highest central part of the withers to the ground and measure 62 inches or more around the heart girth in average condition, and have 7 inches or more measurement around the front leg at the smallest place between the ankle and knee (leg to be normal size).

3. Jennets must measure 56 inches or more from the highest central part of the withers to the ground, and measure 60 inches or more around the heart girth in average condition, and have 6¾ inches or more measurement around the front leg at the smallest place between the ankle and knee (the leg to be normal size).

4. Any color admitted, provided they comply with Rules 2 and 3.

5. Young undeveloped jacks and jennets may be registered when their sire and dam are registered in this Registry, provided the sire fills the above measurements. This will make a uniform type.

6. Each application must give exact measurements of foundation stock, so the certificate cannot be handed out with another animal.

7. Each application must be sworn to before a Notary Public or Justice of the Peace.

8. You can give the sire and dam names (barn names) for foundation stock.

9. This Registry will not recognize any other Jack Registry unless the animal meets the requirements of this Registry.

10. The fee for registering Jacks and Jennets in the Standard Jack and Jennet Registry of America shall be **one dollar to stockholders and two dollars to non-stockholders for each animal registered. The fee for transfers shall be fifty cents to stockholders and one dollar to non-stockholders for each animal transferred. The fee in all cases to accompany the application. Each transfer shall be recorded before the offspring can be registered.**

NOTE—We are now registering jacks and jennets that fill certain requirements as foundation stock, and it is not necessary to have the sire and dam registered or their ancestry traced, provided the animal fills the requirements of this Registry as given in the Rules of Entry.

Each Stud Book will have a standard sire list, showing the exact measurements and colors of all sires. These Stud Books will be sold cheap so that everyone interested can own one and know the qualities of the sires. For the advancement of a breed it is necessary to use good sires.

JACKS FOR SALE.

Seven first class jacks; ages one to six. Bred right; raised right. Priced to sell. Colts to show. Mares in foal for those of proper age. Also some good jennets; ages one to seven.

L. W. Garriott, Austin, Scott Co., Ind.

BLACK JACK, MEALY POINTS.

For sale; 15 hands high with good bone and body; 7 years old. A good breeder and quick server. Am quitting the business, reason for selling. Price $400. **E. J. Munter, Vandalia, Fayette County, Ill. Rte. 3.**

JENNETS OR JACKS TO TRADE

for good registered draft stallion. Jack stock for sale at all times. Also have for sale 30 good mule colts, by a 15¾ hands jacks and 40 colts by a draft stallion.

Stanley Turner, Water Valley, Tex.

Make Money With Poultry

AMERICAN POULTRY is a magazine devoted entirely to helping earnest men and women make a finincial success of poultry raising. Its staff of writers is composed entirely of those who have made a practical, instead of theoretical, success of poultry farming, and who are glad to pass on the results of their hard earned experience to AMERICAN POULTRY readers.

There are many pit-falls in the path of the novice which may be entirely avoided by those who will follow the teachings set forth in this magazine. It fully explains how to make a start, how to construct houses, coops, and other devices, how to get a large egg yield, how to cure and prevent disease, how to exhibit, how to get the top price for eggs, how to use incubators and hundreds of other points which everyone wishes to know. It explains the famous secret system through which poultrymen have become rich and afterwards sold for hundreds of dollars.

AMERICAN POULTRY is a large, handsomely illustrated, monthly journal, well printed on fine paper, and should be found on file in the home of every poultry lover. No beginner in the poultry business should think of being without it. It will save him many times the small subscription price. The advanced poultryman will also find it of great value; the articles being varied in their scope.

SPECIAL OFFER. The regular price of AMERICAN POULTRY is 50c per year, but in order to introduce it to several thousand new readers, we will, for a short time, give a 200-page poultry book, which is a complete guide in the poultry business, ABSOLUTELY free to everyone sending 50c for a yearly subscription, or $1.00 for a three year subscription to AMERICAN POULTRY. A trial six months' subscription (without book) will be sent for 25c. Never has so much been offered for so small a sum. Advantage of this offer should be taken at once.

THE SERUM SITUATION IN MINNESOTA.

To the American Breeder:—Hog cholera is usually most prevalent during late August, September, and October, but this year it has appeared a month earlier than usual and in sections of the state heretofore regarded as uninfected.

It seems hard that we should know the best methods of preventing this disease and yet be unable to put this knowledge to good use, but the legislature at its last session appropriated $10,000 a year for the next two years with which to supply Minnesota farmers with serum, but specified a price which is only about one-fourth of its actual cost. This means a heavy loss on all serum sent out, and practically limits the output of the plant as it must stop the distribution for any given year when it has lost $10,000. When serum was sold at cost the plant was self-supporting and there was no limit to the amount of serum distributed except the capacity of the plant. Now that we must sell at a loss we must stop as soon as we lose a certain amount each year.

We have orders now on file for as much serum as we can produce during the next six months, and in making our shipments are giving the preference to sick herds. We advise local veterinarians to procure serum from commercial serum plants, but they are also unable to fill their orders.—H. Preston Hoskins, Assistant Veterinarian, University Farm, Minn.

MISSOURI STATE POULTRY SHOW TO KANSAS CITY.

The fact that the building in which it had been arranged to hold the Missouri State Poultry Show at Chillicothe, will not be completed in time, has rendered it necessary to change the location of the show. Every friend of the Missouri State Poultry Show will be glad to learn that satisfactory arrangements have been made for holding the twenty-second annual exhibition at Convention Hall in connection with the Kansas City Poultry Show, they having very kindly changed their dates to coincide with those of the Missouri State, namely December 11-16, 1913. This arrangement practically insures one of the largest and best shows ever staged in Convention Hall, and that is saying a whole lot, for it will be recalled that the last time the Missouri State Poultry Show was held in Kansas City, over five thousand birds were on exhibition. The prizes are the most liberal ever offered at any Missouri State Poultry Show. In addition there are hundreds of dollars in cash specials, together with medals, cups and trophies too numerous to mention.

NEW BERKSHIRE RECORD VOLUME.

Volume No. 42 of the American Berkshire Record has just been issued. The 5,000 animals recorded in this volume are numbered from 170,001 to 175,000 inclusive. For copies of this record volume address Frank S. Springer, Sec'y American Berkshire Association, Springfield, Ill.

A YEAR'S TICK CLEARANCE—30,000 SQUARE MILES.

Early in August the Acting Secretary of Agriculture issued an order effective on and after September 1, 1913, releasing from cattle quarantine for Texas fever 9,191 square miles in the states of Texas, Oklahoma, Tennessee, Georgia and South Carolina. This means that the sections released have succeeded in eradicating the cattle tick which is the cause of spreading splenetic or Texas fever in cattle.

The actual portions of the several states released from quarantine on September 1st as a result of the order of the Secretary are as follows:

In Texas—The counties of Fisher and Jones, the remainder of Terrell and Hardeman counties, and portions of the counties of Crockett, Sterling, Mitchell, Haskell and Knox.

In Oklahoma—The county of Nowata and portions of the counties of Washington, Osage and McClain.

In Tennessee—The counties of Henderson, Chester and Hardin, and the remainder of Decatur, Wayne, McNairy and Hardeman counties.

In Georgia—The counties of Newton and Oconee.

In South Carolina—The remainder of the counties of Abbeville and Chester.

This release from quarantine is in addition to the 20,000 square miles released on March 1, 1913, so that this year the quarantine has been lifted in nearly 30,000 square miles of cattle raising territory.

Since the beginning of the work of tick eradication in 1906, 196,395 square miles, out of the 741.551 square miles infected, have been cleaned up and released from quarantine. All of Tennessee, except a small portion of Marion County, is now released as a result of the active anti-tick campaign in that state, whereas in 1906 a large portion of that state was in the quaranine district.

WINTER LEGUME COVER CROPS FOR THE SOUTH.

This is the season when southern farmers should plant a winter legume in their corn and coton fields. That such crops have high value is established beyond all question. They furnish a cover that prevents much leaching and erosion; they add nitrogen to the soil directly; and when plowed under in the spring, they supply humus upon which a continuous supply of nitrogen depends. For this purpose, the southern farmer has a choice of three good crops; namely, crimson clover, bur clover, and vetch. Crimson clover has done wonders in building up the soils of the coastal states from New Jersey to South Carolina, and its use is increasing greatly each year. Outside of this region it has been neglected, though in all of the Southern states the crop succeeds well when a stand is secured. The principal difficulty in obtaining a stand in the cotton belt is when dry weather prevails at planting time; namely, from August 15 to as late as October 15. Fifteen pounds of seed per acre between the rows of cotton or corn will, under favorable conditions, give a stand. Farmers' Bulletin 550 discusses in detail the growing of crimson clover.

Bur clover is nearly equal to crimson clover in the South so far as growth is concerned and superior in the case of obtaining a stand. If strips of bur clover are permitted to mature seed, it will volunteer year after year when once well established. An excellent discussion of the crop is given in Alabama Bulletin No. 165.

I offer a few cars of **Cotton Seed Feed Meal for October and November shipment at $26.90 a ton,** delivered your station in car lots.

Oliver Wyatt, Salesman for Southern Mills, Clinton, Mo.

GOOD SHORTHORNS.

Practical cattle for both beef and milk. Just the kind the farms of the country need, and with breeding and conformation to make show cattle if you want them. I show my breeding stock successfully, but no stock is ever crowded enough to hurt it.

Pleased to show stock, quote prices and answer inquiries at all times.

C. H. White, Burlington, Kas.

Hairy vetch is another splendid winter cover crop. It will outyield either crimson clover or bur clover, but the seed per acre costs more. Dry fall weather interferes but little in obtaining a stand of vetch, as the seed will survive in the ground for a considerable time.

This crop is fully discussed in Farmers' Bulletin 515 and Bureau of Plant Industry Circular 102, Department of Agriculture, Washington, D. C.

A COLLEGE'S LIVE STOCK WINNING AT HOME.

Eighteen prizes at the Kansas fairs—nine at Topeka and nine at the State Fair at Hutchinson—were the awards made to eight head of cattle exhibited by the animal husbandry department of the Kansas Agricultural College this season. Two championships, seven firsts, five seconds, two thirds, and two fourth prizes with cash awards of more than $300 were the extraordinary winnings of these eight animals.

At both fairs, Beau Talent, a pure bred Hereford, was pronounced champion steer and won first place in the yearling exhibits; Greenwood, a pure bred Hereford, and Maple Boy, a grade, first and second prizes in the exhibits of two-year-old steers; Baldoon, a pure bred Angus, second in the aged bull exhibit; College Boy, a pure bred Shorthorn, first in the exhibit of calves. First and second prizes on the best group of three steers also went to the college herd. Baldy Stewart, a pure bred Angus, won third at Topeka and fourth at Hutchinson; College Beau, a pure bred Hereford, third at Hutchinson; and Fancy Beau, a pure bred Hereford yearling, fourth place. The college will show these eight prize winners and twelve others at the American Royal Stock Show in Kansas City, October 6 to 11.

TO AVOID DANGEROUS RAILROAD CROSSINGS.

Hundreds of the dangerous railroad crossings in Kansas might be eliminated by making slight changes in the present location of the public roads, says W. S. Gearhart, state highway engineer at the Kansas Agricultural College. This would not only do away with these crossings, but in most cases it would improve the road, the state engineer says. Crossings which cannot be abolished in this way can be made much more safe than they are now if the local officers will remove all obstructions near the crossings, such as hedges, brush and banks of earth, and if the railroads will put in electric bells.

QUESTIONS AND ANSWERS

QUOTATIONS ON HORSES—I would like to know whether the quotations on horses and mules in this paper have reference to them as broke to work, at the halter, or never been handled at all.—Colorado Subscriber.

REPLY—All quotations apply to broken horses except where range horses are mentioned; some of these are also broken. Horses at the leading auctions are sold subject to trial. If they do not work satisfactorily when announced as being dependable workers they are rejected.

REGISTERING PERCHERONS — Is there more than one register for pure bred Percherons that can be relied upon?—New York Subscriber.

REPLY—The Percheron Society of America at Chicago and the American Breeders and Importers Percheron Registry at Plainfield, Ohio, were both recognized by the Bureau of Animal Industry until recognition was withdrawn from all American associations January 1, 1911. While the Plainfield book is usually recognized, yet it might be profitable to have all animals registered in the Percheron Society of America.

SORREL PERCHERONS—I have a registered black Percheron stallion and he gets some sorrel colts. I want to know if it is right for this kind of a horse to get sorrel colts.—Oklahoma Subscriber.

REPLY—Horses in the Percheron district of France have had three prominent changes in color. In 1830 many horses in this district were said to be sorrels. About half a century back grey horses were very prominent and during the last quarter of a century many black horses have put in their appearance. All colors can be found in that district. Many good stallions produce sorrel colts when crossed on mongrel mares.

CLEVELAND BAY HORSES—Will you kindly give a history of the Cleveland bay horse? Was he originally imported or is he purely a product of the United States?—Wyoming Subscriber.

REPLY—This breed of horses is probably next to the oldest known breed of horses. The Thoroughbred has had a registry longer and is perhaps the oldest breed. Some of the authorities state that the Cleveland Bays were a recognized type first. They were originated in England. There are not many of them now; a few fine specimens can be found in that country. They breed very true to type and color.

QUESTION AS TO BREEDING—I enclose a bill of a horse that is billed as imported and pure bred. Kindly look him up and answer these questions.—New York Subscriber.

REPLY—You failed to enclose bill for this horse. Send full particulars to the Bureau of Animal Industry at Washington, D. C., if he was supposed to have been imported since January, 1911. If imported prior to that time, write to the secretary of the association recording such horses. You will find a complete list of the registry associations in a former issue of this paper.

FIELD NOTES

PUBLIC SALE DATES.

Upon request we will announce, under this head, free of charge, the date and location and the name of proprietor or manager, for all public sales of pure-bred live stock which are to be advertised in the columns of the American Breeder.

Percherons.

December 9.—W. S. Corsa, White Hall, Ill.
December 11.—Ben Bohlander & Son, El Paso Ill.
December 15.—Chas. C. Irvine, Ankeny, Ia.

Belgians.

December 15.—Chas. Irvine, Ankeny, Ia.

Shire Mares.

December 11.—Truman's Pioneer Stud Farm, Bushnell, Ill.

What is the first good square proposition for buying a range or stove by mail which you ever heard? "Kalamazoo Direct to You," of course. It is the original, and long has been the standard. It is the one we advertise. We ask that every one who has a range, stove or furnace to buy, answer this advertisement and get full particulars. Write today, and mention the American Breeder—a good practice always.

Do you know Absorbine? Have you written W. F. Young, 388 Temple St., Springfield, Mass., for his "Book 2K" on this famous remedy? Do it.

The papers say that 140,000 Americans have gone to Canada in the past year. Great farming opportunities and laws favoring farmers are causing this great movement. If you want to know more about it address K. T. Thornton, Colonization Agent, Canadian Pacific Ry., 112 West Adams St., Chicago.

M., K. & T. is the road to Texas.

This is roofing time. Edwards Mfg. Co., 1026-1076 Lock St., Cincinnati, O., make the roofing material. Write them about their steel shingles, as above.

The American Breeder has just made arrangements with the Youth's Companion whereby any one clipping out the coupon contained in the advertisement in this issue, and sending $2.00 to the Youth's Companion, Boston, Mass., can have the greatest family paper in the world coming to their home until January 1, 1915. In this issue is their advertisement making also a clubbing rate of $2.50 for the Youth's Companion and the American Breeder.

In starting his advertisement of Chester Whites, B. M. Boyer, of B. M. Boyer & Sons, Farmington, Iowa, writes: "We have as good or better boars to offer this year than ever before. They have been bred for bone and size, with quality, having the range of the farm with free access to tankage, and just enough corn to give them quality. They are in the best breeding condition, but not fat. They were farrowed in March, April and May, and will weigh from 125 to 240 pounds. We will be pleased to have anyone wishing a good boar to write us, describing just what they want, and if we fail to fill their description, all we ask is that they return the boar to us at our expense. We believe this is a fair proposition. We will send catalogue giving full description of our herd on request."

J. E. Park, the well known breeder of jacks and Percherons, of Cameron, Mo., starts his ad in this issue. He has a good bunch of either jacks or stallions to select from, and any one in the market for stock of this kind should not fail to write Mr. Park for prices and description.

Jos. F. Petr, Cuba, Kansas, has an extra good jack advertised for sale in this issue. Read the ad.

Any one having hogs or cattle to trade for a jack and a stallion, should read the ad in this issue of Ben T. Prigmore, Sweet Springs, Mo., and then write for full information.

C. L. West of Shannon, Miss., is in the market for grade draft mares, Percherons preferred. Any one having such stock for sale should correspond with Mr. West.

W. C. Moore Parsons, Kans., is advertising two stallion bargains in this issue. Look up the ad.

Any one in the market for mule colts, yearlings or two year old draft geldings should not fail to read the advertisement in this issue of F. A. Johnson, Leoti, Kansas.

George Eggert, Prop. of the Oak Lawn Stock Farm of Newton, Iowa, starts an ad in this issue. They are importers and breeders of draft stallions and mares, and ask that any one in the market for stock of this kind to come and see them before buying.

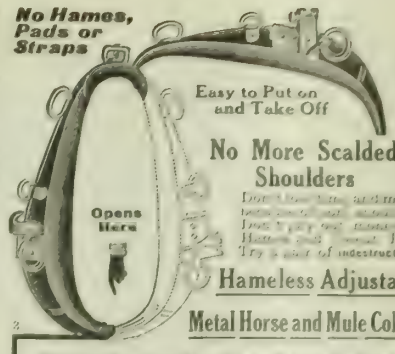
Hatteberg Bros. of Paxton, Ill., are closing out their stock and are pricing them for quick sale. Read their ad in this issue.

A registered stallion and jack are offered for sale in this issue by T. W. Becks of Eagleville, Mo. He is quitting the business and will sell them both for $500.

Read the ad in this issue of J. W. Boggs of Argus, Ind. He has three Percheron stallions, one Belgian stallion, one Belgian mare and a mare colt for sale.

C. E. Hodgden of Galesburg, Kas., is offering his breeding stock for sale, also his property consisting of three acres of ground with a good house, barn, outbuildings, etc. Read the advertisement. Mr. Hodgden is quitting the business.

Any one having a black ton stallion to trade for good young mules should not fail to read the advertisement in this issue of W. F. Dusell, Montevideo, Minn.



The Ford Stock Farm of Parker, South Dakota, reports the arrival of 40 head of Percheron and Belgian stallions on the steamship, Etonian, and states that it is the firm's best importation, both in breeding and conformation. The Ford Stock Farm was formerly Ford & Harrington and is now incorporated for $50,000, with G. A. Ford as manager.

J. E. Afdem of Hettinger, N. Dak., has a car load of three year old mules advertised for sale in this issue. Look up the ad.

Any one in the market for a 1,000 pound jack should not fail to read the ad in this issue of J. Fred Skank of Henderson, Iowa. He will sell for cash or trade for Percheron fillies or other stock.

W. H. Bayless of the Blue Valley Stock Farm, arrived at Blue Mound, Kas., September 8, with 18 of the best Belgian stallions and mares he has ever brought over, all selected by him in Belgium during the past summer.

J. G. Truman of Trumans' Pioneer Stud Farm, writes: "Our horses arriver from Indiana State Fair in very good condition and we had our usual success at that fair, winning both champion on Shire stallions and mares together with every first prize but one that we showed for. We are making our usual exhibit of 40 imported Shire, Percheron and Belgian horses at the Illinois State Fair and are located in our old quarters. I am pleased to say that our horses are all doing well. Our importation that arrived three weeks since are in first class condition and are ready for sale.

No More Scalded Shoulders

Don't lose time and money because your mules are sore. Don't pay out money for Hames and Pads. Try a pair of indestructible

Hameless Adjustable Metal Horse and Mule Collars

Endorsed by veterinaries and users of [illegible] as the best. A. F. DeLaune, of [illegible], La., writes: "Could not [illegible]."

Think what that means to [illegible] owner. Think of the time saved, [illegible] suffering saved the mules. Think of the extra work you could do with a collar that [illegible] and sore shoulders. Be [illegible] and up-to-date and save money by using

Indestructible Collars

and you'll be free from sore shoulder troubles. The metal won't permit the [illegible]. Being adjustable they fit the [illegible] to correct point. Durable—last a lifetime. The ideal work horse and mule collar. Be [illegible] get the great Twentieth Century [illegible] successful men. Good Agents Wanted. Mail [illegible]

Jack Sores Cured

By Using Jack Sorine. Sold With a Cash Guarantee.

O. P. WILSON SERUM CO., Kansas City, Mo.

Enclosed find my check for $5 for a package of your "Jacksorine" for jack sores. This is for a neighbor and shows on its face that your salve is doing my old jack's leg some good.
June 5, 1913. W. H. HAYS, Bloomfield, Ky.

We guarantee Jack Sorine to cure any sore on the legs of a jack or stallion, no matter how long it has been sore or what caused it. You know we have a good, reliable remedy or we could not guarantee it to cure all sores on the legs of stallions and jacks, without any restrictions. It is put up in a substantial box and sent promptly by mail. It is a paste and applied with a small brush.

Send money by bank draft or P. O. money order. Price $5.00.

O. P. Wilson & Co., 3754 Wayne Avenue, Kansas City, Mo.

THE RIGHT WAY

IN ALL CASES OF DISTEMPER, PINKEYE, INFLUENZA, COLDS, ETC., of all Horses, Jacks, Mules, Brood Mares, Colts, Stallions, is to

SPOHN THEM

On their tongues or in the feed put Spohn's Liquid Compound. Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the disease germs. It wards off the trouble no matter how they are "exposed." Absolutely free from anything injurious. A child can safely take it

50 cents and $1.00; $5.00 and $10.00 the dozen. Sold by druggists, harness dealers, or sent, express paid, by the manufacturers.

Special Agents Wanted.
SPOHN MEDICAL CO.,
Chemists and Bacterologists,
Box 834. Goshen, Ind., U. S. A.

Mixing Concrete on the Farm

On account of its cheapness, uniformity and quick development of strength, the only cement practically used at present is the kind called "Portland." There are almost as many brands of Portland cement as there are of wheat flour. For farm work choose some brand guaranteed by the local dealer to meet the standard specifications of the American Society for Testing Materials, which standards are approved by the national government.

Cement takes water so easily that care must be exercised in storing it. Upon the regular floor of a good building place timbers close together, as a support for a false floor, upon which the cement should be piled.

Cement is heavy; do not overload the floor of the building by piling it too high, and do not store it against the side walls. Keep it covered with canvas or roofing paper. Cement once wet sets up and is unfit for use. However, lumps due to pressure in the store house must not be mistaken for set-up cement. Such lumps are easily crumbled and may then be used.

Do Not Buy Stone Screened to One Size.

Concrete is a mixture of Portland cement and particles of stone. The stone should vary in size from pieces one inch in diameter to sand grains. By so grading the stone, the smaller particles fit in the spaces between the larger pieces, thereby producing the most compact and the strongest mixture.

The best stone for crushed rock is one which is clean, hard and breaks with sharp angles. Trap, granite and hard limestone are among the best; the use of shale, slate and soft limestones and sandstones should be avoided. The crushed rock should be screened on a quarter-inch screen to remove the fine particles. These small particles should be considered as sand; and, if insufficient in quantity to make the proper proportion of the concrete, as is described later, enough sand should be added to them to produce the required amount.

Gravel well graded in sizes is at least equally as good for concrete as crushed stone. Bank-run gravel, just as dug from the pit, seldom runs even and rarely has the right proportion of sand and pebbles for making the best concrete. The mixture most suitable has one part sand to two parts gravel, measured by volume, in which all sizes passing through a one-inch mesh screen and retained on a quarter-inch screen are considered gravel. As there is usually too much sand for the gravel, it is both advisable and profitable to screen the material and to remix them in the proper proportions. Gravel should have no rotten stone and should be clean, so that the cement may adhere to it tightly.

Sand Must Be Clean.

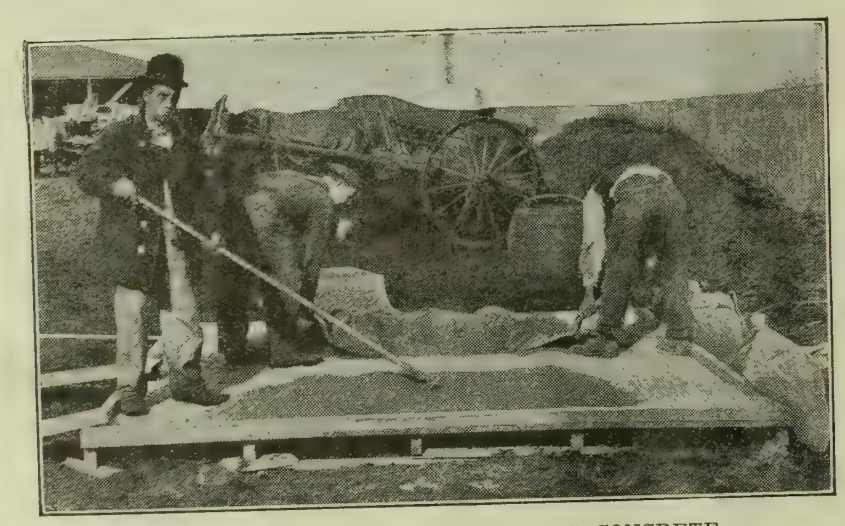
With dirty sand, no amount of cement will make strong concrete. Generally sand is clean, but if not, it can easily be washed by playing a hose or flushing water upon thin layers of sand placed on a tight-jointed inclined wooden board. In size of grain it should vary uniformly from fine to coarse. All particles passing a quarter-inch screen may be considered sand.

Any good-tasting drinking water is suitable for concrete.

The tools and equipment necessary for making concrete in moderate quantities are already at hand on a well conducted farm, or will be useful afterward for other purposes.

The list:

2 square pointed "paddy" shovels, No. 3.



1 round pointed tiling shovel or 1 garden spade.

1 heavy garden rake.

1 sprinkling can or bucket or 1 spray nozzle for hose.

1 water barrel or 1 length of hose.

1 sidewalk tamper or home-made wooden tamper.

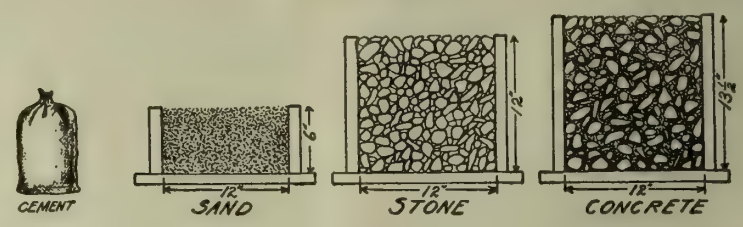
SHOWING THE METHOD OF MIXING CONCRETE.

1 sand screen made of a section of quarter-inch wire mesh nailed to a wooden frame.

1 measuring box or frame. See description further along in article.

1 mixing board.

2 wheelbarrows with steel trays.



For farm work the following proportions are most suitable:

For concrete necessarily waterproof. . .1:2:4 or 1:4

For all other ordinary purposes.....1:2½:5 or 1:5

Such proportions of three parts, as 1:2:4, indicate that the concrete is to be mixed 1 part cement to 2 parts sand to 4 parts screened gravel or crushed rock; and 1:4 that it is to be mixed 1 part cement to 4 parts bank-run gravel.

Measurement by counting shovelfuls is poor and uncertain practice. To avoid splitting of bags of cement, make as the unit of measurement 1 cubic foot, the amount of loose cement contained in one cement bag. Such measurements are made a very easy matter by gauging the wheelbarrows. For this purpose use a bottomless box holding one cubic foot. A shallow bottomless frame is also a convenient means of measuring. Such a frame, when set on the mixing board and filled, should contain the full amount of sand or one-half the quantity of gravel, or crushed rock, required for one batch of concrete.

SHOWING PROPORTION OF MATERIALS AND THE RESULTING CONCRETE.

Using a "Two-Men Board."

The size of the batch is dependent upon the amount of help and the dimensions of the mixing board or platform. For work of ordinary size, sufficient room will be had on a "two-men board," 8 by 14 feet, framed solidly and covered with one-inch stuff with tight joints the short way of the board. A wooden strip nailed around the outer edges will prevent the loss of liquid cement. For such a board and the proportions designated above, make the bottomless frame of the clear dimensions given in the table below.

TABLE 1—FOR TWO-BAG BATCH.

Proportions:	Sacks of Cement	Framefuls of Sand	Framefuls of Crushed Rock or Screened Gravel	Clear Dimensions of Frame
1:2 :4 or 1:4	2	1*	2	0'6"x2'8"x3'0"
1:2½:5 or 1:5*	2	1*	2	0'6"x2'6"x4'0"

*For bank-run gravel use the same tablesable, but no sand is required except that which is already in the gravel.

All the materials (slightly more than the computed quantities) should be on hand before beginning the work. They can often be hauled at odd times. The sand and gravel or stone should be piled so as:—

To cause the least amount of wheeling.

To make the mixing most convenient to the water supply.

To allow room for the future location of the mixing board.

If the gravel does not need screening, place a bottomless frame, previously described for a 1:4 mix, on the mixing board and fill it level full with gravel. Lift the frame, spread the gravel slightly with the garden rake, and upon it distribute evenly 2 bags (the full amount) of cement. Set the frame upon the leveled surface of cement and gravel and again fill it in the same way.

Mix Carefully With a Rake.

Remove the frame and spread the entire mass by dragging it back and forth with the rake. Two men, opposite each other, then turn the batch with the square pointed shovels. Again use the rake. Keep turning until the cement no longer shows in streaks, until the mixture has a uniform color. Throw up the ragged edges and, with sprinkling can or hose with spray nozzle, apply water in quantity, according to special directions given later for each particular kind of construction. Turn again and add so much more water as may be required. If dry streaks are still evident, continue the turning until they disappear. With wheelbarrows quickly remove the concrete and immediately use it in the work.

If crushed rock or screened gravel is to be used, fill the bottomless frame with sand and distribute upon it 2 bags of cement. Drag the materials back and forth with the garden rake, then turn, as described above, until the mass has a uniform color. Spread the mxture so that 2 framefuls of crushed rock or screened gravel may be placed upon it. Wet the mass and turn as for bank-run gravel until each stone is coated with cement mortar. Remove as for the gravel concrete.

For the proportion of 1:2½:5 or 1:5 the method of mixing is the same.

Since crushed stone is more or less porous, in dry hot weather it is advisable to keep the stone pile wet or at least to water the stone well as it stands on wheelbarrows ready for the mixing board.

No vast amount of knowledge and experience is necessary to do first-class work in concrete. Success is dependent upon the care and thoroughness exercised in the selection of the materials, mixing of these ingredients, and protection of the freshly placed concrete.

MIXING BOARD, TOOLS AND PART OF MATERIAL FOR CONCRETE WORK.

HORSE AND CATTLE BREEDING SCHOOL

November 10 to 22

The cattle breeding school, beginning November 10, and ending November 15, may be the only cattle breeding school for a year. This depends on the attendance at the next term. Those expecting to attend the cattle and hog sessions should be on hand at the next term. The instruction in cattle breeding will be valuable for all breeders. No man owning a few good cows, or expecting to engage in the business can spend a week and a little cash to a better advantage. The fine prospects for cattle breeders should encourage every one to prepare to reap the greatest benefit with the least expense. The average cattle breeder knows very little about the subjects to be taught; they have been sadly neglected.

The best instructors on horse, cattle and hog breeding are employed at this school. Everything necessary for a breeder to know in his business will be thoroughly taught, and in plain language that the average breeder can understand. Every breeder will be expected to take part in the practical work on living and dead animals, such as dissecting and diagnosing conditions. No books necessary. Everything furnished.

What do You Think of the Statements Below from Men Who Have Attended? These Letters Are New.

Oct. 4, 1913. I think the Scientific Breeding School is just the thing—a man can learn a great deal by attending it. If I did not live so far, and I could spare the time, I would like very much to attend every term.—Emil J. Sorenz, Jamestown, No. Dak.

Oct. 4, 1913. I have attended one term of the Graham Scientific Breeding School and was very much impressed with the way this School was carried on last February. Parents don't be afraid to send your sons; they will be taken care of; no swearing or vulgar language is allowed. I surely got more than the price paid for my tuition. I can't stay away; Frank can expect to get another hearty handshake next term with his friend, Adam J. Esser, Blackwater, Mo.

Oct. 1, 1913. I think that the School as a whole is all right and that you are on the right track, and hope that you will have more than ever to give to the world in the way of knowledge.—Henry A. Nelson, Miami, Texas.

Oct. 3, 1913. I think the Graham Scientific Breeding School is all right. I have attended one term and have received great benefits. I have had but very few return mares. I am anxious to attend the November term. Would advise any farmer raising stock to attend.—W. E. Ross, Webster, Kansas.

Oct. 4, 1913. I attended the Graham Scientific Breeding School last February and I cannot speak too highly of it for I found it much better than I had expected. I would advise all who have stock to attend one term by all means, as I feel that I have been greatly benefited. I have used the capsule system of breeding with good results.—I. R. Culpepper, New Florence, Mo.

Oct. 1, 1913. I think the School is worth any one's time and expenses and if there were no instructions it would be worth the cost and time to meet the many men from all parts of the United States. The one lecture on "Bacteria" was great to me, and now the adding of the extra work on cattle and hogs, is another great step in advance. This School has long been needed and is filling a place that ought to have been filled 50 years ago.—Chas. Bull, Lenora, Kas.

Oct. 8, 1913. I attended the last February term and will say that money could not buy what I learned at the School as long as I stay in the breeding business. I also think I came home a better man by being associated with such a fine lot of men. In fact, the School is indispensable if a man is in the breeding business or stock raising.—C. W. Woodmansee, Parsons, Kansas.

Oct. 8, 1913. I would like to say, in regard to the Graham Scientific Breeding School, that I think it is an A No. 1 School for any one interested in the raising of live stock. Would not take many times what it cost me for what I learned there in one term. I intend to go back again soon.—E. W. Breckenridge, Olathe, Kans.

Oct. 4, 1913. I consider the Graham Scientific Breeding School an absolute necessity to one in the horse breeding business. In this age the "hit and miss" plan is behind the times, whatever the business. "Scientific Management" is the slogan of the present, manufacturing, farming, etc., and applies in its greatest meaning to breeding. The Graham Scientific Breeding School teaches its pupils the science of breeding. —C. E. McMullin, Montrose, Colo.

Oct. 7, 1913. I was well pleased with the Graham Scientific Breeding School, and I think no breeder can do better than to attend at least one term each year.—G. S. Shaklee, Corbin, Kansas.

Oct. 6, 1913. I was more than pleased with the instructions I received at the Scientific Breeding School, and think any one in the stock raising business would get more than value received if they would attend one or more terms. —J. A. Akin, Rantoul, Kansas.

Oct. 8, 1913. I think the Graham Scientific Breeding School a thorough success. The student attending is assured of benefit.—C. N. Bassett, El Paso, Texas.

Oct. 11, 1913. I think the breeding School is all right in every respect. I want to get some more of it as soon as convenient. It is money well spent to any breeder or farmer.—L. E. Van Arsdale, Blandinsville, Ill.

Oct. 5, 1913. The Graham Scientific Breeding School is a winner from start to finish, and the fellow that is staying at home thinking that it's a fraud, will wake up some of these times and wonder what is wrong after it is too late. I would say to every stallion owner to attend one term and be convinced. If you can't go, send your boys; if you have no boys, send a hired man. I'll bet either one will be able to tell you something when they get home.—Harry Evans, Alva, Okla.

Sept. 30, 1913. The Scientific Breeding School is the kind of school we farmers need. I am well pleased with the School.—John R. Cranshaw, Carbondale, Ill.

Oct. 2, 1913. The Scientific Breeding School is a fine School, not only for stallion and jack owners, but for any one who is engaged in stock raising. I think it is worth any one's time and money. I attended in February and going to try to be there this November.—H. L. Gracey, Overbrook, Kansas.

Oct. 6, 1913. Does it pay to attend your School? Since attending your School last February, I have found six diseased mares, three of them were so rotten they smelled badly; the stuff in their womb was so thick and corrupt as matter out of a carbuncle. These mares had been bred for several years without results, scattering this infection wherever they were bred. I cleaned them all up and bred them late in the season. They are all settled and have been for some time. This one thing probably saved me $500. Does it pay in dollars and cents to attend your School? But the best part of your School is the moral side. No one need hesitate to send their boys to this School, as it will repay any one. The lesson taught from the * * * episode last February stands out in a class by itself. It showed what the moral side of the school is. Mr. * * * was humiliated, but here is hoping that the lesson will reform him and also go deep down in the memory of all present. Does it pay to attend the Graham Breeding School? Decidedly.—Frank I. George, Esbon, Kansas.

The tuition fee is $25 for one or both courses. This entitles the student to return at as many terms as he cares to without further cost. The school is guaranteed to be perfectly satisfactory to the student or his tuition fee will be refunded; he alone is to be the judge. At both courses the work will begin every morning at 7:30 and last until 10:30 at night.

Feeding Ensilage to Horses

Conditions Peculiar to This Year Which Make the Question a Live One. Causes of Unsatisfactory Results and How to Avoid Them. One Successful Trial.

Written for the American Breeder,
By Prof. W. A. Cochel, Kansas Agricultural College.

Editor's Note:—As Prof. Cochel points ut, ensilage is not likely to come into eneral use for horse feeding under ormal conditions. Ordinarily most lo- alities raise an abundance of other eeds from which satisfactory horse ra- ions can be prepared. The present ear, however, is an exception, and ecause of the unusual amounts and haracter of the silage which has been tored this fall in Texas, Oklahoma, Kansas and parts of Nebraska and Mis- ouri, there is demand for information n this point. Prof. Cochel is one of he few men who have investigated ilage as a horse feed, and for that rea- on we called on him for the counsel nd cautions contained in the follow- ng article:

Because of failure of the grain in nany sections west of the Missouri nd the deficiency in the supply of oughage, many farmers will change heir methods of feeding this winter to lt the unusual conditions. There ave been more silos built in Kansas nd adjoining states this year than n all previous years combined. This s especially true of that territory usu- lly known as the "Short Grass Coun- ry."

While there is some reliable infor- nation available in regard to the use f silage in horse feeding, practically ll of it has been secured from the use f silage made from corn that had natured in a normal manner. This ear's silage has been made largely rom corn, Kafir and sweet sorghum cane) that was stunted by the rought, hence does not have as high eeding value and may not prove to e quite so wholesome as in years where the rainfall has been well dis- ributed. There are a few facts that hould be considered by those who ntend to use silage for horse feeding, which will reduce very materially the hances of unfavorable results.

The stomach of the horse is prob- ably more susceptible to any changes in food than that of any other ani- mal. It has been found in practice that heavy labor can be performed with less loss of weight where good, wholesome, dry feeds are used than where pasture, new hay or grain or other succulent foods are substituted. Particular feeders in many instances refuse to feed the new crop of grain and forage until after the first of Oc- tober, fearing that any change of that sort earlier in the season is liable to produce digestive disorders. In the selection of feeds for horses, the greatest care should be used to ob- tain feeds that are free from moulds or dust and that have been allowed to reach the proper stage of maturity before being harvested and have cur- ed before being stacked sufficiently to prevent "mow-burning." Whenever an opportunity to choose timothy hay cut at different stages of growth is of- fered, the horseman prefers that in which the seeds have been allowed to ripen before cutting rather than that in which the seeds are in the milk or dough stage. The cattleman, however, follows the opposite course and se- lects that which has been cut earliest in the season. These practices have grown up because experience has proven that horses have responded to them with more satisfaction than to those which are not followed.

The idle horse can, and should, be treated differently from the work horse, which permits the feeding of coarser and more bulky materials, al- though just as great care should be exercised to see that they are whole- some. Silage has been fed to horses in different sections of the country with varying degrees of success. When it first came into general use for feed- ing dairy cattle, the corn was cut at a very immature stage. This kind of silage, if fed to horses, resulted the same as feeding green corn, produc- ing colic, scours and other digestive disorders. In later years, silage has been fed successfully by many farm- ers, although in isolated cases it re- sults disastrously, probably due to one of several causes. It may have been made from immature crops, resulting in a very acid or sour silage; from crops that were too mature at time of filling, resulting in mouldy silage be- cause of failure to settle and exclude the air; poor preservation, due either to the method of filling or to the silo not being air-tight; to carelessness in feeding, permitting the material to start to decompose from one feed to another in parts of the silo, or to fail- ure on the part of feeder to use a suf- ficient amount of time in getting horses accustomed to a succulent feed after having been fed continuously on dry feed for a considerable period of time.

Silage made from corn, Kafir or sweet sorghum is very deficient in protein. When it is used extensively and not properly supplemented with alfalfa, clover, cowpeas or some other leguminous forage crop, a concentrat- ed nitrogenous feed such as linseed meal or cottonseed meal should be used. If this is neglected, horses as well as cattle are certain to have di- gestive disturbances due to an insuf- ficiency of protein as compared with other food nutrients.

Very little experimental work has been done by the various experiment stations in the feeding of horses, large- ly because of the fact that the limit- ed amount of money appropriated for experimental work will not permit of the purchase of a sufficient number of animals to overcome individual differ- ences. This is not only true in re- gard to feeding such feeds as silage, that occasionally results in permanent loss to the owner, but also is true of those feeds which are more widely used. The Pennsylvania station fed a group of horses for market, one-third of which were fed silage in quantities sufficient to replace one-half of the hay normally used. This resulted in a smaller consumption of grain, less expensive gains and a finish equal to that secured when dry feeds were fed exclusively. There were seven horses in the silage lot, six of which ate their feed with a relish. The seventh did not take kindly to it. Each horse was started on five pounds per head daily, which was increased gradually to fif- teen pounds at the end of the first week. A further increase was then made to twenty pounds per head daily, which was the maximum quan- tity fed.

During the eighty-four days of the test, the total quantity of silage fed per horse varied from 1040.3 pounds to 1536 pounds. No evil results of any sort were noted because of its use during the period when it was used, which demonstrates that where prop-

All persons are warned not to reprint any part of this paper without first securing written permission from the American Breeder, Kansas City, Mo.

ASKING QUESTIONS.

A reader complains that he sent in a question some time ago which was not answered. He states that it was nicely written and gave full details of the query and that he has watched every paper but has not seen this identical question answered.

We received four questions all practically the same, for that issue of the paper. The questions were rewritten so as to answer all four of the inquiries, covering the case plainly. The combined inquiry was signed "Kansas Subscriber." Those sending in questions from other states perhaps may not have noticed this inquiry on that account. It would have been useless for us to go into the details of each one of these questions when one answer provided full information concerning all.

We have made mention of this kind of a situation on numerous occasions and have asked our readers to read all of these questions carefully. A description of a particular case sent us by a reader may have a different headline from what he is expecting and he cannot depend on headlines alone. We believe every reader can profit by studying these questions and answers carefully. None of them know how soon they may need this information and need it quickly. We publish the information for all our readers. We want these questions and are very glad to have any reader make use of this method of bringing up points which result in giving valuable information to all.

A question sent in by anyone is almost sure to be of great interest to many.

There are some who write us asking for a reply by mail. We cannot give this service because it would take too much time. The smaller type of the heading under which we answer questions ("Questions and Answers") states plainly that no questions will be answered by mail. No one should be offended if their inquiries are not answered by mail. We want this information for the readers of the American Breeder. We want each one to get all there is in it. This can be only through each reader studying each question carefully.

INFORMATION IN PICTURES.

Everybody has seen the overdone pictures of animals which many papers print, showing draft horses bigger and broader, cattle smoother and more perfect and hogs fatter and shorter legged than any that ever lived. Such pictures have deceived some people and disgusted many more and never did the live stock business any good. The American Breeder has always barred them absolutely because they were not true. We use a great many pictures, but they must be true to life and they must have some educational value.

Beginning with the first state fair this year the American Breeder enlarged on this policy in order to give our readers the best kind of information on the live stock exhibits at these shows; we adopted the plan of publishing photographs of prize winning and other representative animals of the various important breeds. Most of the photographs are taken with special live stock cameras in many cases showing the animal in action, thus giving all the life possible to the pictures.

This is a real education in itself. During the fall we publish from 40 to 100 photographs in each paper. No other agricultural paper or magazine in the country prints anywhere nearly as many.

DEVELOPING STUD COLTS.

There are many breeders who enjoy raising pure bred horses but who do not seem to know what to do with the stud colts. Some have not been able to realize a fair market value for their colts. Too many colts are tied up in a stall without any exercise, their owners believing they are in possession of a "stud horse" just as soon as the colt makes a little noise. In order to bring about the greatest development, freedom is very essential.

We made mention of these facts in the last issue in connection with a plan by which these colts can be bunched and placed in the hands of someone who is prepared to thoroughly develop them. The plan is being used now with Percheron colts. We should like for every reader to add to the success of this plan, not only by sending in the number of colts he may have for sale, but by advising all others to do likewise.

The names and addresses of these owners will be separated into states, counties and towns so that a prospective purchaser may go to a town and call the owners of these colts over the telephone and find out what they are like and what the price will be. Every one who neglects this service will lose money, if he cares to dispose of his colts. We should like for every one interested in this plan to refer buyers to this service. Practically a complete list of all the stud colts in the country can be had when this is printed. Other breeds of horses will be taken up later.

LESS LABOR—MORE HEAD WORK.

In some cases a little less actual manual labor and a little more study might get better results. This is especially true with some horse breeders. Some of these stay at home a little too closely; they may have a little too much work on hands. A reasonable amount of traveling might be beneficial. Find out what the other fellow is doing. See what improvement he has incorporated. Take a look at his stock. See how he keeps them. These consultations are very valuable. A good show of live stock, representing the breeds interesting to an individual, affords an opportunity for investigation. A continual study of one's own section is valuable in numerous ways, but one way especially is in learning whether this breeder has the right kind of breeding stock for that locality or not. An occasional change sometimes gets better results. The breeder himself should be well posted as to the kind of stock his section demands. A reasonable amount of traveling and associating with other breeders will help him to decide these points.

"BRED AND OWNED BY EXHIBITOR."

The Percheron Society of America has a rule in connection with the awarding of "Percheron Society Specials" at the fairs, which requires winners of the same to be bred and owned by exhibitor. If an animal changes hands it cannot compete for Percheron Society money.

We would like to know what our readers think of this rule—whether it would be a greater help to the business to have this class open to all home bred animals, registered in that record, or is it better to encourage only the breeders to develop and show their own produce Are there enough breeders showing Percherons to bring out the best in the breed? Will this rule eventually encourage all of the breeders to participate, and develop and show their own produce? Would it be better to have some of the fine specimens go into the hands of experienced showmen who can more thoroughly fit and exhibit stock to the best advantage? Would the home bred Percherons make a better showing if this rule was changed to include all home bred Percherons, regardless of who bred them? Can the small breeder who has only a few, successfully prepare animals to compete with the professional showmen?

These are questions that should be settled before the next annual meeting of the Percheron Society of America, held during the International Live Stock Show at Chicago. We would be glad to have our readers express their views on this subject.

MARE OWNERS' EDITIONS.

A few years ago requests were made for short time subscriptions to mare owners during the winter months. This experiment was tried and found to be very successful. It has grown in favor with the substantial horse breeders who wish to enlighten their people. It has also been found very successful for those who wish to increase their patronage. This demand has grown to the extent that a great many of our regular readers look forward to the time when they can send the short time subscriptions to their mare owners. A trial seems to convince a breeder that it is profitable to him and his customers.

This season there will be five issues, the last issue of January, two in February and two in March. We notify each one of the new subscribers by mail that their subscription for a certain length of time has been paid by their friend, giving his name, and requesting them to thank him for the courtesy. These five issues in clubs of ten will cost $1 for each club; each additional subscription for the five issues will cost ten cents. Each subscriber will receive all of the five papers and the mail notification. One hundred subscriptions will cost only $10. How could any breeder spend $10 to a better advantage? Every time one of these mare owners receives one of these papers he will remember his obligation to the one who has paid his subscription.

It is a wonderful advertisement; it should save hundreds of dollars' worth of colts in every community. The mares will be found in a better condition. In fact, the mare owners will receive a lot of valuable information which will be new to them and indispensable. In other word, these short time subscriptions will make harmony between the breeder and his customers. It will help to prevent this great spread of infection, which is all together too common. There will be special features for the benefit of the mare owners, in addition to the big stallion show, which will be an "eye opener" for them in the use of better sires. This information will last a long time and should produce permanent results from the start. All reliable education carried on in a breeder's community means a more satisfactory business.

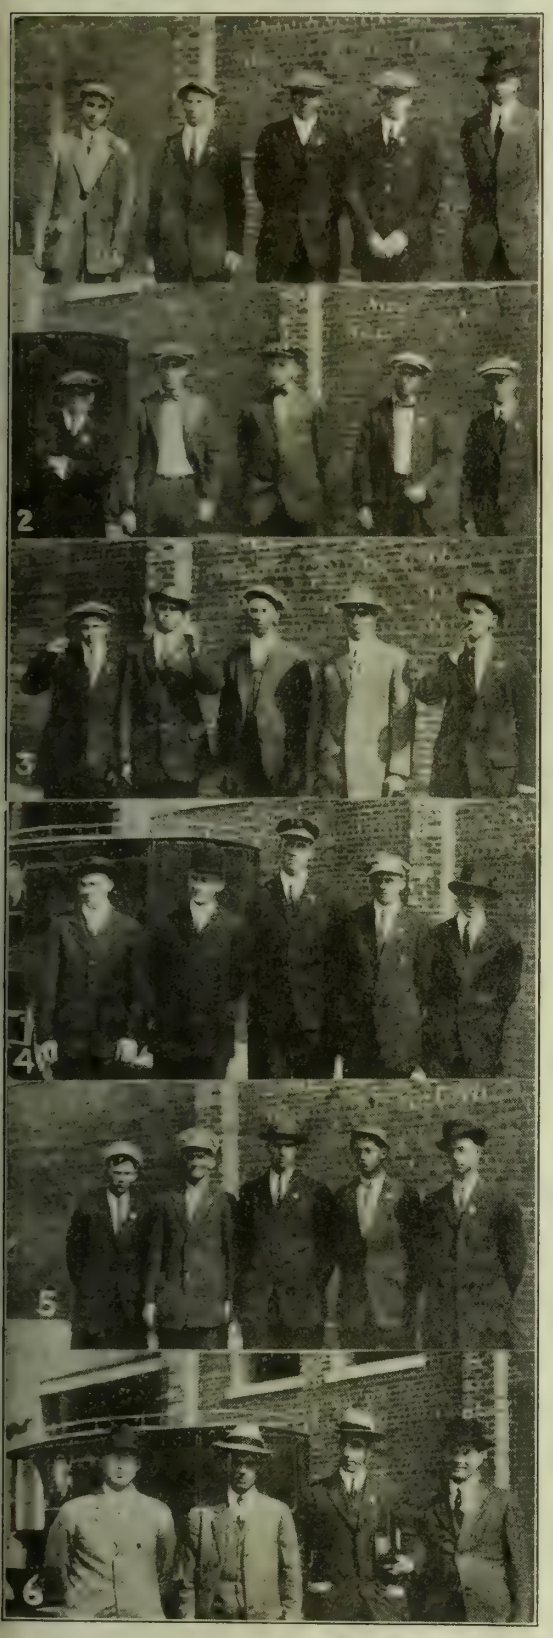
Breeders should begin now to get these names and addresses together The substantial men in a community are the best leaders. The price we have made is a little less than the actual cost, but we can afford to do this in order to introduce the American Breeder into new homes where it is very likely to make permanent readers. These subscriptions should be received at this office by January 1.

USE THE SCALES.

There are mighty few more instructive or useful implements on any farm than a set of platform scales. Such a scale can easily save its cost in the buying of feed alone, on any farm where much feed is bought.

But the chief instruction comes in learning the weights of animals and their rates of growth or gain. Definite information along this line is necessary in determining relative merit of animals and of methods of feeding When one has his own scales, ready for use at any time, he will detect quickly anything that is not going right with stock on feed, and often finds the need of a change in care or rations weeks before he would feel certain of it did he not have the accurate evidence of the scales to guide him.

One of the most successful colt raising communities we ever knew did most of its breeding at the barns of a breeder who had a good pitless platform scale in the wide driveway leading to his barn. His customers were encouraged to weigh their mares and colts whenever they came to the barn Memoranda was kept of the weights particularly of the colts, and soon there was quite a rivalry among the farmers as to whose colts would show the best gains. It led to better care not only of the colts but of the mares as well. Later a big piece of cardboard was ruled off and tacked up on the scale box and on this several nearby farmers owning some of the better mares kept a regular monthly record of the gains made by their colts.



Pitless scales can be put up without much expenses, in almost any convenient location, and if it becomes desirable they can be moved without difficulty. They should be well housed, however, so as to be accurate. In the case just mentioned the served the purpose of a colt show and in some ways more satisfactorily than a colt show could, for while there could decide nothing as to conformation and soundness, there was no question and no hard feelings concerning the decisions they did make.

ATTENDING LOCAL PUBLIC SALE

Stallion and jack owners might spend a little time to good advantage by keeping track of all public sales in their vicinities. This will help t

eep in touch with the mares that are eing sold at such sales; also afford n opportunity to visit new customers nd find out what mares are likely to e in foal and to learn where tran- ent farmers are liable to be in the pring. In some sections the moving me is in the fall, while in other lo- alities spring is the principal time r moving. A little effort at this me will help to keep a check on the ares so that not many of them will ave the country without the breeder nowing it.

EEDING ENSILAGE TO HORSES.

(Continued from page 3.)

precautions are taken in harvesting, storing and feeding silage, it will prove to be a wholesome feed in the hands of a careful man. Because of its nature, however, it would not be a safe feed in the hands of one who is in any way careless.

As the total saving because of its use in horse feeding on the average farm is so slight, it is doubtful whether or not its general use should be advocated. Where horses are being grown or developed or carried through the winter in idleness, it would have a greater usefulness than where horses were at work. More study and investigation of its effect upon horses will result in approved methods free from danger being devised.

WHERE TO BUY BREEDING STOCK

Quite frequently an individual who is in the market for breeding stock does not know where to look for the animals he needs. Some are afraid to buy of strangers for fear they will be "skinned." If any reader should know of such an individual we would be glad to have him advise this person to send and get a free sample copy of the American Breeder. The policy of this paper is to carry the business of only honorable and reliable advertisers. There are quite a few firms that cannot advertise in this paper at any price—we will not accept their business. A free sample copy will put the purchaser in correspondence with a large number of owners of the best stock in the country—men in whom they can have confidence. If it does not contain advertising of the kind of stock wanted we will try to locate someone who has that kind.

To the American Breeder:—I am getting from seven to ten letters per day in answer to my ad. and wish to have you leave it out the next issue till I get my breath and work out these inquiries. Meanwhile I wish to have you print another ad, which I enclose on separate sheet.—H. H. Burns, Sumner County, Kas.

Review of the Fair Season

The seven weeks' season of corn belt state fairs and live stock shows, which closed with the American Royal at Kansas City and the Illinois State Fair at Springfield, was one of the most interesting in several years. Many things had made conditions unusual and fairs are looked upon as sort of barometers of the coming winter's business.

The summer's unwonted heat and drought was expected to result in a lowered attendance at many points, and it did in case of the earlier fairs, even in Iowa, where the crop damage had been small compared with sections farther south and west. But as the season progressed crowds got back to normal, Illinois, the American Royal, Ohio, Indiana and the Minnesota fairs enjoying some of the biggest days in their history, while the Missouri fair, as a whole, was above the average in interest and attendance. The newest fair (at Oklahoma City) with every excuse for retrenchment, had creditable crowds and exhibits. This change is no more than in keeping with the greatly improved conditions, agriculturally and with the stability of the live stock brand of agriculture as an institution.

That the draft horse exhibits would be strong was the almost certain sequel to a winter and spring business season in which draft geldings had reached the highest levels in history and in which a shortage of mares capable of producing high class draft stock (either horses or mules) had been clearly proven. The Iowa State Fair, always strong on draft horses, had what was probably its most notable showing of draft yearlings and colts, with all other rings well filled. The Nebraska fair had the best all round draft horse show in its history, though not its largest in some rings. Here, as well as at the shows to the south, the increase in the number of small exhibitors, was the feature. There were fewer exhibits from big importing barns and some of the best things out came in the small exhibits. This condition was true also of the shows at Sedalia, Mo., and Kansas City. At these shows, the evidence of strong draft stock demand was most strikingly shown in the mule section. Missouri always has a good mule show, but this year the home exhibits were joined by a strong string from Illinois, which took a considerable collection of ribbons back across the Mississippi. But strong as was the show at Sedalia, it was outclassed at Kansas City in the bone scale and general excellence of the draft mules. A mention elsewhere in this paper of the sales made during the show furnish verification on this point. The draft horse show at the Illinois State Fair was big and classy as usual, presaging great things for the opening of the winter show season at Chicago.

The surprise of the season (if it should be called a surprise), came in the growing strength of saddle and show horse sections. The growing appreciation of the American saddle horse as the most handsome and spiritedly intelligent of all domestic animals, should not be wondered at, but the size and excellence of the so-called pleasure horse rings at the state fairs, and the interest shown, has undeniably been an eye opener. The culmination for the season came at Sedalia, when the greatest ring of saddlers ever seen competed for a stake of $2,900, following four days of lesser events. As this is being written entrants in Kansas City's revived Convention Hall horse show are being led past the offices of the American Breeder.

The meat situation (with hog cholera and feed scarcity as temporal influences) was expected to manifest itself one way or another in the hog and beef cattle sections at the fairs. Indirectly hog cholera knocked quite a hole in the hog show at Des Moines. A vaccination requirement that the fair management had made prevented many from filing, and was repealed too late. Vaccination, while it doubtless will some day solve the cholera problem, at present lacks several per cent of being generally accepted at par. At the other fairs, as at Des Moines, only local or temporary conditions seemed to interfere with a strong showing of hogs. The confidence of the breeder in the pork market was never better.

Beef cattle exhibits were a puzzle. Nearly every fair had strong Hereford exhibits. Kansas City, with by far the biggest Hereford show of the year, got some herds which would have been at Springfield had the Illinois fair not been deprived of the Hereford Association money because of its refusal to abide by the arrangement of dates agreed upon by the Association of State Fair Managers. Iowa had one of the smallest Shorthorn exhibits it has ever had. Many Iowa breeders who were visitors instead of exhibitors, as formerly, stated that their herds had been reduced in times of slack business to a point which left them unable to supply the past year's heavy demand for breeding stock, and that their young stuff, from which their showings would have to come, had been sold close for many months. This is doubtless a common condition. Demand for breeding Shorthorns usually starts east of the Mississippi and moves west. At Nebraska the Shorthorn show was relatively a great deal better, and there was plenty of evidence, too, of buying at good prices. That this scarcity of breeding stock is general was strikingly illustrated at Kansas City, where the usual association sales in connection with the American Royal had all been abandoned for lack of entries, excepting the Hereford sale. This was pulled off with success, 47 head selling at an average of $384.68. Angus and Galloway exhibits seemed to show about the same proportionate shrinkage generally, as Shorthorns.

In this discussion of shrinkages and relative figures it is interesting to note that 12 or 14 years ago, when the American Royal began, there were practically the same numbers shown as at this last meeting—about 240 head—and in addition there were 300 head of sale cattle, as against the 47

BRING OUT YOUR SUFFOLK STALLIONS

ENTRIES CLOSE NOVEMBER 10th.

Competition in this contest is limited to mature animals—that is, stallions four years old or over. Each one, as its photo and description are received, will be given an entry number, which will be published with the picture and measurements. No names will be given out until the awards are made. Then all of the entry numbers will be published, along with the names of the stallions, and owners who entered them. Each photograph should give a straight side view of the stallion's body, but may show his head turned slightly toward the camera if the owner desires. Only a few measurements are required. The blank below shows which ones. These measurements, and a good, clear photograph will show pretty accurately to an experienced man, what the stallion is as an individual. Measurements should be taken with a tape line drawn tight enough to press tight to the skin, but not enough to press into the flesh. We reserve the right to have a committee remeasure any animal and to publish the result of its findings. Photographs can be any size, but those on which the stallion's body measures, in length, three to six inches are usually best. It is most important that they be clear and that the stallion stands straight and naturally when photographed.

Make all entries in the blank below; clip it out and mail to the American Breeder.

REVIEW OF FAIR SEASON.

(Continued from page 6).

head of sale cattle at this last show. Evidently between these two dates the business of producing improving blood for use in beef production has not been enjoying any more encouragement than it was entitled to. But whatever may be said of numbers, the interest in beef cattle this year was strong and was evidenced in all quarters.

It would be debatable logic to say that the fairs proved anything as to the live stock business, but from what could be learned both from and at the fairs, it is evident that we are back to a realization which makes itself felt in this country about every so often, viz., that the only permanently successful farming practices call for keeping live stock on the land, and that in selecting the live stock and methods, labor and locality must be importantly considered, but most important of all is to have live stock of a grade and quality to justify the labor and investment which it entails. At every state fair this fall one could readily convince himself by starting a few ringside conversations, that people are studying this point.

A WRONG IDEA ABOUT ALFALFA.

The unqualified recommendation as a soil improver that is continually being given alfalfa is responsible for the very common belief that this crop is one which should be grown extensively on poor or unproductive soils. No greater mistake could be made than to sow alfalfa, especially in the Eastern states, on land which is not in a high condition of fertility.

It is true that, being a legume, it benefits the soil through the addition of nitrogen fixed by organisms forming nodules on its roots, and through its roots it not only supplies considerable quantities of humus but greatly improves the mechanical condition of the soil.

In producing profitable yields of hay, alfalfa utilizes large quantities of phosphorus and potassium, which must be obtained either directly from the soil or from added fertilizer.

Whether alfalfa is a soil improver is a question which can not be answered without some explanation. In the sense in which the term is commonly used, alfalfa is not a soil improving crop, since it can not be utilized in the same manner as cowpeas, soy beans, crimson clover, or hairy vetch for the building up of worn-out or depleted lands. On the other hand, it enriches the good soils through the nitrogen and humus added to the soil by its roots and crowns when the old field of alfalfa is broken up and also by the mechanical action of its roots upon the soil. Furthermore, the preparation of the land prior to seeding the alfalfa and the treatment in the way of top dressing and fertilizing which follow during the few years of its existence doubtless have a very beneficial effect on the crops succeeding it.

In actual practice, then, alfalfa improves good land but can not be considered in connection with poor land, as it is not a profitable crop to grow on unfertile soils.

To the American Breeder:—A new rope, particularly if it be sisal, often causes trouble because of its stiffness. If used as a hay fork rope, or in any place where it runs through a set of pulleys, it is apt to be troublesome until it has been used for some time. This trouble may be avoided by boiling the rope in water. The plan usually used is to coil the rope in a boiler or large soap kettle and cover with water and bring to boiling heat. The rope is then stretched out and allowed to dry, when it will be found to be soft and pliable. Manila rope is usually soft enough to use without such treatment.—J. M. Drew, University Farm, Minnesota.

Horse Figures Stiffening

Common Stuff Unchanged But Prices Firm and Good on Drafty Mules or Horses. Cattle Market Pausing on Fairly High Level. Hogs and Sheep Weakened.

While the trade in horses and mules has furnished no new thrills in the past two weeks, demand has broadened and prices are on a firmer basis. This refers to classes that grade from medium up, and the common kinds are worth no more now than they were when choice grades were selling a few years ago at half the prices they bring now. The largest demand zone is the South and East. The South is buying both horses and mules, and the East is taking good rugged workers, expressers, chunks, and drafters. Medium drafters are fairly plentiful, and choice drafters scarce. Country buyers complain that they cannot get heavy drafters enough under market prices to pay for handling. This has resulted from growers being as well informed as buyers on the status of prices, and also their conviction that good horses are as staple an article as other farm products. The present high prices are as much the result of better information as they are the offspring of other conditions.

The trade is optimistic on the future of the market. Recent rains have developed unexpected growth in grass, rye, millet, Kafir, sorghums and alfalfa is plentiful, and while not primarily horse feed, they lessen the requirements of grain for other stock. Corn, oats and hay prices are lower than a month ago, and the government estimate issued this month indicates larger yields of all grain than the September report. It is a sort of a reinforcement to the trade to have crop conditions look up. It encourages the grower to hold young stock, the transfer man in the city to be more willing to provide increased horse power and the feeder to venture back in the game again. Few good thin horses have been offered, as increased pasturage checked the movement. There is some increased demand on feeding accounts, but the general sentiment is to let the game alone this year. According to the formula of one feeder this will be a good year to fatten horses. His theory is that each year holds out its opportunity in the live stock industry, and those opportunities are to be judged by going opposite to the crowd.

When the tide is turning to feeding cattle, hogs or sheep, get into the breeding game, and when all are being fed and bred, get into horse feeding. Next spring will probably award him the premium for his fed horses and mules. In Pennsylvania and Ohio, where a good many horses were fed last year, they are turning to cattle feeding this year, and recruiting their supplies from the Canadian belt by way of Buffalo.

The following quotations are for serviceably sound horses and mules, 4 to 7 years old:

Horses—	
Drafters, choice, 1600 lbs. up.	$250@285
Drafters, fair to good	165@245
Chunks, fair to choice	140@185
Chunks, fair to good	100@140
Expressers and light draft	75@125
Plain workers	60@ 95
Southerns, good	140@175
Southerns, plain to fair	90@135
Plugs	15@ 45
Mules—	
13 to 14 hands	$ 95@140
14 to 15½ hands	135@175
15½ to 16 hands	165@215
16 to 16½ hands	210@300

Hesitating Cattle Trade.

Prices for fat cattle show little net change, compared with two weeks ago. In some particulars prime grades of the lighter weight class are higher, but the heavy grades are a little lower. Western grass fat steers are selling slowly and at about the same price as two weeks ago. Last week was the high point of the season, and compared with that level prices are off 15 to 35 cents, the greatest loss being on Western grades. Packers are trying to hold the market in check. Swift & Co. imported 4,000 quarters of Argentina beef from London, and other shiploads are reported on the way. The London market broke last week and the packers swung this cheap beef across the Atlantic with the view of breaking prices. Armour & Co. is following that lead, and the stress of the packing fraternities' effort seems directed against breaking the prices on the lower class of cattle. Cudahy shipped thirty carloads of steers, cows, heifers and bulls from Florida to Kansas City this week. They were "canner" grades of a low type. That company has had buyers in the Southern states for some time and it is reported that further large consignments will be made. While the main stress in the market is against the plainer classes, the good to choice kinds are scarce and selling readily. Yearlings are preferred. The top price for the light class in Chicago was $9.60. Omaha also reported such a sale. Yearlings in Kansas City made $9.55 and in St. Louis $9.50. Heavy steers sold up to $9.25, and the bulk of the short fed steers brought $8 to $8.75. The market for straight grass fat steers needs some nursing. Receipts have been heavy from Texas and Colorado, though the Northwest run to Chicago is light. Some fed Western steers sold at $8.25 to $8.65, and most of the straight grassers are bringing $7.25 to $7.90. A big bunch of the Zimmerman Dakota-Mexico steers sold in Chicago at $6.60, the same price that Mexico-Panhandles brought in Kansas City last week. On the quarantine side receipts showed a great variety of quality. Some fed steers sold at $8.50 to $8.75, the highest prices of the season, and a lot of inferior Arkansas grassers sold as low as $4.85. The bulk of these Southern steers brought $6 to $6.50, and possessed inferior killing quality. The cotton belt of Texas and Oklahoma will do considerable feeding this year for the late winter market. Reports from all sections are that the winter pasture promises to be the best in a number of years past.

Quotations from the various grades of killing steers are as follows:

Prime corn fat steers	$8.85@9.50
Good to choice steers	8.25@8.80
Fair to good steers	7.75@8.20
Common to fair steers	7.00@7.75
Meal fed, choice	7.75@8.40
Meal fed, common to fair	6.25@7.70

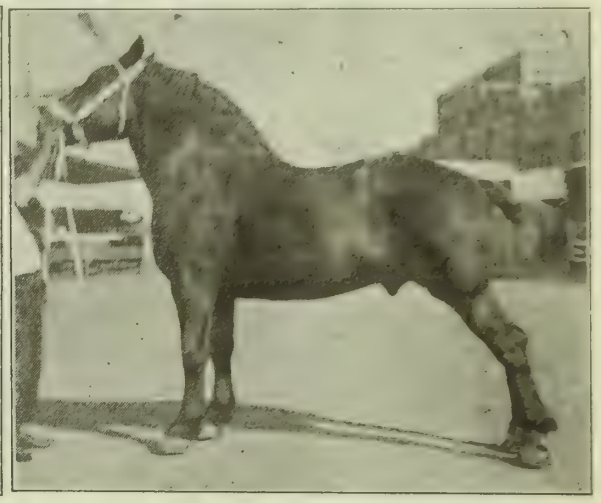
COLLEGE WINNERS AT THE "ROYAL."
1—Leslie Ross and Kansas' first prize Shorthorn steer calf. 2—Arthur Rhys and Missouri's first prize Angus yearling steer. 3—Galloway steers; Kansas' first yearling and Missouri's first prize calf.

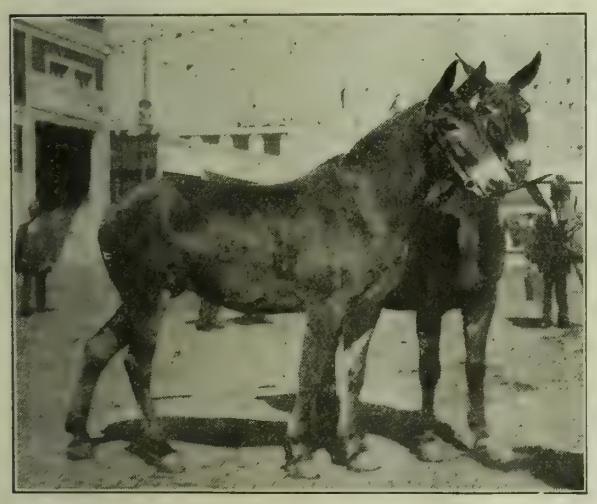
American Breeder Camera at the Season's Closing Shows

Kansas City—Lee Bros'. first prize two-year old Percheron stallion, Reinhard.

Springfield, Ill.—Oltmanns' team of prize winning Oldenburg coach horses.



Springfield, Ill.—Detwiler's first prized aged Percheron stallion in the home bred class.



Springfield, Ill.—A picturesque saddler. Note his flaxen "flag" and mane.

Kansas City—O. Harris & Son's junior champion Hereford bull, Repeater 7th.

Kansas City—Lee Bros'. first prize three year old Percheron, Kanajrou.

Kansas City—C. S. Miles & Son's second prize aged mule team.

Springfield, Ill.—Ira Sharpe's first prize saddle mare; Miss Sharpe up.

Kansas City—Swofford's three year old champion mule team that sold for $1,000.

Springfield, Ill.—Paul Brown's gaited saddler, Gingerbread Man.

Kansas City—Lew Jones' half Shetland saddle pony.

Kansas City—Frank Harding's champion Shorthorn bull in his stall.

MARKET REVIEW.

(Continued from page 8.)

While the entire trend in the market demonstrates that packers are trying to reinforce their supply of low grade beef by importations and by gathering up common Southern cattle, there appears to be little weakness in the butcher cattle market. Country buyers are keeping up an insistent demand for breeding cows and heifers, and packers have to beat them out in price or lose out on the beef. For two weeks past the "canner" end from the range has been bringing $4.25 to $4.65, and cutters $4.75 to $5.50. The good range cows have brought $5.65 to $6.75, and at such prices the supply has been below requirements. Fed cows sold at $7 to $7.50, heifers up to $9 and steers and heifers mixed up to $9.25. Such prices are 10 to 25 cents higher than two weeks ago. Veal calves sold steady. Top in the West $10, and in the East $11.50. Prices for bulls are quoted stronger.

The following quotations are for the various grades of butcher stuff:

Cows—	
Choice	$6.75@ 7.50
Fair to good	6.00@ 6.75
Common to fair	5.50@ 6.00
Canners	4.25@ 4.75
Heifers—	
Choice fed	$8.25@ 9.00
Good to choice	7.50@ 8.25
Plain to fair	6.50@ 7.40
Common	5.50@ 6.45
Veal calves	6.00@10.00
Bulls	4.00@ 7.25

High Prices Narrow Stocker Trade.

Prices of stockers and feeders attained such high levels the first week in October that many prospective buyers withdrew from the market to await for lower prices. The past week the market tended downward, but the decline was not sufficient to bring out renewed demand. Panhandle and Colorado stockers and feeders have been offered freely and about 75,000 thin cattle have gone back to the country in the first two weeks this month from the local market. Prices have ranged from $5.75 for inferior grades up to $8.65 for the half fat kinds that can be turned back to the market after a short feed. Most of the Panhandles sold at $7.25 to $7.65, and Colorados at $6.50 to $7.50. Stock cows and heifers show little variation in prices. Demand is active and prices firm. A good many more female cattle of the right grade could be used than is now offered. Stock calves are quoted at $6 to $8.50 and are scarce.

Selected feeders	$ 8.00@ 8.50
Good to choice feeders	7.40@ 7.90
Plain to fair feeders	6.50@ 7.35
Good to choice stockers	7.25@ 7.75
Selected stockers	7.75@ 8.40
Plain to fair stockers	5.85@ 7.20
Stock calves	6.00@ 8.50
Stock cows	4.75@ 6.75
Stock heifers	5.50@ 7.50
Milch cows	35.00@90.00

Weak Market for Hogs.

The hog market is acting like the bottom may drop out at any time and the $8 quotation be eliminated. There have been a few attempts to rally the market, but the general tendency is downward, and the $8 price is preserved only by the generosity of the packers. Receipts have been liberal for the first two weeks in October, but the quality has improved some, and for that reason packers have bought freely on the breaks. However much the short supplies of the future may be a bullish element packers have not found it convenient to make this a month for storing product. In Chicago the top price fell to $8.50, or $1.25 under the high price of September, and in Kansas City the top was depressed to $8.30, or $1 under the high September price. A good many plain hogs have sold below $8, but good grades are selling at $8 to $8.25. Shippers are of little consequence in the market, and as cooler weather approaches, packers will have the trade in their own hands. November is expected to develop liberal receipts, but by January the supply will be much lighter, and March may see a return engagement of the $10 hog. Marketing will be primarily at under weight owing to the scarcity of corn.

The following quotations are for hogs on April 16:

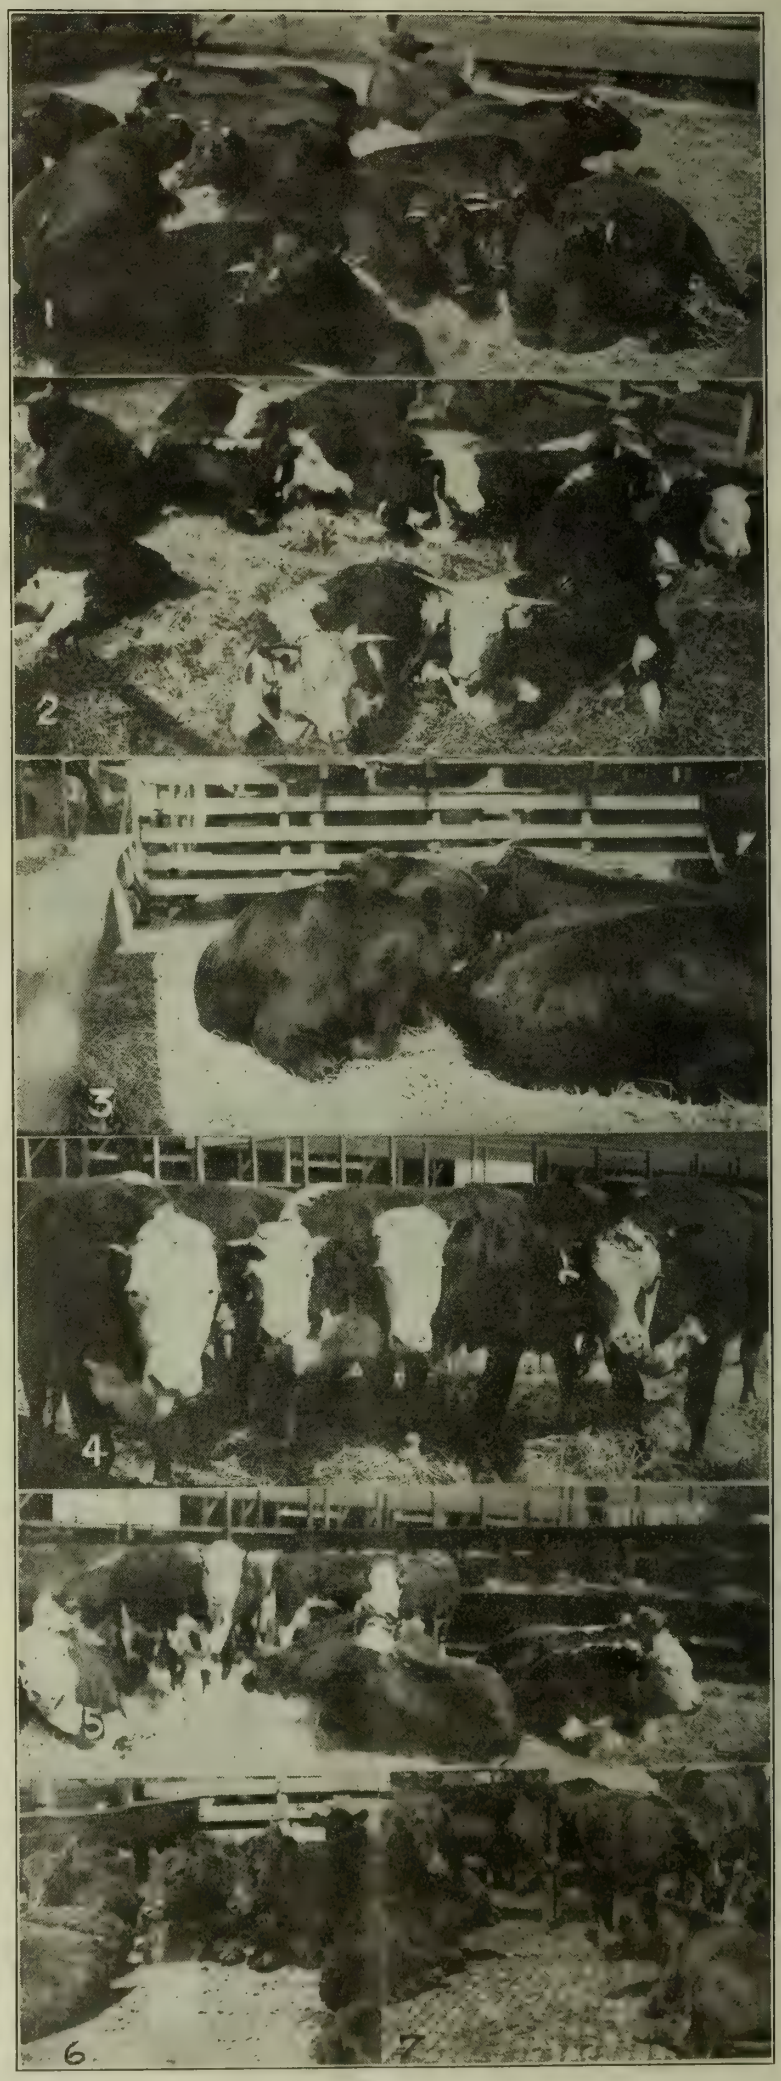
Choice, 250@300 lbs	$8.10@8.32½
Choice, 200@245 lbs	8.00@8.30
Medium weight	7.95@@8.30
Light weight	8.00@8.30
Common to fair	7.85@8.10
Stags	6.50@8.00
Boars	4.00@5.50
Bulk of sales	8.00@8.30

The following table shows the range in hog prices in the last two weeks of April:

		Preceding Week.
Mon., Oct. 13.	$8.10@8.45	$8.15@8.47½
Tuesday	8.05@8.45	8.10@8.40
Wednesday	8.00@8.37½	7.85@8.30
Thursday	7.90@8.30	7.90@8.30
Friday	7.85@8.30	8.00@8.40
Saturday		8.20@8.27½

Lower Sheep Prices.

Deep snows in the mountain ranges has caused another market outpouring of sheep. Receipts in the past two weeks were as heavy as in any previous similar period this year, and the quality plainer. A larger per cent of the offerings have shown only feeder quality. Many flocks have already started to the winter ranges, and the remaining surplus is waiting cars for shipment. This insures liberal receipts for the rest of this month. Prices have declined 25 to 40 cents, and are the lowest of the past few weeks. Fat lambs are quoted at $6.25 to $6.75, yearlings $4.75 to $5.50, ewes $3.75 to $4.50 and wethers $4 to $4.75. Trade in stock and feeding grades has been active, though prices are some lower. Feeding lambs are quoted at $5.50 to $6.35.



INDIAN IRRIGATED LANDS FOR LEASE.

The United States Government, through the office of Indian Affairs, is offering to homeseekers about 45,000 acres of fine irrigated land on the Shoshone or Wind River Reservation. This reservation is located in the central western part of the State of Wyoming and is on the main highway from the southeast into the Jackson Hole country and the Yellowstone National Park. The climate is delightful, being free from extreme heat in summer, and while the temperature is sometimes low in winter, there is little snow, and the air is clear, dry and bracing. The soil varies from a medium heavy clay loam in the valleys to a rather light sandy loam on the divides and is deep and fertile. The region is semiarid, and water for irrigation, which is necessary for the growing of crops, is furnished by a fine and ample system constructed by the Government.

Some of these valuable irrigated tracts may be purchased on easy terms and others may be leased for 10-year periods. The Government has decided to be most liberal in regard to leasing and has authorized the superintendent of the Shoshone Indian school at Wind River, Wyo., who has charge of the reservation, to make leases in his discretion, the only fixed terms being that the lessee shall make beneficial use of the water on all irrigable lands covered by his lease; that the leased tract shall be legally fenced; that an irrigation maintenance fee of 60 cents per acre shall be paid during the last half of the lease period; and that not less than one-fourth of each tract shall be seeded to alfalfa, a good stand being left at the expiration of the lease. Lessees can obtain possession of the premises at once.

The cotton crop, October 1, was reported by the government as showing a condition of 64.1. This is four and one-half points below the average condition for the past ten years.

Samples of the American Royal Car Lot Show

1—K. G. Gigstad's grand champion fat steers (yearling Shorthorns), sold for $12.85 per cwt. 2—C. J. Solt's first prize Hereford yearlings, sold for $10 per cwt. 3—Part of J. F. Henderson's third prize Shorthorn two-year-olds, sold at $9. 4—McNamara Bros'. sixth prize Hereford two-year-olds, sold at $9.40. 5—C. V. Hull's fourth prize Hereford two-year-olds, sold at $9.75. 6—J. E. Meserve's Galloway feeder calves (champions). 7—Sutton & Workman's first prize Angus feeder calves.

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay

Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000

for erecting your buildings, fencing, sinking well and breaking. You have twenty years in which to repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based On Good Land

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps. Write today.

FOR SALE—Town lots in all growing towns—Ask for information concerning openings.

160 ACRE FARM FOR SALE.

I have moved to town to take up the breeding business exclusively and will sell my farm located 4½ miles from town of two railroads. Missouri Pacific and Atchison, Topeka & Santa Fe. All bottom land; black sandy loam. Spring creek passes through middle of farm; two wells of good water in abundance; 40 acres in alfalfa, fenced hog tight; every acre first class alfalfa land; 8 room house; large cellar; good orchard; grade school; school wagon run by district. Two story barn with basement; lots of grain room; big hedge on outside lines. Farm well arranged for two 80 acre homes, or 240 acres of cheap upland pasture may be had in connection, making an ideal stock farm. Price, $10,000 if sold soon. Will carry $3,500 at six per cent. Address,

H. H. BURNS,
Argonia, Sumner County, Kansas.

Alfalfa As a Money Maker

Rich alluvial soil is what is wanted for the successful growing of Alfalfa, the king of forage crops. The Red River Valley has this kind of soil in abundance—nothing better anywhere. We can recommend this land to well-to-do farmers who want something really good. Ample rainfall.

A Crop Every Year

Write for free booklets and magazines to the Kansas City Southern Ry., Wm. Nicholson, Immigration Agent, 671 Thayer Building, Kansas City, Mo.

LAND AND OTHER PROPERTY FOR JACKS AND JENNETS.

Or for sale; 102 acres good land in Chariton County, Mo., splendid residence in best part of Chillicothe, Mo.; five passenger Overland automobile in good condition. Also several head of good registered Percheron mares, bred to imported stallion. Address,

D. B. KIRBY, Grain Valley Mo., or LOUIS H. GOULD, Greenville, Texas.

AUTOMOBILE WANTED.

Will exchange 60 acres of smooth blue grass land five miles from Richland, Pulaski County, Missouri, for an automobile. Address

LOCK BOX 20, Muscotah, Kas.

EQUINE TYPES AT THE ILLINOIS STATE FAIR.

One of Taylor & Jones' two year old Percherons, lower left; J. R. Peak & Son's first prize gentleman's driver, lower center.

COMMON DIGESTIVE DISTURBANCES OF THE HORSE.

Probably at no time of the year should the farmer be more careful in feeding the horse than now. This is due to the fact that new hay and grain, most of which is not yet thoroughly cured, are now being fed, and that the horse is required to work long hours with short time for feeding, so that it may be said that he has to engorge himself with an entire change of feed in from one-half to one hour.

Many animals having a rest of a few weeks to a month previously are put into the harvest field and the driver, thinking to fatten the horses hastily or to take extra good care of them, places before them many more times the quantity of feed than the animal normally consumes. As a result some animals being naturally heavy feeders engorge themselves and impaction or over-distention of the bowels results. If not soon relieved inflammation of the bowels results, as the dry food is a severe irritant and the animal often dies before competent help can be secured.

New hay and grain are not as digestible as the older feed. If fed in large quantities it frequently is not digested but ferments and causes the bowels to become greatly distended with gas. The excessive pressure of the gas bears so hard on the important organs as the heart and lungs that they cannot function properly. In some cases rupture of the bowels or diaphragm results with death in but a very few minutes.

Another result of improper feeding is what is known as spasmodic colic or cramps, in which the animal has very severe bowel pains at intervals, between the pains the animal is quiet and may even feed. This is brought on by drinking large quantities of cold water while warm, sudden change of feed and exposure to cold, as standing out on cold nights without blanketing.

Musty and mouldy feed frequently cause diseases as digestive disturbances, heaves, pneumonia and especially nervous troubles. While the majority of the moulds do not produce disease themselves, they leave the feed on which they are growing a suitable seed bed for other growths which may cause numerous disturbances. However, a few moulds are poisonous. These cannot be distinguished on the feed but require laboratory examination for their classification.

Other causes of digestive troubles are, feeding grain before hay, and watering the animal after feeding. As oats require more time for stomach digestion than hay, it can be seen that the practice of either of these methods will produce the same result, oats not having enough time for proper stomach digestion, will also not digest as thoroughly in the intestines, indigestion being the final result.

In summary, it can be said that most bowel troubles are due to improper feeding. Improper feeding implying, feeding too large a quantity at a feed, too sudden change of feed, feeding musty or mouldy hay, feeding grain before hay and watering after feeding.

No one treatment can be given that will prove successful, as each case requires a definite diagnosis and a study into the cause of the condition.

Preventative means are the most successful in the eradication of this trouble from the farm. A close study of the food requirements, which differ greatly in different animals, and supplying the animals with clean, sweet, well cured hay and grain, in amounts which he will just clean up at a feed, will prevent the majority of digestive troubles so common at this season of the year.——A. R. Hahner, Veterinarian, Idaho Experiment Station.

QUESTIONS AND ANSWERS

PERHAPS NAVEL ILL—I have a draft colt three months old which has a small bunch in front of the right stifle. It came on about ten days ago and is soft. I have been using iodine ointment on it every other evening and it is about the same, until of late I notice that it cracks when the colt walks. The colt is not fat but in good order; weighs 510 pounds. It did not hurt itself in any way that I know of. —Ohio Subscriber.

REPLY—We are always suspicious of these capsular distensions in young colts and fear that it has suffered a mild infection at some previous time through the navel. Iodine preparations give about as good results at this stage as anything one can use, and we would advise that you continue the treatment sufficiently often to cause soreness or irritation of the skin.

BARREN HEIFER—I have a two-year-old registered heifer that won't breed. Can you tell me what to do to make her breed? I gave $50 for her and I don't want to lose her. I would be glad for any information you can give.—Texas Subscriber.

REPLY—No one can tell you just why your heifer fails to breed without more information. You should make a careful examination and give a complete description of the generative organs.

WATER SEEDS—Will you kindly tell me what causes water seeds to come after castration. I have some mules I castrated with an emasculator that have water seeds. Would like to know what to do with them. Would you recut them or not? I cut for the public.—Texas Subscriber.

REPLY—So-called water seeds result from a failure to properly open the inner tunics or from infection. In order to remove the difficulty it is necessary to submit the animals to a surgical operation.

LOUSY JACK—Can you give me a remedy for lousy jacks? Have been bothered with lice on my jacks for several years. Will it injure a jack to use dip for lice?—Missouri Subscriber.

REPLY—Nothing is more effective and safe in destroying external parasites on colts and jacks than an emulsion made up with soap, kerosene and water. Boil a pound of laundry soap in three quarts of rainwater until thoroughly dissolved, and while boiling carefully and gradually add two quarts of kerosene, stirring briskly with a large spoon while adding. This will result in the formation of a thick, creamy emulsion which should be diluted with eight parts of warm rainwater when used. Thoroughly wet the animal's body all over, selecting a bright warm day in a protected place, and repeat in a week if lice are still found. Thoroughly clean up the premises, burning all litter and disinfect his stall after being cleaned, with a solution of creolin, using one part of the drug to 50 parts of rain water.

NEW GROWTH—I have a cow with a cancer on her eye, or I suppose that is what it is. Is there any cure for it? If so, will you please print it?—Kansas Subscriber.

REPLY—Growths such as you refer to are nearly always malignant in character, and, as a rule, involve the structures so deeply before their true nature is made out that they are beyond help. Surgical measures are the only hope for relief in such cases and we would advise that you take the matter up with a qualified local veterinarian.

FEEDING RYE STRAW—Will rye straw fed to pregnant mares and cows cause them to slip their colts or calves? One of my neighbors told me so, and today, September 30, my Percheron mare lost her colt. She was bred in June. She had a nice mare colt in the spring. She has been in the team every day that it was fit for a horse to be out; finished seeding September 29; did not work her the 30th, but at noon, when I went to water her saw what was wrong; she cleaned herself all right and seems to be all right in every way. Don't you think I had better let her run over until next spring before I breed her? In regard to the cows, we only have one that I am sure is with calf; the others have been in heat every 18 days. I have my own bull and he has proven to be a very sure breeder. Can you tell me what is wrong?—Ohio Subscriber.

REPLY—We see no reason why rye straw should cause abortion, providing it is free from ergot. Rye straw, however, is not sufficiently nutritious to serve as an entire coarse ration and should only be fed as a part of feed. This statement is pretty nearly true of nearly all threshed grains for the reason that in the maturing of the grain the greater part of the nutrition leaves the straw. If animals are required to largely subsist upon provender of this nature there is nearly always apt to be digestive trouble and other distrubances result.

CHRONIC NAVEL ILL—My neighbor has a colt that was born in May; six weeks after he was born he was found to be lame in stifle; parts very warm. He was treated for some time by bathing and applying liniment, followed by two bottles of Kendall's Spavin Cure, also two or three dollars' worth of Absorbine. He has been looked after better than the general run of these cases. The swelling on stifle is on side and about what you could cover with two hands. The other stifle is swollen the same way and is nearly as large but has never been much sore, but it is as lame on the one side today as he ever was and never gets any better. He ran in a lane after he was born, where the ground was very hard, and soon after birth he developed a small bursal enlargement on the front side of stifle, but it never was sore and I don't think it has any connection with the trouble in other part of stifle. What will be the probable outcome of this case? Could it be possible that this case could be traced to navel ill, and if so, would bacterin be of use at this time? This makes the case three and a half to four months old and as much lameness as at any time.—Michigan Subscriber.

REPLY—It is a question as to whether or not this colt is going to respond to medical treatment and we are inclined to not look with much favor upon his recovery to a point where it will grow into a serviceable animal. Youth is in its favor and there is quite a tendency for young animals to grow out of these difficulties. The occasional application of some stimulating preparation such as you are using, together with care that will maintain thrift, will be as helpful as anything you can do at this time. Bacterin should be administered about every ten days.

HEAVES—I have a valuable mare that has the heaves and I think she is safe in foal. Can they be cured, and would it injure the colt to try to cure her? Do you think a mare will continue getting in foal and bring colts when she has the heaves?—Oklahoma Subscriber.

REPLY—As to whether or not an animal can be cured of heaves depends on the length of time the animal has been affected as well as the severity of the affection, and whether or not one is able to properly regulate the food supply. A laxative diet is in order in these cases so that a run at grass is ideal. In the absence of grass such animals are benefited by giving about four ounces of raw linseed oil in the feed once a day. Begin, of course, with small doses and gradually increase up to the amount. Such animals must be restricted on the amount of hay. Bright, fine, upland prairie hay is best and should be given in about one-half feed only. The flesh is to be maintained by a more generous grain diet; oats, bran and oil meal serve best. The animal should be watered before feeding. Avoid bulk in the stomach always. Give a tablespoonful of Fowlers solution mixed with the grain' ration, three times a day.

UNTHRIFTY MARES—I have two mares four and five years old which are out of condition; have lost flesh ever since I weaned their colts some five or six weeks ago. Their bags dried up nicely; their appetites are good and they do not seem to tire easily when at work. They throw off just a little urine every once in a while just like mares in heat; urine is of a good color. They are not in heat as I have tried them a number of times. I keep horse and jack in the barn all the time. I work them moderately and feed them well on ear corn or corn chop mixed with bran, or wheat chop and good prairie hay; salt regularly and they have all the good water they can drink. My horses usually look sleek and fat and well cared for. —Kansas Subscriber.

REPLY—You must keep in mind that the past summer has been a very trying one on all classes of stock, and where mares of the age you mention are required to nurse colts and perform the usual work of the farm, the results are often as experienced by you. A decided effort should be made to get these animals into a more thrifty state before the approach of winter, and they should be discontinued from work and given a run at grass with regular rations of grain. Oats and oil meal could be added, with benefit, to the grain ration, and bright alfalfa hay is excellent for such stock. A tonic powder consisting of the following given in the grain three times a day will aid: Powdered gentian, 8 ounces; nux vomica, 3 ounces, and dried sulphate of iron, 3 ounces. Mix all together and give a level table-

PERCHERONS

Prices That Will Profit Early Buyers on Both Stallions and Mares.

The mares range in age from weanlings to aged mares, and the stallions from weanlings to 3-year olds past.

I have been in the business a long time and on account of not being able to get competent help am compelled to close out. If sold in a bunch I will make the price right.

GEORGE HIRSCHMAN, Pierson, Iowa

WHITEOAK STOCK FARM

American bred Percheron Stallions and Mares.

The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to D. Augstin, Carlock, Ill. R. F. D. No. 2.

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Illinois.

IMPORTED BELGIAN STALLION

For sale; 9 years old; a sure foal getter; easy to handle. Have not time for the business. Cost $1,500 less than two years ago. Will sell at bargain price of $750. Parties met at train.

E. D. CHENEY,
Hillsdale, Mich. Route 4.

AND ONE JACK.

Stallions, mares and colts. All of desirable ages. Prices from $250 up. The right kind. Come and see them. The jack is black with light points.

H. M. STEPHENS, Munden, Kas.

REGISTERED BELGIAN STALLION

For sale. Heavy bone and extra quality; age, 2 years and five months; weight 1980, will make 2200 when matured. Also mare colt, age 15 months; weight 1300. Both by imported sire and dam; both bay color. Anyone interested will be convinced when they see them; they are as represented. Priced very reasonable.

G. S. VOLLMER,
Edon, Williams County, Ohio. Route 2.

FOR QUICK SALE.

One registered Percheron stallion; coming 3 in the spring. A large, muscular and heavy boned horse, will make a ton horse at maturity. Also a fine yearling of same breed. Will sell either or both. Parties interested should write or come at once as this ad will not appear again.

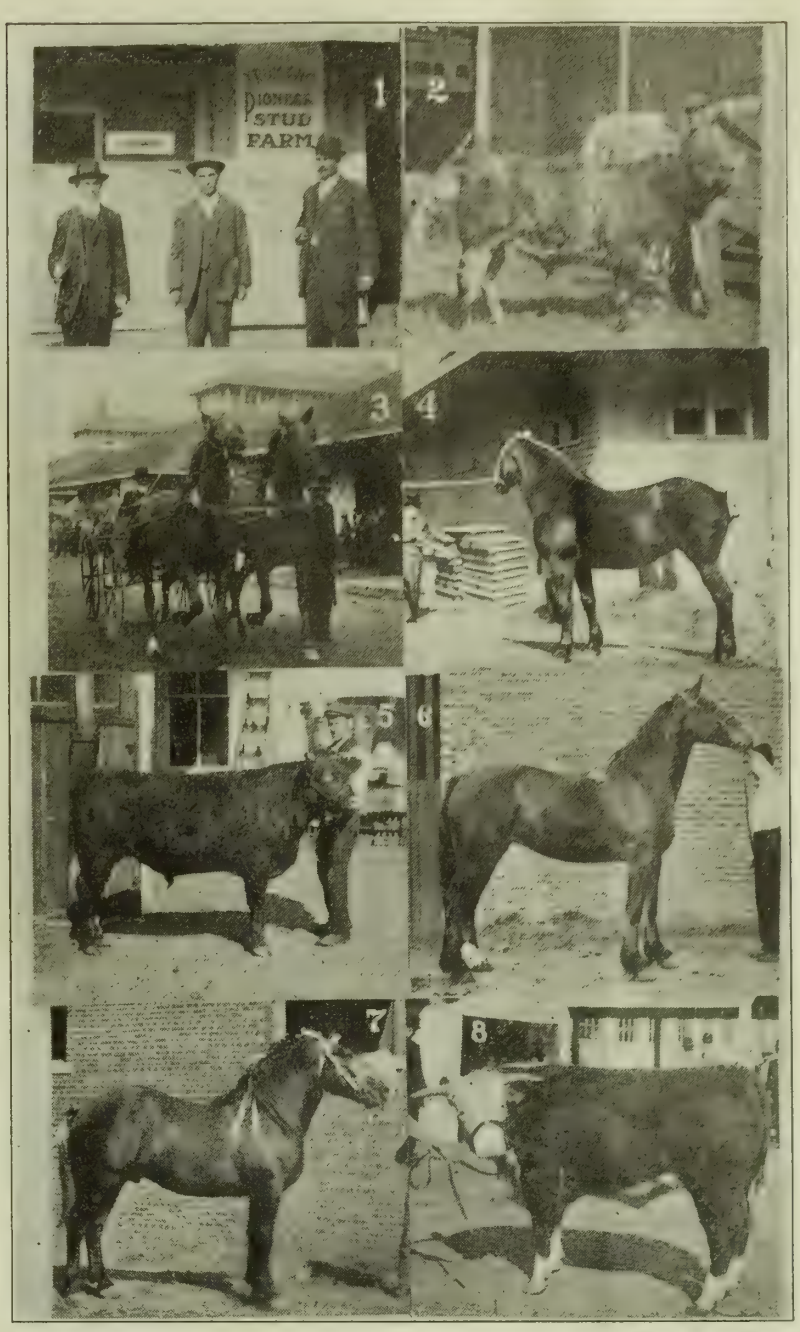
H. O. WARD, Wharton, Ohio. R. R. 1.

WILCOX STOCK FARM.

We have some extra good young Percheron stallions and mares for sale. They are all blacks and dark greys, with plenty of bone, size and quality. All mares are in foal by a prize winner at Springfield and Chicago in 1912. Can please the most critical buyer at reasonable prices. Write me your wants.

ENOS STEWART, Lexington, Ill. Rte. 3.

SCIENTIFIC BREEDING SCHOOL.



During the breeding season, when every good stallion is crowded to the limit, a little knowledge would be very valuable, especially when a doubtful mare is presented. If that particular mare should harbor the germs which causes other mares to be barren the breeder will be very thankful to know to what class that mare belongs. It is not merely the loss of that particular mare or a particular service that concerns him, but such mares usually require three or more services through the season. They are very expensive; they come at just such a time that the breeder does not want them, because there are good, clean, healthy mares that could be bred and from which one natural service might produce a living foal.

If there are 20 of these mares for each stallion that means 60 or more services, as a rule, of a very doubtful nature. If these 60 services could be used on clean, healthy, producing mares, every one must agree that they would be more profitable. The individual who employs natural service only is more in need of this saving than those who employ the capsule services, as he must make every service count. He cannot afford to lose 60 services during the very busiest part of the breeding season. If these breeders knew in just what class each particular mare belonged, it is quite probable that their business would be very successful. Aside from that his service to the public would be much more valuable.

Some breeders contend that they do not have time to attend a breeding school as it would require a whole week away from home. Would it not be profitable to spend one week at a time when the breeder is not very busy and save several weeks during the busy time, and practically double the income from the sire without increasing the investment?

The very best test as to the value of this school is that hundreds of the best breeders in this country have attended this school and put this information into practice with good results. They have not all been perfect, of course, but it is quite safe to say that every single one of them has been benefitted. We have never heard of one saying that the school was not satisfactory. Some have attended through curiosity, others for the purpose of teaching the instructors something. But practically every man has gone home satisfied. A vast majority of them have doubled their incomes without increasing their investment; nearly every one of them has increased his per cent of foals.

The cattle breeding school will be held from November 10 to 15 inclusive—six days and nights. This will probably be the only term in cattle breeding until next fall. The horse breeding school will be held from November 17 to 22 inclusive—six days and nights, although another term in horse breeding will probably be held some time during the winter months. Those who are in position to do so should attend the November school. One tuition admits the student to both schools. The courses are separate. It is not necessary to graduate in both of them to get a diploma; a separate diploma will be issued for each school. —Adv.

"POINTS OF INTEREST" AT THE SEASON'S CLOSING SHOWS.
1—John Truman, C. C. Williams and J. E. McWherter at Springfield. 2—At the "Royal"—C. A. Saunders' junior champion Shorthorn bull. 3—Springfield—Standardbreds of carriage size and style. 4—Springfield—Dan Augstin's first prize Percheron yearling filly. 5—Kansas City—E. M. Hall's champion grade Shorthorn steer. 6—Kansas City—F. L. Crosby's first prize two-year-old Clyde fillly. 7—Kansas City—J. D. DeTar's two-year-old home bred Percheron. 8—Kansas City—R. H. Hazlett's first prize yearling Hereford steer, Record.

CLIPPING THE HORSE.

To the American Breeder: The subject of clipping the horse is a matter of considerable discussion at this time of the year. The following suggestions may be of benefit to those who are contemplating clipping their horses: In the first place, never clip a horse that has a fine coat of hair, as it will then be necessary to clip it every spring and fall thereafter. The only horses that should be clipped are those with heavy coats that can be cared for during the winter, such as blanketing warmly in the stable and covering with a canvas sheet during severe storms while at work. The advantage in clipping a horse is that the long haired horse, after sweating profusely, will not dry off during the night. This condition will cause the horse to take cold, the inflammation being located in the nose, throat or lungs. It would not be a good policy to clip a horse and then turn it out to a straw pile for the winter. Clipped horses should never be allowed to stand uncovered, as they chill quickly. A clipped horse dries off readily, mud is easily removed from the legs and there is no disagreeable hair flying during the period of shedding. In the fall clip as soon as the flies do not bite the animal, while in the spring clip before the horse begins to shed.—C. H. Barnes, Colorado Agricultural College.

SOLD TOO MANY HORSES PRIVATELY.

The fall selling of draft stallions has been better than usual. Several exhibitors at the early fairs cut short their intended circuit of shows because of early sales made from among their best stallions. For this reason also, some of the fall and early winter public sales are called off. We have just received a letter from Chas. Irvine, of Polk County, Iowa, in which he says:

"I have sold so many horses the past few days that it will be impos-

REGISTERED PERCHERON STALLION
For sale. Black; 7 years; weight 1600; sure breeder of good colts. Broke to drive single; not afraid of autos. Best of feet; travel him without shoes; gentle. Certificate of soundness. Lots of colts to show. With good luck will more than pay for himself in one season. Quitting business. Price $425. This ad appears but once.
A. R. BARR, Webster City, Ia. Rte. 6.

IMPORTED AND HOME BRED STALLIONS AND MARES.
PERCHERONS, BELGIANS, SHIRES.
The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. **Address Hart Bros., Osceola, Iowa.**

PERCHERONS, BELGIANS AND GERMAN COACH MARES AND STALLIONS
of all ages for sale. I have recently taken over the entire stock of horses formerly owned by the firm of Ives & Bellman and can furnish patrons with first-class breeding stock of the foregoing breeds. Have a fine lot of last spring's and yearling colts, as well as mature stock to select from. Address, **WILL BELLMAN, R. 1, DELAVAN, WIS.**

STALLIONS AND JACKS
For sale. Age and health makes it necessary.
One imported German Coach stallion; one black Percheron stallion; one good jack coming four; one extra fine jack coming three. All sound and in fine condition. Will send pictures and full description. The youngest jack (in my judgment) is worth one-half what I ask for the four head if taken in a bunch.
Write me. I will answer and name you a bargain.

CLOSING OUT SALE.
Two imported Belgian stallions, 6 years old; bay; 2000 and 2100 pounds; one imported Percheron stallion, 11 years old; black. One home bred Percheron stallion 2 years old; black-grey. Also some registered fillies. These horses are all sound and priced to sell.
HATTEBERG BROS., R. 4, Paxton, Ill.

DOLLARS THAT GREW AND GREW.

Good judgment makes men rich, buys studs FROM A FARMER, pays no town-barn expenses, no salesmen commission. My big bunch registered Percheron studs, weanlings to 4 years; have bone and weight with any of them; cost you half as much but make you twice the money. Good judgment buys early. Fast trains.
FRED CHANDLER,
Route 7, Chariton, Iowa.

WE SHIP C. O. D. AND PAY EXPRESS CHARGES.

Big-type Chester White boars, Sweepstake 28006, weigh-1260 pounds (first and champion boar at Iowa, 1912), and Jumbo 14035, weighing 1210 pounds. Both died in our possession and we have their breeding in our herd. Big catalog free. Will hold a bred sow sale February 10, 1914. Write, **B. M. BOYER & SONS, FARMINGTON, IOWA.**

MARMION'S BIG POLAND CHINAS.

I can furnish you with as good a pig as can be found in the corn belt. Pigs sired by five of the best boars of the breed. Some by one of the good sons of Rood's Giant and out of a Long King sow. Also a litter by Big Knox.

B. F. MARMION,
Farmington, Iowa. R. F. D. No. 2.

GOOD SHORTHORNS.

Practical cattle for both beef and milk. Just the kind the farms of the country need, and with breeding and conformation to make show cattle if you want them. I show my breeding stock successfully, but no stock is ever crowded enough to hurt it.

Pleased to show stock, quote prices and answer inquiries at all times.

C. H. White, Burlington, Kas.

BREEDING STOCK AND LAND FOR SALE.

One registered Percheron stallion; color dark brown; 9 years old; weight 1900 pounds. Good heavy bone and a real draft horse. Registered in Percheron Society of America. Also one black Mammoth jack: 8 years old; mealy marked jack: 14 hands standard and good bone; active and works as quick as anybody's stallion. One of the few that works on the range. Both of these are good; sure breeders with plenty of colts to show.

Also my property consisting of three acres in good town of 400 population; good country surrounding it with good breeding business already established. Good house, barn and outbuildings; fenced and in good condition. Three good drilled wells with fruit and garden. Will sell together or separate, or trade for good young horses, mules or cattle, or land, as I am quitting the business.

C. E. HODGDEN,
Galesburg, Neosho County, Kansas.

900-ACRE RANCH

For sale; 400 acres meadow under irrigation, system complete; water inexhaustible; balance crop and pasture land; fine spring and coal mine; 7 miles from county seat. Also 200-acre ranch for sale.

FOREST RICE, Blaisdell, No. Dak.

Make Money With Poultry

AMERICAN POULTRY is a magazine devoted entirely to helping earnest men and women make a finincial success of poultry raising. Its staff of writers is composed entirely of those who have made a practical, instead of theoretical, success of poultry farming, and who are glad to pass on the results of their hard earned experience to AMERICAN POULTRY readers.

There are many pit-falls in the path of the novice which may be entirely avoided by those who will follow the teachings set forth in this magazine. It fully explains how to make a start, how to construct houses, coops, and other devices, how to get a large egg yield, how to cure and prevent disease, how to exhibit, how to get the top price for eggs, how to use incubators and hundreds of other points which everyone wishes to know. It explains the famous secret system through which poultrymen have become rich and afterwards sold for hundreds of dollars.

AMERICAN POULTRY is a large, handsomely illustrated, monthly journal, well printed on fine paper, and should be found on file in the home of every poultry lover. No beginner in the poultry business should think of being without it. It will save him many times the small subscription price. The advanced poultryman will also find it of great value; the articles being varied in their scope.

SPECIAL OFFER. The regular price of AMERICAN POULTRY is 50c per year, but in order to introduce it to several thousand new readers, we will, for a short time, give a 200-page poultry book, which is a complete guide in the poultry business, ABSOLUTELY free to everyone sending 50c for a yearly subscription, or $1.00 for a three year subscription to AMERICAN POULTRY. A trial six months' subscription (without book) will be sent for 25c. Never has so much been offered for so small a sum. Advantage of this offer should be taken at once.

AMERICAN POULTRY

sible for me to make a public sale on December 15, the date I had claimed. Please make a note of the postponement of the sale."

EVERLY & SLOAN'S PRIZE MULES AT THE "ROYAL."

1—First prize sucking mule, sold for $250. 2—First prize yearling, 1250 pounds, sold for $550. 3—Second prize yearling. 4—Third prize yearling. 5 and 6—First and third prize two year olds, sold for $800.

RECORD BREAKING MULE SHOW AND RECORD PRICES.

Among the most notable incidents of the most noteworthy exhibitions of mules ever held at the American Royal Live Stock Show was included the selling of several mules at record prices. By far the heaviest buying was done by W. R. Crackel of Vincennes, Ind. Mr. Crackel who was out to buy the best things in mule flesh which the country affords, was at the Missouri State Fair and there met Superintendent Elgin of the American Royal mule show. It was on Mr. Elgin's assurance that he would find at Kansas City the best mules he ever saw, that Mr. Crackel came here instead of going to St. Louis and Springfield as he had planned.

That he found mules "up to advance notices" is amply proven by his own purchases. He took the team of three-year-olds shown by J. H. Swofford of Polo, Mo., for $1,000; he took the first and third prize two-year-olds shown by Everly & Sloan of Coffey, Mo., at $800 for the pair, and he took the first prize yearling shown by the same firm at $550. For four other yearlings he paid Everly & Sloan $1,-150; for another yearling he paid Miles & Son of Norborne, Mo., $300, making $3,800 which Mr. Crackel paid for ten head of mules shown at the American Royal.

Other buyers of prize winning mules at this show were J. C. Irvin of Marshall, Mo., and O. Harris of Harris, Mo. Mr. Irvin, among his purchases, paid Everly & Sloan $250 for the first prize suckling mule. Mr. Harris bought the fourth prize team of aged mules from Wm. Motherhead of Parkville, Mo., at a price we did not learn.

It is stated that in at least three instances the prices we have named were record breakers. Superintendent Elgin has the distinction of having made (at the Louisiana Purchase Exposition at St. Louis) the greatest showing of mules ever made by one exhibitor, and Mr. Elgin states that the ring of 13 yearlings shown at the American Royal is the best ring of yearling mules ever shown anywhere, and that it was headed by probably the best mule ever shown. This is the yearling which sold for $550 and which weighed 1,250 pounds.

QUESTIONS AND ANSWERS.

(Continued from page 12.)

spoonful at each meal, stirring well with the feed.

ABSCESS OF THE POLL—I have a mare with a lump back of her ear and it looks very much like poll evil. It has not broken yet and is not tender. Could you please give me a cure for poll evil? Would you advise me to treat her before the lump breaks or wait until after? I live over 100 miles from a veterinarian.—Montana Subscriber.

REPLY—It appears that your mare is threatened with an abscess at the

BLACK JACK, MEALY POINTS.

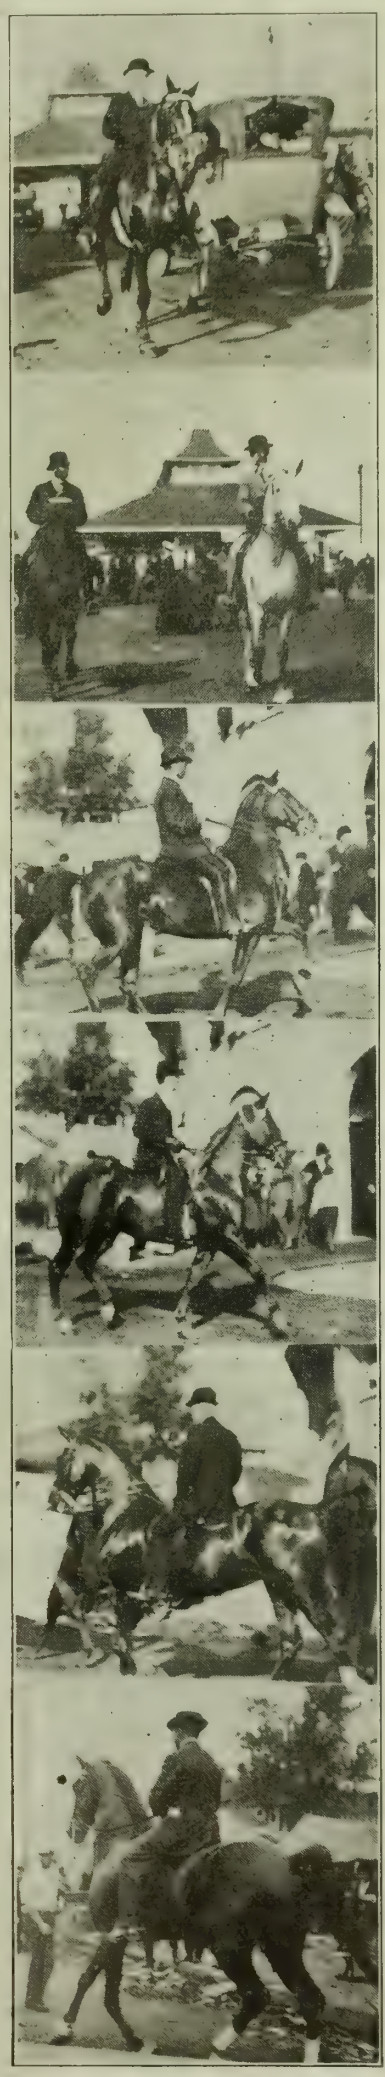
Vandalia, Fayette County, Ill. Rte. 3.



EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. **W. H. Fulcomer, Belleville, Republic County, Kansas.**

poll, which may, if not checked, result in so-called poll evil. At this time we would recommend that a blistering agent be applied. Clip the hair from the parts and thoroughly rub in the following: Powdered cantharides, 1 ounce; lard, 4 ounces. Mix together and apply by rubbing in well with the hand. Tie the animal up for twenty-four hours, at the end of which time wash the parts off with warm water and soap. When dry apply a little lard once a day for a few days. If improvement is shown, repeat the blister in from two to three weeks.

CHRONIC INDIGESTION—I have a fine "Kentucky Whip" horse that has been having sick spells; he has been having them every three weeks but they keep coming oftener. He kicks up and steps back and forth with his hind feet out; lies down once in a while and throws his nose around to his side. He seems to be going down all the time and is rather sleepy headed. He is a Thoroughbred. Would be very glad for some information on this horse.—Colorado Subscriber.

REPLY—It is quite likely that your animal is affected with some stomach disorder, giving rise to indigestion. It is important that the food be fine, nutritious and easily digested. At least a part of his ration should consist of oil meal, crushed oats, wheat middlings, etc. Give a rounded teaspoonful of powdered golden seal in his feed morning and nights and a tablespoonful of Fowlers solution in the midday meal. Feed and water regularly.

ILLINOIS STATE FAIR SADDLERS.

LAMINITIS—I have had three cows that got too many oats when threshing. One of these cows has already died and the others are all stiff and about dead. What can I do for them and what should I have done at first? —Iowa Subscriber.

REPLY—It is quite likely that your cows were foundered and it will be difficult to afford much relief at this time on account of the tendency of the disease to become chronic. It is in order to bind several layers of woolen cloths on the feet and saturate them several times a day with ice water. This will aid in reducing the inflammation in the parts and in that way lessen the severity of the trouble.

WHO WILL ANSWER THIS?

To the American Breeder: A and B plan to form a partnership in farming and hog raising. A owns land, horses, machinery, seed and feed enough for one year, and the breeding stock. B is to do all the work and have 150 acres of cultivated land and the pigs under his management.

They aim to raise oats, corn and barley for seed and feed, and winter rye, rape and clover or alfalfa for pasture.

What would be a fair division of profits?

Would it be better if B purchase horses and machinery from A and pay for same out of future profits? If so, how should profits be divided in that case?—J. T. Weaver, McKenzie county, N. D.

Now is the time—

to make a trip to Texas and see just where *your* opportunity lies.

The price of good, rich land in Texas is so low that you can own a big farm there without investing much money or mortgaging the place. The land will raise as big or bigger crops than you are now raising, and you will get better prices for what you raise.

Ask your local agent to sell you a ticket via the Katy—or tell me where you want to go and I'll plan your trip, and give you full information about the *low homeseeker's excursion fares* on the first and third Tuesdays of each month.

I will also send you our free books on Texas opportunities if you want them. Write today.

Maxwell Motor Cars

We make them better—sell them for less—that's why they're leaders!

Maxwell Motor Cars are made by an organization composed of men who have been prominent in the automobile industry from the beginning. These men know how a car should be built—and how it must be built to satisfy the present day critical buyer.

And it was with this ideal in view that these Maxwell Models were built. Each one was designed to be—and has proven by comparison that it is the leader of its class.

This means that no matter what Maxwell Car you buy you are absolutely sure of getting the most for the amount of money you wish to invest.

We built the cars first—made absolutely sure that they were right in every way—then we figured on the price. And how closely we figured these prices is shown when you compare the cars with others.

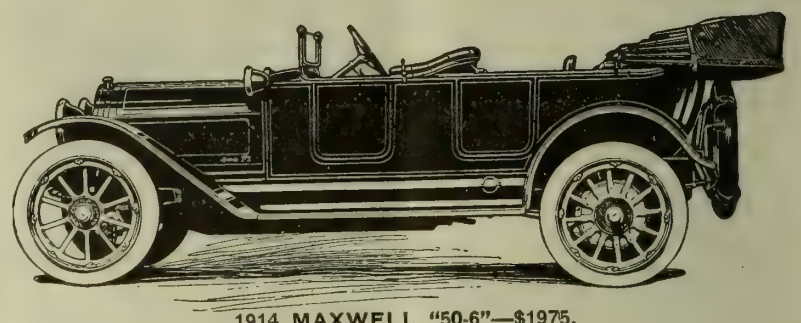
Our competitors say that we cannot produce these cars at the prices and still make a fair profit. They say that we are hurting their business by claiming something which we cannot do. "But we should worry."

All we have to say on this matter of profits is that we ARE making a profit—and we'll leave it to you to decide how much they are making.

We prefer to cut down the profit for each car and sell more cars. This is just the same to us—means more manufacturing, but we like that—though it is far different from your standpoint. You can see how we save money for you. And there is where the rub with the competitors comes in—they haven't the facilities for making cars in such large quantities.

Now a word about the cars themselves.

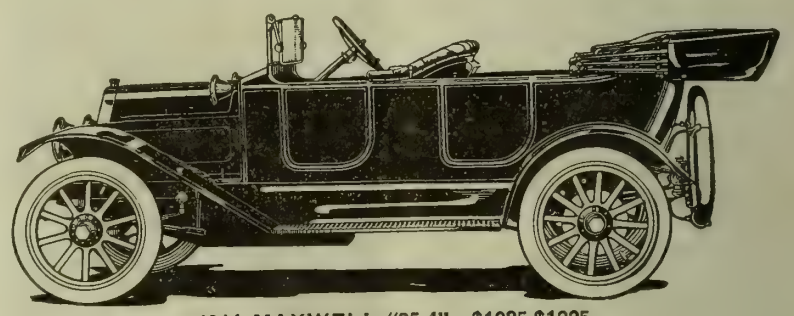
The Maxwell 50-6 is for the man who wants the utmost in luxury and yet wants to pay a fair price for the amount that can be embodied in a motor car. Owners of this car say it is "the sweetest thing on wheels."



The Maxwell 35-4 is the medium priced car of our line. You'll find many features in this car that are not ordinarily found in a car selling for less than $2,000.

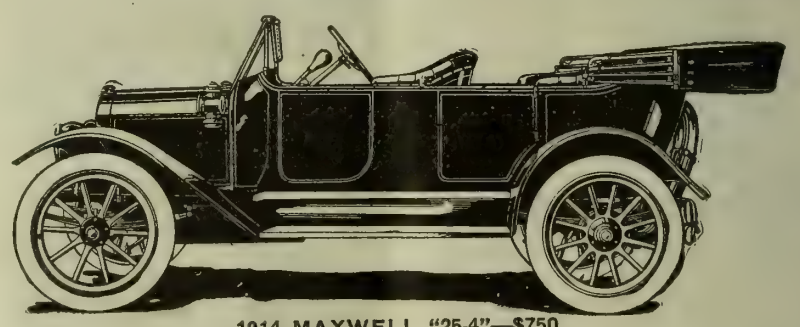
And the Maxwell 25-4 is for the great mass of buyers who must count their money—yet do not want to advertise the fact that they are economical. It costs a little more—but is a whole lot better.

Remember, also, that when you buy a Maxwell car you have a product that is backed by a $37,000,000 concern.



Buying a Maxwell means getting the best for the amount of money you want to invest. Get in touch with our agent—he'll gladly show you the complete line—and he'll give you some new ideas in regard to motor car values.

Write us for catalog.



1914 MAXWELL "50-6"—$1975.

The sweetest running thing on wheels. Six-cylinder motor, bloc-cast, 50 h. p. 130-inch wheel base; electric starter and lights; Bruce Otts body; 5-7 passengers; disappearing seats; 36x4½ inch tires all 'round. Luxuriously finished, long, easy riding springs and full equipment, including ventilating windshield, top and Jiffy curtains—even an electric cigar lighter. Left or right side drive optional.

1914 MAXWELL "35-4"—$1085-$1225.

Powerful, silent, sweet running; bloc-cast 4-cylinder motor; 111-inch wheel base; 33x4-inch tires all 'round. Left hand drive, center control. Electric starter and lights, at $1225. Three-quarter elloptic springs. Bruce Ott body, ventilating windshield and full equipment, including Jiffy curtains.

1914 MAXWELL "25-4"—$750.

The year's sensation. Four-cylinder, bloc-cast; 25 h. p. motor; magneto; weight 1600 pounds; 103-inch wheel base; 30x3½-inch tires all 'round; 3 speed selective transmission; full five-passenger body designed by Bruce Ott; complete equipment, including tire holders, ventilating windshield; top, Jiffy curtains.

VOLUME 6. KANSAS CITY, NOVEMBER 5, 1913. NUMBER 20.

The $2,900 Saddle Horse Stake

The Epoch Making Feature In the Show History of Fine Horses, Which the Missouri State Fair Successfully Inaugurated. Famous Entries Briefly Described.

Written for the American Breeder,
By Prof. E. A. Trowbridge, Missouri College of Agriculture.

The $2,900 guaranteed saddle stake was the most significant event of the most successful Missouri State fair ever held. It was peculiarly fitting that an event of such importance should be staged at the 1913 Missouri State Fair. It marks an epoch in the saddle horse industry of Missouri. It proves beyond a doubt that such an event can be made a drawing card at a great state fair. It demonstrates that saddle horse exhibitors will support a clean, "open and above board" sportsmanlike competition for a big stake. It calls attention to the fact that the eyes of the pleasure loving horse public are not covered by sectional prejudice. It forces the inevitable conclusion that the American saddle horse is an idol of the American public and that mechanical devices may come and go, but the horse will remain supreme.

John T. Stinson, secretary of the Missouri State Fair, deserves the lion's share of credit for the successful staging of this stake. The idea was born in his mind some years before the event took place. The matter was discussed with his friends, some of whom hesitatingly agreed that it could be successfully executed; others of whom shook their heads in the negative. He proceeded cautiously, to ascertain from the horsemen their opinion upon the matter, and after having it well in hand placed it before the State Board of Agriculture, who control the Missouri State Fair. The board of agriculture agreed to the plan as Mr. Stinson had outlined it. The plan was as follows:

To offer a $2,500 saddle horse stake to be divided into ten moneys.

For Stallion, Mare or Gelding.

First premium	$475.00
Second premium	350.00
Third premium	300.00
Fourth premium	275.00
Fifth premium	250.00
Sixth premium	200.00
Seventh premium	175.00
Eighth premium	175.00
Ninth premium	150.00
Tenth premium	150.00

Conditions.

Two per cent of the stake entrance fee; five per cent of the stake collected from money winners; twelve entries required. All entry fees in addition to the twelve to be divided equally between the money winners.

Attention is called to the fact that the money prizes were distributed to the first ten winners. While there was an entry fee charge in this stake, yet over and above the twelve required entries the fees were divided equally between the ten money winners.

No stake has ever been held with so many prizes awarded as were given in this stake.

After the plan for the stake had been well organized, it was thoroughly advertised, Mr. Stinson having charge of this matter. Judges were selected long before the entries closed so that every man who desired to make an entry might know the names of the gentlemen who were to pass upon his exhibit. Men were selected to judge the stake whose reputation were above reproach; who were known to be absolutely honest and thoroughly capable. To the state fair management belongs credit for having selected men of such high caliber to perform this important task, and to these gentlemen themselves, the public, the exhibitors and the state fair management have but the warmest praise and deepest respect for their careful, intelligent and conscientious consideration of all entries in this stake.

Entries came to this stake from three different states, namely: Kentucky, Arkansas and Missouri. On the date of the closing of the entries, August 1, there were twenty entries paid up. On the day the stake was judged, Friday, October 3, nineteen horses paraded down the track in front of the ampitheater at the Missouri State Fair grounds.

ENTRIES IN THE $2900.00 SADDLE HORSE STAKE

Name of Horse.	Entered By	Owner.
Rex Moore	S. Y. Sanders, Warrensburg, Mo.	S. Y. Sanders.

Kymokan	Miss Loula Long, Kansas City	Miss Loula Long
Bourbon Prince	C. E. Dunlap, Fulton, Mo.	Coons & Dunlap
Sady Macey	Ball Bros., Versailles, Ky.	Ball Bros.
Miss Cliff	D. E. Holman, Mexico, Mo.	Estill & Son
The Intelligencer	Hook & Woods, Paris, Mo.	R. H. Cauthorn
Princess Eugenia	E. D. Moore, Mexico, Mo.	E. D. Moore
Queen of the Denmarks	E. D. Moore, Mexico, Mo.	E. D. Moore
Unnamed	Buckman Bros., Monroe City, Mo.	Buckman Bros.

The event was the most successful of its kind ever seen by the fair going public; the weather was ideal; the event was staged in front of the capacious ampitheater; the horses and riders were in the best of condition; the event had been properly advertised; an enormous crowd had congregated to witness it; the track was kept clear of spectators in order that the crowd might have the best possible view; it was scheduled to occur at 12:30 o'clock, and shortly after that time the horses entered the ring.

Only to those who were eye witnesses can the enthusiasm which greeted this wonderful array of American equine aristocrats, be known. Those who love a good horse followed the natural impulse and threw their hats in the air and yelled. Those people of the more conservative nature commented upon the money value of the horses; the ability of the riders and the importance of the event so far as Missouri and the saddle horses are concerned. To consider the action and the comment of those who saw this stake is to literally survey the horse business and all that has contributed to it since its inception, and which will make it until the end of time.

So far as the horses themselves are concerned, much may be said. The lasting importance, however, attaches to the event itself. It was the first of its kind ever held. No one had conceived until did the secretary of the Missouri State Fair, that such an event could be successfully carried to an end. Events of similar value and with similar horses may be held in the future. The enthusiasm may run as high, yet history marks down the "Twenty-Nine Hundred Dollar Guaranteed Stake" of the Missouri State Fair, 1913, as the first of its kind appears in the center of this page.

Nineteen of the twenty horses entered appeared in the event. The show lasted for more than two hours and during that time the various individuals performed at the various gaits and in varying moods. At some stages of the show it seemed that certain horses were strong contenders for the money. Within a short time the relative merits of the horses seemed to have changed and so with interest to the last and until the ribbons were tied, the public watched.

It must be remembered that the champions of America had come together in this event. Horses, which had been up to this time undefeated in their class and had also figured prominently in championship rings, were doomed to stay far down the line, yet no one shall attempt to say that is anything but the greatest credit to any horse to have even shown in such an event to say nothing of having succeeded in winning a part of the money.

The judges were Mr. Porter Taylor, Montgomery City, Mo.; Col. John T. Hughes, Lexington, Ky., and Mr. Stockton Fountain, Centralia, Mo. Mr. ever witnessed. A list of the entries T. J. Hedrick of Butler had charge of the light horses and Mr. J. A. Tuttle of DeSoto, Mo., was the superintendent. The ten prizes were awarded to the following, in the order in which the animals are listed:

Name of Horse.	Rider
Hazel Dawn	Shropshire
My Major Dare	John T. Hook
Astral King	Anderson
Sady Macey	Ball
Princess Eugenia	Moore
Maurine Fisher	McCoy
Gingerbread Man	John T. Woods
Queen of the Denmark	Russell
Miss Cliff	Holeman
Bob McDonald	
Maurine Fisher	McCoy

Hazel Dawn, the winner of the stake, has been undefeated so far this year. She made a wonderful show in this event. That her manners were good, her performance of the highest order, is evidenced by the field over which she won.

My Major Dare, second prize winner, is a stallion of exquisite conformation and finish, with excellent manners and action of the first order.

Astral King, the horse which stood third, is a chestnut stallion, larger than the two which stood ahead of him; phenomenal at his trot, excellent at his other gaits, possessing conformation of exceptional merit and a fairly well mannered horse.

Sady Macey, the mare owned by Ball Bros. of Versailles, Ky., is a chestnut mare possessing remarkable individuality, finish and personality, if you please to call it such, that distinguishes her from other horses. Her gaits, her manners and her conformation are all such that she stands in the first rank among our great saddle horses.

These four horses were shown together for a time, after which time they were stood aside and the other horses allowed to work. It is safe to say that no great mistake would have been made in tieing any one of these horses first, because they are all horses of extraordinary merit. The decision of the judges met the approval of the public and of men known to be good judges of horses.

Princess Eugenia, the mare which stood fifth, is only a 4-year-old mare. She is wonderfully attractive. She promises to even be a better mare next year than this, but her manners, her wonderful conformation and action entitles her to the place which she received in this stake.

Maurine Fisher, the mare which stood sixth, is a mare of the same age, and although of a little different stamp than Princess Eugenia, possesses much that is remarkable, and the appearance of these two mares will be watched for next year with keen interest.

Gingerbread Man, winner of seventh prize, is a horse that needs no introduction to the Missouri public. He has been champion time and again and never did he make a better showing than in the stake at the Missouri State Fair. His manners and performance are above reproach and it is only when the saddle is taken off that he may be criticized slightly for not having quite so much finish as some of the other horses. As a performer the Gingerbread Man is one of the most remarkable ever seen in the show ring.

The other three horses which competed were all horses of high merit and those horses which stood behind the money were horses which have been well up in their classes this year.

It must be said in conclusion that it was a battle royal and was fought out honorably and "to the finish." The exhibitors were gentlemen, and the horses were shown as gentlemen show their horses. The awards were accepted and the event has gone down in history as the greatest of its kind. As optimists, we may say that the horse business is better for this event. It has given us confidence in the business; it has called the attention of the world more markedly to the saddle horse interests, and it has made history of the most romantic nature for future generations.

FAMOUS SADDLE STALLION SERIOUSLY SICK.

To the American Breeder: I have been receiving numerous letters, telegrams and telephone communications in reference to the death of Astral King. I do not know how the report could have gotten out, but I have seen it in some papers. I am very glad to state to you that Astral King is not dead. He has been a very sick horse, and for five days was completely out of his head, and continually trying to kill himself, apparently, by throwing himself against the stall, when he could get an opportunity to do so. Of course we protected him as much as possible. For the past four or five days he has been getting better, and yesterday I received a letter from Dr. E. M. Hendy, our local veterinarian, who has been with the horse for ten days, and in that letter he said to me that the horse would completely recover. But this morning I got another report and he says there is a slight indication of nervousness again. However, we are all hoping for the best, and I am hoping that I can get the horse home, and if I do get him home again the time when he goes out to show or to make exhibitions will be when weather conditions and everything else is right. However, weather had little to do with this trouble, as it is something that has been working on the horse, we know now, for several months, although we did not realize it until it developed into a serious condition. The horse only had a slight touch of pneumonia, but the main trouble was a very high fever and some other trouble which we have not completely diagnosed up to this time. Of course if he recovers it will be impossible for him to make any more shows this year, and I doubt if I would feel like taking the chance of a relapse even if I felt he was able, for the risk is too great with one of his kind.—Jas. A. Houchin, Cole County, Mo.

AN ANSWER ON PARTNERSHIP FARMING.

To the American Breeder:—In answer to the partnership farming article on page 15 of the October 20 issue. Let A invoice his stock, machinery and feed at the market value, then let B pay a fair and reasonable rate of interest on one-half of the amount. B is to do all labor or to pay for all labor done and keep up general repairs such as repairing fences, outbuildings, etc. A to furnish all material. Let general expenses be shared equally, such as repairs to farm, implements, purchase of new machinery, stock, horse shoeing, buying of feed and all incidentals of a like nature.

Put all money in bank as soon as taken in and check out all bills at the end of month your cancelled checks show how money was spent. Have a settlement at the end of every month.

All increase of stock is equally owned by A and B. Have a clause in your contract that if either party wishes to dissolve the partnership at the end of year, if they cannot agree to terms, that either party can demand a public auction sale. This plan gives B interest in all the stock, therefore, he will give all the stock more personal attention than if A owned a part of the stock individually, and B likewise.—M. O. Gordon, Wapello County, Iowa.

TENNESSEE JACK RECORDS BURNED.

Notice has been sent out as follows: "We have had a very disastrous fire which destroyed our records; heat and water burst the safe and everything is lost." This is from the Jack Stock Stud Book in Tennessee.

The Standard Jack & Jennet Registry of America at its last meeting passed a resolution to the effect that those holding stock in the Jack Stock Stud Book could surrender their certificates to the Standard Jack & Jennet Registry and have the privilege of registering their stock at the regular membership fee, which is one-half the amount charged non-members. The resolution also provided that those having animals registered in the Jack Stock Stud Book can surrender their registry certificates to the Standard Jack & Jennet Registry of America and have those animals registered in the Standard record free of charge, provided they fill the requirements of the Standard Jack & Jennet Registry.

Another resolution which interests every jack and jennet owner provided for a change in the requirements of the Standard Association to take effect in the next few months, which will disqualify a lot of animals from ever being registered in that association. Every one who expects to have their stock registered under the present rules should do so soon. There are thousands of good animals that should be registered and we wish to notify every one in plenty of time so that there will not be any complaint when these rules change.

Right now is an excellent time to attend to this important matter. Write to William E. Morton, secretary, 920 Scarritt building; Kansas City, Mo., for application blanks.

LYE FOR HOGS.

To the American Breeder:—We have frequent inquiries concerning the desirability of lye or other very strong alkali for worms in hogs. Treatment for worms in hogs, just as in other animals, must depend upon the kind of worms, location in the intestines, and condition of the hog. Lye is not desirable as a general treatment.—M. H. Reynolds, Veterinarian, University Farm, St. Paul.

Questions and Answers.

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problms of on reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

566—GESTATION QUESTION—Will a colt turn in the mare at five months along? And does it make the mare sick?—Idaho Subscriber.

REPLY—The fetus changes position, as a rule, at a later period than the one mentioned, and in some mares causes pains resembling colic.

567—INFLAMED EYE—Last summer my mare's eye began to run a watery fluid about one week; running stopped and I thought mare's eye was all right, but last week it started again to run water and matter. The running lasted only 24 hours and mare's eye looked clear the next day, but on close examination I found a dark film about as big as a dime just above pupil. Eye has not swollen or sunken in. She is in good shape; five years old. No veterinarian inside of 50 miles.—North Dakota Subscriber.

REPLY—Whenever your mare's eye begins to show weakness, place her in a dark stall and bathe the eye for 30 minutes with very cold water, three times a day. Follow this by placing several drops of a saturated solution of baracic acid in the eye.

568—COWS FAIL TO BREED—Three years ago I bought a cow that had lost her calf the year before; I also got a two year old heifer of her's that was in calf and which she lost when about six months along. Now I could not get either of them to breed after that and have bought several that carried their calves full time, but could not get them to settle again. I have a fine heifer that I have bred three times with no results. I bought three cows this spring that had their calves all right, but for all I have used four different bulls, have not got one with calf. Please tell me what the trouble is and give me a remedy.—Ohio Subscriber.

REPLY—We suspect you have plenty of contagious abortion in your locality and the chances are that most of the males are affected which makes a very favorable condition for the general dissemination of the disease.

569—CHRONIC METRITIS—I have a neighbor that brought a nice six year old mare to my place to breed. He bought her this summer and he says that about every two months one side of her bag will swell up and break; after it breaks it will begin to gradually fill up again and in a couple of months break again. Is there anything he can do to stop it, and what do you think about breeding her? It has been two years since she brought a colt.—Kansas Subscriber.

REPLY—It is a bad practice to breed a mare so affected for the reason that she is very apt to have grave disturbances at foaling time, and besides there is danger of losing the foal from either character of or insufficiency of milk flow. About the only thing that relieves these cases is a surgical operation, done with a view of dissecting away the diseased udder.

570—TOE CRACK—I have a horse whose fore feet crack (so far only one foot). It starts in center of hoof and in time will run to the crown of hoof. Something similar to what is called "sand crack." Could you tell me what to apply to the hoof to soften it to stop it from cracking?—Wisconsin Subscriber.

REPLY—Shoe the foot with a bar shoe, cutting away the support immediately at the point of the crack. There should be no trouble in overcoming the difficulty if this treatment is persisted in for a time. Keep the feet soft by letting the animal stand in a little mud occasionally, washing off the feet after each time and when dry apply a little vaseline to prevent evaporation.

571—THUMPS—Could you prescribe anything for what is called "thumps" in horses?—Wisconsin Subscriber.

REPLY—Thumps usually is a result of overwork and exhaustion and the remedy lies in prevention.

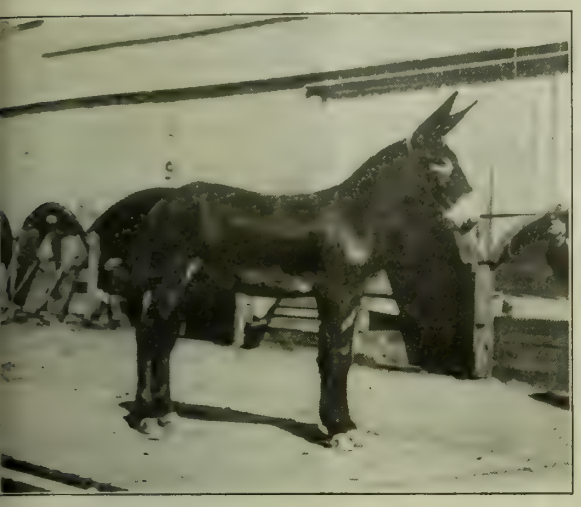
572—SORES ON LEGS—I feed my stallion two gallons of oats a day, prairie hay twice and one feed of alfalfa. He is starting to get sore in his hind fetlocks, which are somewhat swollen. It is scratched, I guess. Could you give me some powder or salve that would help He has the run of a small lot.—Nebraska Subscriber.

REPLY—You do not tell us how much your stallion weighs so we are in no position to judge whether or not you are giving him too much grain. Be careful that he is not kept in too high a state of flesh, and that his stall and lot are both kept clean. It is just as important to keep the lot free from manure as the stall in these cases. Apply the following to the wounds three times a day: Sulphate of zinc, eight drams, acetate of lead, two ounces, water to make one quart. Shake well and apply to the parts not less than three times a day.

573—HEAVES—I have a fine driving mare that has the heaves; has had them for some time. Is there any cure for that trouble?—Colorado Subscriber.

REPLY—Chronic heaves is a very difficult affection to cure. The average individual will not give such patients the time and care necessary to improve their condition in almost any stage or form of heaves so that advice in this particular is usually only a waste of words. Bulky, innutritious food must be discarded and the best diet is good, clean oats and a moderate amount of upland prairie hay, abstaining entirely from the clovers, including alfalfa. Water before feeding only. A half ounce of Fowler's solution in the feed three times a day for several weeks will be of considerable help as well as four ounces of raw linseed oil once a day. Do not begin this case and treatment unless you expect to carry it out. Persistence, however, will improve your case even if it does not cure it.

574—SORES ON JACK—My jack last winter broke out on the inside of his hind leg just above the hock or in the



(Continued on page 14).

Are You Helping The American Breeder Get The Business It Deserves For Service Like This

To the American Breeder:—Please do not repeat my advertisement. The way letters are coming in I would not get through writing answers in time for Thanksgiving dinner.—E. L. Wright, Cherokee County, Kans.

To the American Breeder:—Please take my ad out. I sold my jack the 23d of October to Mr. Henry Dimper, Ohiowa, Nebr. I have received over 24 letters from different places. If I have any more advertising to do, or I know of any one who has, I will do my best to get them to advertise in your paper. Accept my thanks.—Jos. F. Petr, Republic County, Kans.

VALUE OF PURE BRED MARES.

Does the average breeder realize the real value of a good pure bred mare. How long would it take for the investment to double in value? A regular producing mare properly handled should produce a colt nearly every year. Aside from the investment her feed and necessary expenses are not very great. Most mares will do enough work on the farm to be self supporting. After the first colt is two years of age the investment should double itself for every colt of that age. A two year old stallion or a mare properly developed, and by an outstanding sire, should be worth as much as the original price paid for the mare.

Where can money be invested to a better advantage? Is it any wonder that the breeders of this class of stock are making money? After the purchase of one pure bred mare it is remarkable how a herd of horses can be established in such a seemingly short time. Most of the breeders of pure bred horses have started with a single dam; they multiply like compound interest.

Nothing adds to the value of an establishment like a few pure bred mares. It creates a new interest in many homes.

We have often mentioned the fact that the owner of every pure bred stallion should, for numerous reasons, invest in a good female mate. The owner of every good stallion should do more than purchase a good mare himself—he should do some missionary work among his customers; encourage them to be custumers. Every man who buys a good mare will be a good support for better stock; in boosting colt shows; in fact, in all improvements. By interesting a few individuals in a neighborhood, a great change can be made in a very few years. The breeders could talk to these men to a good advantage; he could write to those holding public sales of such mares and ask them to send catalogues to those of his customers who could use such mares to best advantage. He might also go with them to the sales and assist them in buying mares.

If the owner of every good stallion will set aside a few days for this particular purpose, a great change in the horse breeding business in this country would soon take place. The pure bred mares are not very plentiful. If the breeders in one good state should all become interested in pure bred registered draft mares, the surplus would all be taken. There are only a few small districts in Europe where these mares are produced; the breeders there are slow to part with them, even at high prices. In fact, many of them value their mares much higher than their stallions. We should like to see the value of good pure bred mares fully appreciated by the American farmers.

SUBSCRIBERS' HOLIDAY EDITION.

We have set aside the entire issue of December 5 as the "Subscribers' Number." The material in this issue will be prepared by the readers of this paper themselves. We will turn it over to them now and we ask every reader to take an interest in this particular issue and write something for it. Any subject of interest to breeders of live stock will be appreciated. Subjects of interest or importance to their homes are also appropriate. We want every one to feel that he has a part in the making of this special issue; even if it is only three lines, we want it. It is not necessary to write lengthy articles; discuss some particular subject, making everything plain, in as few words as possible. We will correct the writing if requested.

Some breeders hesitate to express their opinions for fear some other breeders will take issue. We hope those having such an idea will abandon that view of the subject. Every one should invite honest criticism. If a breeder has a particular method that he has been using, some other breeder may have a still better plan. There is much value to these short articles coming from breeders who have had practical experience and who are interested in their fellow breeders.

No one can be quite as successful by living in seclusion as he could be if he had the ideas and experience of many. There are some who do not feel that they can write anything to interest others. Practically every article from breeders that has ever been printed in this paper has been very interesting to a majority of our readers.

We hope to encourage these contributions. We want the Eastern breeders to know what the Western breeders are doing. Those in the South, where the climate is warm, are anxious to know how the atmosphere is in the North. Occasionally breeders think that conditions in their vicinity are so common that it would not be interesting to anyone else. For instance, the loco weed which affects horses in the West is scarcely ever heard of in the East. All breeders are interested in this exchange of ideas.

Let us again ask every subscriber of this paper to consider that he has a special invitation to prepare an article of some kind for the December 5 issue. It will be known as the "Subscribers' Number." We want everything in that issue to be prepared by our subscribers. It matters not whether he may own one horse or a hundred—we want everyone interested. We want everyone to feel that he is going to help make that issue a success. Just as soon as the article is ready, send it in. Don't put it off. All material should be in this office by December 1.

VETERINARY CORRESPONDENCE SCHOOLS.

The American Breeder has on more than one occasion refused the advertising of veterinary correspondence schools, some of which is being accepted and carried by agricultural papers of general circulation in parts of our territory. We refused this business because we believed it impossible to satisfactorily teach veterinary science in the way proposed, and because we believed that any paper which carried such advertising became a party to bringing loss of time and money and eventually serious disappointment, if no worse, to the farmers' sons who should answer the advertisements. We did not wish to protest against the policy of other papers in taking money for such publicity, as that might be considered their own special business, but we are glad to have for publication on this subject the following communication from George H. Glover of the Colorado Agricultural College:

"Many young men with the best of intentions are taking correspondence school courses, presuming that credit will be allowed on this work for college matriculation.

"For the man who takes a course of this kind and hangs out his shingle we have nothing to say at this time, only that he receives no professional recognition and is not allowed to practice in most of the states.

"For the young man who is paying for such a course and laboring under the delusion that he will receive credits for college entrance, we wish to advise that no reputable veterinary college in North America gives any credit for college entrance or college work, for correspondence school courses."

BUYING A STALLION.

A Montana subscriber writes that he is in the market for a draft stallion but does not know what kind to buy. He states that he has a lot of small mares and he is told the Percheron does not have enough bone.

The most important information was left out of this query; he failed to state what he was producing horses for—a particular market or for some particular use. There are certain market standards that we have mentioned frequently that should be observed in all horse breeding operations. If these horses are to be produced for some special use, that also should have been stated.

There are too many breeders breeding horses in the dark. Here is an excellent subject for our readers to express their opinions on and this breeder is asking for the opinion of men on this subject. We shall take it for granted that he is producing horses for the market. What kind of horses can best be produced from these small mares weighing from 800 to 1,000 pounds? What type of a stallion should be used? What market should be supplied from the products of these small mares to the best advantage?

When we study this subject we are getting right down to business. Let us have ideas and experience.

THE LARGEST DRAFT STALLIONS

A Kansas subscriber is bothered about the largest draft breed of horses in the world. He has read in one book where the Belgian is undoubtedly the largest of the present day breed of horses, and in another book where the Shire is the largest.

The Flemish Belgian horses are the heaviest horses. The Shire horses, as a breed, have the largest frame and are perhaps the heaviest breed of draft horses. The Ardennaise Belgian horses are not as large as those bred in the Flemish sections, but these horses are increasing in weight rapidly. With the present government encouragement in Belgium for pensioned stallions it is only a question of time until the Belgian breed will eclipse all other breeds for weight. This weight question should not enter into the ordinary breeder's arguments to any great extent so far as the difference is concerned from an advertising standpoint. Weight is very essential in draft horses; an undersize draft stallion may possess comparatively little value, but it is better to have a good one from a little breed of horses than to have an inferior animal from the heaviest breed.

There are splendid specimens in all of the draft breeds. The breeds of draft horses affording the largest proportion of good individuals should attract the attention of all men interested in improvement. No breeder can stand on the reputation of the breed alone—he must have a good horse.

MARE OWNER EDITIONS.

This is a good time for every breeder to make up his list for the mare owner editions which will begin with the last issue in January and extend through February and March, making five numbers. If a breeder should thus spend as much as $10 for 100 of his customers, where could he spend that amount of money to a better advantage, from an advertising standpoint?

The owner of every good sire should be reaching out for more business better business, profitable business. If he has more business that he can attend to, he can be more independent about refusing a certain class of mares as well as of customers. The price of one colt should place him before the minds of a hundred or more of his neighbors, which should greatly increase his business. One extra service of the stallion on a clean, healthy mare, should do all this, with just a little effort.

Mr. Breeder, can you afford to turn down this proposition? There will be five issues with specially prepared articles for mare owners. Every issue will be a boost for good stallions and jacks. Scrub breeding will be discouraged; better care of the mares encouraged; prompt returns for retrial urged, and practically everything connected with a profitable breeding district discussed.

These subscriptions will be sent in clubs of ten for $1.00; additional subscriptions will cost 10 cents each. Each mare owner whose name is sent in will receive five papers. Each one of the subscribers will be notified from this office who has paid the subscription, and he will be requested to call and see the breeder and thank him for his kindness. Prepare the names and addresses carefully now and send them in. Do not put it off. Every breeder hopes to have an intelligent progressive breeding district. This is the cheapest method known.

STALLION FEED WASTED.

The feeding of stallions is a subject that should interest every breeder. It is a subject that has never received much consideration. The average sire is not subject to much exercise. His life is usually spent in seclusion. Some of them receive too much feed, others not enough; but the majority of them waste an enormous amount of feed. This is especially true of hay. In fact, some of them are greatly reduced in productiveness by not having proper feed, and especially during the winter months.

We want the experiences of our readers for the next issue if possible, telling just how much feed a stallion should have of the different feeds. How it is measured, whether by weight or measurement. Giving the weight of the stallion. Whether tests have been made with different kinds of feed and different plans of feeding

TRUMANS'

1878—Pioneer Stud Farm—1913

Remember Our Annual Mare Sale December 11th

¶ Since 1882 we have been putting in these mare sales such values in imported blood and individuality as could not be obtained at auction elsewhere on this continent. These mare sales (never big money makers for us) have had a great deal to do with Illinois' prestige as a draft horse state, and with the success of the now nationally famous **Bushnell Horse Show** and of the breeders who take part in it.

¶ **This Year,** preparatory to the **Mare Sale,** and to a great season's business in the **Best Imported Shire, Percheron, Belgian** and **Suffolk Stallions** we have ever had on hands,

Our Barns Are Absolutely Full

40 mares for the Auction. 125 Stallions for Private Sale.
Make us a visit on the day of the sale.

For catalog or information, address

TRUMANS' PIONEER STUD FARM

Bushnell, :-: :-: :-: Illinois

by weighing the animals at intervals. Give experiences as to the condition of the bowels resulting from changes and different kinds of feed. Specify the kind of a manger, feed box, floor for the stallion to stand on, ventilation for the stall, amount of exercise given each day. And, most important, tell how the stallion is watered, and the kind and amount of water consumed. Give the difference in temperature of the animal when fed on oats and on corn exclusively. With high priced feed, how much can be saved by studying these problems; how much better the physical condition of the stallion will be?

Stallions not properly fed have a very peculiar look. The owner begins to make apologies before the stable door is open. The right amount of good feed regularly given means dollars during the coming season.

AGRICULTURAL STUDENTS FROM TWENTY-FIVE STATES.

A parade of 2,300 students in the Kansas Agricultural College, representing twenty-five states and seven foreign countries, was one of the features of the first day's program of the semi-centennial celebration at the agricultural college, October 28, 29, and 30. The representatives from the twenty-five states marched with banners, in groups according to states, while the students who crossed the ocean to study in Kansas marched in the costumes of their countries as the "Cosmopolitan Club." Finland, Germany, Jamaica, Japan, Mexico, Hawaii, England and the Philippines were represented.

The fine live stock of the agricultural college—horses, cattle and sheep—all in full dress, were in the parade of the department of animal husbandry. A team of oxen owned by Gabriel Frank, Council Grove, Kas., a former student, contrasted strongly with the modern methods of travel shown later on in the parade. A herd of sheep, tended by student shepherds were not stampeded by the noise of the farm tractors and gas engines that followed in the exhibit of the students in the department of agronomy.

SHELTER NECESSARY THIS SEASON.

The scarcity of feed and the high prices should encourage every one to erect substantial shelter for all stock. This shelter should especially be water proof, as the cold rains are more injurious than cold weather. No other time is so depleting as that of a cold, long, drizzling rain. No other time does stock need as much feed. An enclosure should be equipped with plenty of ventilation. Stock that can be loose will fare better than those closely confined. A reasonable amount of money expended for sheltering live stock this season will save a lot of valuable feed.

IS YOUR STALLION ENTERED IN THE SUFFOLK SHOW

(Last Call—Full Directions Below)

Time Extended to November 20, When Entries Will Positively Close.

The Suffolk breed is one of the most uniform breeds of draft horses and possesses many qualities, which, were they more widely known, would add greatly to the demand for these horses. Just at this time publicity will do more for Suffolks than anything else can do. It is our purpose, in putting the Suffolks first in our series of photographic stallion shows to help in giving this publicity. If every man who owns a good Suffolk will co-operate with us the thing will soon be done—in good shape.

Competition in this contest is limited to mature animals—that is, stallions four years old or over. Each one, as its photo and description are received, will be given an entry number, which will be published with the picture and measurements. No names will be given out until the awards are made. Then all of the entry numbers will be published, along with the names of the stallions, and owners who entered them. Each photograph should give a straight side view of the stallion's body, but may show his head turned slightly toward the camera if the owner desires. Only a few measurements are required. The blank below shows which ones. These measurements, and a good, clear photograph will show pretty accurately to an experienced man, what the stallion is as an individual. Measurements should be taken with a tape line drawn tight enough to press tight to the skin, but not enough to press into the flesh. We reserve the right to have a committee remeasure any animal and to publish the result of its findings. Photographs can be any size, but those on which the stallion's body measures, in length, three to six inches are usually best. It is most important that they be clear and that the stallion stands straight and naturally when photographed.

Make all entries in the blank below; clip it out and mail to the American Breeder.

ENTRY BLANK FOR SUFFOLK STALLION.
American Breeder Stallion Show—Kansas City, Mo.

Enter my stallion, as follows:

Stallion's Name.....Record No. .....

Height (measuring from a point level with the top of the withers straight to the ground).....inches.

Heart girth (around body just back of the forelegs).....inches.

Bone (around foreleg, smallest place between knee and ankle).....inches.

Owner's Name..... County.....

Postoffice ..... State.....

CAPSULE METHOD BROUGHT BEST RESULTS.

To the American Breeder:—I want to say I have been breeding horses and mules for twenty years, and have done all of the work myself. I have anywhere from 250 mares down each year, and have had good luck getting colts by natural service. I was a subscriber to your paper, the Stallion and Jack News, and am still a subscriber to the American Breeder, and have followed its teachings the best I could. I have mules by artificial breeding from all of the methods ever taught, but can say I have used the capsule method with best results. On one occasion I capsuled two mares and four jennets, all out of one cover from my jack. The two mares have mules and the two jennets that I have at home have colts. One of them had a pair of colts, a jennet and a jack colt, all out of one capsule; the two jennets that have brought colts were not in heat at all when I capsuled them. I do not know whether the other two will have colts or not, as they are some distance from me. I know, also, that capsule breeding is the thing for the people to call for, because it keeps a horse and jack in good condition and they will get a stronger colt when they are not "warped down."—W. C. Milling, Newton County, Miss.

Animal Husbandry Students From the Texas Agricultural College Attending the State Fair at Dallas.

THE KANSAS FEED LAW WORKING.

To the American Breeder:—A Kansas City miller, R. J. House, proprietor of the Dixie Milling Company, who has been adulterating feed chop with sand, was caught this week by officers of the Kansas Agricultural College. L. A. Fitz, head of the milling department of the college, whose duty it is to enforce the Kansas Feeding Stuffs law, has confiscated several sacks of the adulterated chop at Iola and Garnett and will prosecute House. On the evidence obtained by Mr. Fitz and one of his feed inspectors, House was expelled from the Kansas City Board of Trade this week. The percentage of sand in the feed was not large, but it enabled the Dixie Milling Company to sell its goods at prices a shade lower than other concerns, thereby getting business it could not have obtained legitimately. House admits that he adulterated the feed. The maximum penalty for the offense under the Kansas law is a fine of $100.—Publicity Department, Kansas Agricultural College.

THE LEADING QUESTION.

The Medium—We are now in communication with your departed wife. Do you want to ask her any question?

"Yes; I'd like to know where she put my winter underwear."—Life.

REGISTERED SHIRE STALLION
For sale. Three years old. Priced to sell.
D. S. WHITE,
Alma, Marion County, Illinois.

Silage for Horse Feeding

More Information On How An Economical Kind of Feed Can Be Safely Utilized In the Care of Horses. A Ration For Brood Mares. Cautions.

By George M. Rommel, Chief of Animal Husbandry, Division, Department of Agriculture.

Silage has not been generally fed to horses, partly on account of a certain amount of danger which attends its use for this purpose, but still more, perhaps, on account of prejudice. In many cases horses have been killed by eating moldy silage, and the careless person who fed it at once blamed the silage itself, rather than his own carelessness and the mold which really was the cause of the trouble. Horses are peculiarly susceptible to the effects of molds, and under certain conditions certain molds grow on silage which are deadly poisons to both horses and mules. Molds must have air to grow, and therefore silage which is packed air tight and fed out rapidly will not become moldy. If the feeder watches the silage carefully as the weather warms up he can soon detect the presence of mold. When mold appears, feeding to horses or mules should stop immediately.

It is also unsafe to feed horses frozen silage on account of the danger of colic. This is practically impossible to avoid in very cold weather, especially in solid wall silos. By taking the day's feed from the unfrozen center of the silo and chopping away the frozen silage from the edges and piling the frozen pieces in the center the mass will usually thaw out in time for the next feed.

Corn to be made into silage for horses should not be cut too green, as sour silage will result and may cause colic when fed. The corn should be well matured and cut when the grain is beginning to glaze. The silo should be filled rapidly and the corn should be vigorously tramped and packed while filling. At least three men should be inside the silo, moving constantly, two around the edges and the third across and around the center. This is by far the most important point in connection with feeding silage to horses, and the lives of the horses fed on sliage may depend on the thoroughness with which the tramping is done. If properly done no danger is likely to result; if not properly done air pockets may form and cause the accumulation of a small mass of mold which the feeder may overlook, but which might be sufficient to kill one or more horses.

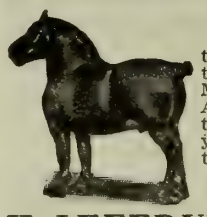
The value of silage for horses is greatest as a means to carry them through the winter season cheaply or to supplement pasture during drouth. As the danger of mold is greater in summer than in winter, silage should not be fed to horses in that season unless a large number of animals are getting it and the daily consumption is so large as to preclude the formation of mold on the surface.

To cheapen the ration of brood mares in winter no feed has more value than good corn silage. If the grain goes into the silo with the stover no additional grain is needed for brood mares, hay being the only supplementary feed necessary. If there is little grain on the corn the silage should be supplemented with one pound of old process linseed oil meal or cottonseed meal daily per 1,000 pounds live weight, sprinkled over the silage.

Horses to be wintered on a silage and hay ration should be started on about five pounds of silage daily per 1,000 pounds live weight, the grain and hay ration being gradually decreased as the silage is increased until the ration is 20 pounds silage and 10 pounds of hay daily per 1,000 pounds live weight. It will require about a month to reach the full feed of silage, but the period may be decreased somewhat, depending on the judgment and skill of the feeder.

Mares fed in this manner will be in splendid condition for foaling, and so far as the writer's experience goes the foals will be fully as vigorous, with just as much size and bone as if the mares were fed the conventional grain and hay ration.

Work horses when idle can be wintered satisfactorily in this manner, but much silage is not recommended for horses at heavy work for the same reason that a driving horse can not do his best while on watery grass pasture.



The writer knows of cases where stallions receive a ration of silage, but has had no experience in feeding them in this manner. There seems no reason why silage should not be a valuable feed for stallions during the idle season.

Silage should also be useful for young horses, especially drafters, but here again the writer can not quote his own experience and experimental data are meager.

To summarize, silage is safe to feed to horses and mules only when it is made from fairly mature corn, properly stored in the silo. When it is properly stored and is not allowed to mold, no feed exceeds it as a cheap winter ration. It is most valuable for horses and mules which are not at heavy work, such as brood mares and work horses during the slack season. With plenty of grain on the cornstalks horses will keep in good condition on a ration of 20 pounds of silage and 10 pounds of hay for each 1,000 pounds of live weight.

Charlotta Pontiac, a 7-year-old Holstein cow owned by the Missouri College of Agriculture, has beaten the record of Missouri Chief Josephine in butter production. She produced in one month 2,146 pounds of milk, which tested 3.57 per cent

BELGIAN EMPORIUM OF AMERICA

Largest collection of Belgian draft horses on earth. Also 20 choice Percheron stallions. The fall importation of 100 head, the second importation for 1913 swells the number on hand to 175 stallions, mares and colts. Many prize winners; many descendants of prize winners. All choice animals. We are farmers and stock breeders; twenty-eighth year in the Belgian horse business. Each year adds to our strength, and now we can defy competition in quality, quantity and prices.
Four farms, all adjoining; 7 large barns.
Write for free illustrated catalogue.
H. LEFEBURE & SONS, Fairfax, Linn Co., Ia.
(Eight Miles from Cedar Rapids.)

IRVINDALE FARMS BELGIANS AND PERCHERONS. THE BIG, DRAFTY KIND.
Forty head stallions and mares—a good useful lot. Stallions 2100 to 2350 pounds at maturity. Prices $300 and higher, according to quality. One six year old roan Belgian; weight 2240 pounds; a winner in every ring entered (but one) since a yearling. All sound and sure breeders. Mares will weigh 1900 to 2200 pounds in show condition. Price $250 to $800.
Terms cash or bankable paper. We will pay expenses to any one that does not find stock as represented. Inspection invited. Farm at Ankeny, 10 miles north of Des Moines on C. & N. W. R. R. and Ft. Dodge, D. M. & Southern Interurban. Will meet trains is notified. CHAS. IRVINE, ANKENY, IOWA.

SUCCESSFUL COLT RATION WITHOUT OATS.

To the American Breeder:—Strong, healthy draft horses can be produced without oats. An experiment in progress at the Kansas Agricultural College has disproved the belief common among farmers that this feed is necessary for growing colts. After more than nine months' feeding in this test the colts that have had no oats are in better condition than those which ate this feed, and have made a little better gain. More than this, the combination ration of corn, bran, and oil meal cost 20 per cent less than the oat ration.

The experiment, which is to last three years, was started last January by the department of animal husbandry. Twenty colts were purchased—ten grades and ten purebreds. These colts were divided into two lots, with five purebreds and five grades in each lot.

For nearly a year the two lots have been fed the same sort of roughage—alfalfa, corn fodder, and pasture. One lot has been fed oats every day and the other has had a combination ration consisting of 70 per cent corn, 25 per cent bran, and 5 per cent oil meal. These percentages are based upon weight, not volume. One pound of this mixture contains the same digestible elements as one pound of oats. Also, from the standpoint of energy value, the two feeds are equal, pound for pound. Each lot of colts has received the same number of pounds of grain.

"The test shows that there is a great chance for saving in feeding," said Dr. C. W. McCampbell, assistant professor of animal husbandry, who has charge of the test. "A farmer can better afford to feed the mixed ration, with corn at 85 cents a bushel, bran at $30 a ton, oil meal at $40 a ton, and oats at 50 cents a bushel. The figures will prove it.

"When the experiment was begun, in January, prices were more nearly normal than they are now. Oats at that time cost ten and one-half cents a day, while the combination feed cost eight and one-fourth cents a day."—Publicity Bureau, Kansas Agricultural College.

REGISTERED BELGIAN STALLION.
Three years old. Priced to sell.
WM. J. CORBIT, Anamosa, Iowa.

Six Year Old Stallion
For sale; black; weighing 1900 in breeding condition; could be made weigh 2,000 or more. His sire and dam both imported. Also have for sale one coming two years old.

Equine Flesh at a Premium

Horse and Mule Feeders Not Very Active. Samples of Winter Weather Making Cattle Movement Uncertain. Declines in Meat Animals Excepting Sheep.

Flesh is at a premium in the horse and mule market. The South and East are buying but they demand that their purchases carry flesh, and on that inquiry prices for well conditioned animals are $10 to $15 a head higher than for the thin kinds of equal quality. A horse fattens quickly at this season of the year with proper rest and exercise. And it is the general advice of the trade to get offerings in good shape before shipping an offering for sale. Buyers say horses they are taking are for immediate use and if animals have to be conditioned the training process is too slow. While the general demand and that that should be catered to is for fat animals, there is some demand for thin grades for feeding purposes. Owing to the high prices of feed men who are in the feeding business are inclined to scalp the market for bargains. In the past week several loads of mules have gone to Missouri and Kansas feed barns. The East, especially Pennsylvania, is turning its attention more to cattle feeding than a year ago, and few fat horses will be available in the East for the spring market. It looks like fat horses in the central West will meet a healthy demand.

As to the market in particular there is every evidence of a good trade. Receipts have been about normal for this season of the year, and in many cases prices have been quoted up $5 to $10 a head. Easterners complain that heavy drafters are not plentiful, and that good chunks are scarce. Farmers are showing a disposition to hold their good horses and mules, realizing that they can be cashed easily at nearly any season. The only depression dealers see is in the holiday trade, and shippers are advised to treat the market at that time with light offerings. The recent advance in cotton prices has bolstered up the demand for good mules. Cotton now is $4 to $5 a bale higher than a year ago, and though this year's crop is smaller than last year's its cash value will be greater. It is a quiet season in the corn belt trade, and except for horses and mules moving to feed lots, and into big cities, there is no particular demand. The recent rough weather, unseasonable for October, has caused a suspension of farm work and other than gathering corn the season's farm activity is about at an end. The Northwest is tied up with snows and cold weather, and both cattle and horses have been turned to winter ranges.

Driving and saddle horses are practically without demand, except as a good driver and worker, in one is sought because of the dual purpose.

The following quotations are for serviceably sound horses and mules, 4 to 7 years old:

Horses—

Drafters, choice, 1600 lbs. up.	$250@290
Drafters, fair to good	165@250
Chunks, fair to choice	140@185
Chunks, fair to good	100@140
Expressers and light draft	75@125
Plain workers	60@ 95
Southerns, good	140@175
Southerns, plain to fair	90@135
Plugs	15@ 45

Mules—

13 to 14 hands	$ 95@140
14 to 15½ hands	135@175
15½ to 16 hands	165@215
16 to 16½ hands	210@300

Two Views of Cattle Trade.

Cattle trade has been sticky from one angle, but good from another. The difference lies in quality and flesh. Choice fat steers are about 10 to 20 cents lower, on heavy grades and steady on finished yearlings compared with two weeks ago. Packers are holding prices on the medium to common classes down until the big movement from the West is over and then a general rise is anticipated. Chicago is drawing more cattle now than earlier in the season, but Northwest cattle were forced there by the severe late October weather. In this supply Montana, Dakota, Wyoming and Canadian cattle figured conspicuously. The latter were mostly stock grades, that movement being increased by the removal of the tariff, and dry weather in some sections. Just in proportion as they have sold out this year, to that extent they will have to restock next year. In Colorado, Texas and Oklahoma final shipments are being made to markets and the reserve supply other than breeding cattle, are going to oil mill districts, and to the vicinity of sugar beet mills, where they will be fed. With the assistance of silage these two states should make a large amount of beef this winter. Kansas and the Western half of Missouri are the sections that will have fewer fat cattle than for a number of years past. Feeders generally are not in a condition for holding cattle long and a rough winter will find supplies marketed closely. The top price for yearlings in St. Louis and Chicago within the past two weeks was $9.75, and in Kansas City $9.55. Only a few bunches sold above $9.25. Most of the fed steers are selling at $8 to $8.75. The grass fat offerings showed wide quality and sold from $6.25 to $7.85 on the native side, and on the quarantine side at $4.75 to $6.75, with fed grades as high as $8.50. Both St. Louis and Kansas City have received cattle, mostly "canner" grades, from Florida, Alabama, Mississippi, Louisiana and Arkansas. Packers have bought this common stuff more readily than the better grades.

Quotations from the various grades of killing steers are as follows:

(Continued on page 13.)

Another Large Importation

Stallions--Percherons--Belgians

Landing November 4th,

will be sold at bargain prices

Geo. W. Souers & Sons, Huntington, Ind.

The West's Largest Importing and Breeding Establishment

Percheron, Belgian and Shire Stallions and Mares. We claim the best collection in America; determine this by inspecting them yourself. Prices lowest. Address

L. R. WILEY, Emporia, Kas.

WHITEOAK STOCK FARM

American bred Percheron Stallions and Mares.

The best to be had of the breeder—can show sires and dams of most of them. Always a large number to select from at reasonable prices, considering the kind of stock. Address your wants to **D. Augatin, Carlock, Ill. R. F. D. No. 2.**

Carlock is on the L. E. & W. Ry., and thirty miles southeast of Peoria, ten miles northwest of Bloomington, Illinois.

PERCHERONS

Prices That Will Profit Early Buyers on Both Stallions and Mares.

The mares range in age from weanlings to aged mares, and the stallions from weanlings to 3-year olds past.

I have been in the business a long time and on account of not being able to get competent help am compelled to close out. If sold in a bunch I will make the price right.

GEORGE HIRSCHMAN, Pierson, Iowa

IMPORTED AND HOME BRED STALLIONS AND MARES.

PERCHERONS, BELGIANS, SHIRES.

The best importation we ever made is now in our barns ready for inspection. The mares include some of the best fillies that came out of the Perche this year. See what we have before buying elsewhere. **Address Hart Bros., Osceola, Iowa.**

Chester White Hogs.

Feb. 10—B. M. Boyer & Sons, Farmington, Ia.

When W. S. Corsa, White Hall, Ill., paid $10,000 for the champion Percheron stallion, Carnot, he might reasonably have begun at once advertising the greatest Percheron stallion on the American continent, and he might have bought up as many mares as could probably be bred to this horse and sold them at enormous profits. He did nothing of the sort, but what he did do was characteristic of himself. He already had started a collection of very high class mares, and to these he has added carefully rather than frequently. He made no claims for Carnot as a sire until he had the evidence on his own farm. One of the first of these was the filly, Maude Carnot (illustrated in Mr. Corsa's sale advertisement in this issue), which was good enough to sell for $1,000 at weaning time. Last year Mr. Corsa went out with the first full crop of Carnot colts dropped at Gregory Farm and made the leading shows with a success that is perhaps unprecedented. To print the details of his winnings would be a long story in itself. This year only one show was made—the strongest of the state fairs from a draft horse standpoint. Here a son of Carnot was made grand champion and several other prizes fell to Carnot's get in the only other ring in which they appeared. But by far the most sensational and significant winning of the show came when the Carnot fillies led out for Futurity money. With the strongest showing of Percheron fillies ever made at any state fair, and with the class open for every Percheron stallion in America to have colts in competition, these daughters of Carnot won second, third, fourth, fifth and sixth money. Only one filly out of 37 entered being strong enough to break the line. Carnot blood is the feature of Mr. Corsa's annual sales of which this year's sale will be held December 9. Address Mr. Corsa at White Hall, Ill., for a catalogue, and mention the American Breeder.

Beginning with 1882, Trumans' Pioneer Stud Farm, Bushnell, Ill., has been holding frequent public sales of high class Shire mares. These sales have not been big money makers, and were not held with this in view, but the placing of these mares on many of the best farms in the corn belt, has resulted in many demonstrations of the Shire's superiority as a draft animal. Not only have Messrs. Trumans benefited by the better educated demand coming from communities which have thus come to know the Shire, but every importer and breeder of Shires in America has always profited. In the coming sale of the Pioneer Stud Farm to be held at Bushnell, December 11, the offering will be one of the very best this farm has ever gotten together. It will include all prize winning females shown by Trumans this year, and others as good but imported too late to show. It is a compliment to the old customers of this firm, who by the way, do most of the buying in these mare sales, that the Trumans have, at considerable extra expense, gotten together this more than usually good offering. Write as above for catalog, not only of these mares, but of the 125 stallions now in the barns at Bushnell, and always mention the American Breeder.

The best bargains we have ever seen offered in blankets, overcoats and high top shoes, are advertised in this issue by Cal Hirsch & Sons, U. S. Dept. 212 St. Louis, Mo. Be sure to write at once for this firm's catalog.

Fravel's influenza and distemper immunizing remedy, advertised in this issue, is made by A. W. Fravel, P.H.G. V.S. The prescription he has used and thoroughly tested in his own practice. Mention the American Breeder when answering this advertisement.

Ship hides or furs to M. L. Lyon & Co., 268 Delaware Street, Kansas City, Mo. Send for their Trapper's Guide and price list.

A farm engine that has become widely popular on its merits is made by the Ottawa Mfg. Co., Ottawa, Kans. Write for this company's catalogue, mentioning the American Breeder.

Have you investigated the economy of using the steel shingles made and advertised in this paper, by the Edward Mfg. Co., 1026-27 Lock Street, Cincinnati, Ohio.

Twice every season the M., K. & T. Railway calls its hundreds of home and investment seekers into the great Southern territory which it traverses. For facts concerning the opportunities which bring people to travel on this line, address W. S. St. George, G. P. A., M. K. & T. Ry. Co., St. Louis, Mo., and mention the American Breeder.

Among the Western draft horse advertisers, whose announcements begin with this issue, notice that of L. R. Wiley, importer and breeder at Emporia, Kans., and mention the American Breeder when answering this advertisement.

Probably no other all 'round live stock remedy has been so long and constantly used among the best stock raisers and farmers of the corn belt, as have the Lion remedies made by the Live Stock Remedy Company, St. Louis, Mo., as advertised in this paper. Notice the kind of men who use and recommend these remedies.

Write A. W. Green, Middlefield, Ohio, for his illustrated circular describing 50 Percheron and Belgian stallions and mares which he has for sale.

Alfalfa, silos, peanuts, milo maize, kafir corn, sweet clover and other possibilities in connection with the growing of live stock, are constantly becoming better known and this knowledge is emphasizing the opportunities of the great open sections traversed by the Santa Fe. For a lot of information on Northwest Texas, including the actual experiences of settlers written by themselves, address a postal card to C. L. Seagraves, 2511 Railway Exchange, Chicago, Ill.

Two Percheron Stallions

For sale, of the big kind; big bone; best of quality; weight 1700 to a ton; 4 and 8 years old. Will price to sell at once $500 and $800 at barn door. I have rented my farm and must sell on account of poor health.

WM. N. UREN,

Jonesdale, Wis. Route 1.

C. F. McClanahan of Shenandoah, Ia., has a jack and a Percheron mare to sell or exchange for weanling or yearling Percheron colts. He also has Mule Foot hogs for sale.

L. D. Norris, Redding, Iowa, has a Percheron stallion and a jack advertised for sale in this issue. He invites inspection.

SADDLERS

For sale. Ten head of registered saddle bred brood mares, mostly in foal to Astral King. These are right good mares and most of them are by good sires, but sires without reputation. They may suit you, but they are not the kind of mares that I want to keep, and I am going to offer them for sale at reasonable prices. If you are open to buy a saddle bred brood mare, come down and see what I have to offer, and I will sell you one at the right price. I also have some young stallions and some young fillies one and two years of age for sale, and will sell them to you right. By right, I mean I will sell them to you worth the money, being the kind of stuff that they are. You cannot buy an Astral King for the price that you can buy the ordinary kind, but if you haven't got the money, I will sell it to you on time. If you want to start right, get the best, and the best is the Astral King kind. I will be glad to have a visit from you if you are interested in saddle bred stock of the right kind.

JAMES HOUCHIN, Jefferson City, Mo.

SADDLERS FOR SALE.

Registered stallions and mares; all ages. Also a few Hereford bulls.

H. A. GREENWELL, Lakenan, Mo.

MORGAN AND PERCHERON HORSES

Make Money With Poultry

AMERICAN POULTRY is a magazine devoted entirely to helping earnest men and women make a financial success of poultry raising. Its staff of writers is composed entirely of those who have made a practical, instead of theoretical, success of poultry farming, and who are glad to pass on the results of their hard earned experience to AMERICAN POULTRY readers.

There are many pit-falls in the path of the novice which may be entirely avoided by those who will follow the teachings set forth in this magazine. It fully explains how to make a start, how to construct houses, coops, and other devices, how to get a large egg yield, how to cure and prevent disease, how to exhibit, how to get the top price for eggs, how to use incubators and hundreds of other points which everyone wishes to know. It explains the famous secret system through which poultrymen have become rich and afterwards sold for hundreds of dollars.

AMERICAN POULTRY is a large, handsomely illustrated, monthly journal, well printed on fine paper, and should be found on file in the home of every poultry lover. No beginner in the poultry business should think of being without it. It will save him many times the small subscription price. The advanced poultryman will also find it of great value; the articles being varied in their scope.

SPECIAL OFFER. The regular price of AMERICAN POULTRY is 50c per year, but in order to introduce it to several thousand new readers, we will, for a short time, give a 200-page poultry book, which is a complete guide in the poultry business, ABSOLUTELY free to everyone sending 50c for a yearly subscription, or $1.00 for a three year subscription to AMERICAN POULTRY. A trial six months' subscription (without book) will be sent for 25c. Never has so much been offered for so small a sum. Advantage of this offer should be taken at once.

AMERICAN POULTRY
SAVOY BLDG., WILKESBARRE, PA.

CATTLE AND HOGS.

GOOD SHORTHORNS.

Pratical cattle for both beef and milk. Just the kind the farms of the country need, and with breeding and conformation to make show cattle, if you want them. I show my breeding stock successfully, but no stock is ever crowded enough to hurt it.

Pleased to show stock, quote prices and answer inquiries at all times.
C. H. White, Burlington, Kas.

GUERNSEY BULL CALVES

for sale at $25 to $35 per head.

Jack stock, Percheron, Standard bred and German Coach stallions always for sale.
O. L. THISLER, Chapman, Kans.

Read the ad of Chas. Griesemer, Hopedale, Ill., in this issue. He is advertising Percherons.

A. R. Ives of Delavan, Wis., starts his ad in this issue. He has a lot of good, young Percheron stallions and

Al. E. Smith of Lawrence, Kas., the mares that he is offering at bargain prices at terms to suit.

well known breeder of jacks and jennets, starts his ad in this issue. Any one in the market for stock of this kind should be sure to get in communication with him for prices and particulars.

"Box 86," Wheatland, Mo., is advertising two jacks and a Percheron stallion for sale or trade. Be sure to read the ad in this issue as it appears but once.

J. P. Anderson of Agenda, Kas., is advertising two Percheron stallions for sale or trade, two and three years old. Look up the ad.

Chas. Irvine, Propr. of Irvindale Farms, Ankeny, Iowa, and one of the most reliable importers and breeders of Percherons and Belgians in the country, starts his ad in this issue. He invites inspection of his stock and will pay any one's expenses that does not find his stock as represented. Read what his ad says.

Any one in the market for Belgians or Percherons should send to H. Lefebure & Sons, Fairfax, Iowa, and get their free illustrated catalog, telling all about their stock. They have 175 head of stallions, mares and colts to select from. Their ad starts in this issue.

J. C. Stewart of Monmouth, Ill., has four Percherons advertised in this issue that he is offering at a bargain. Look up the ad.

There are always many bargains to be found at a closing out sale. Read the ad in this issue of F. E. Knowles, Wellington, Kas. He is selling out his stock and barns.

Stanley Turner of Water Valley, Texas, wants to exchange some young jacks or jennets for a draft stallion. He also has 30 mule colts and 40 horse colts for sale. Write him for particulars.

O. L. Thisler & Sons of Chapman, Kas., start their ad in this issue. They have Percheron stallions, jacks and Guernsey calves for sale. Anyone in the market for stock of this kind would undoubtedly do well to write them for full particulars.

Mr. W. W. Goodliff, Bolivar, N. Y., writes under date of February 9, 1912: "I have taken a bunch off a horse's knee with Absorbine and glycerine that a veterinary said was ruined for life. Today he is worth $2,000. I am handling a good many horses and think that Absorbine will cure most anything." Let Absorbine make money for you. It will reduce swellings, and soft bunches, stop lameness and inflammation, allay pain; heals cuts, bruises, lacerations, boot chafes, saddle galls, etc., without blistering or removing the hair and horse can be used. $2.00 per bottle at all druggists or delivered. W. F. Young, P. D. F., 388 Temple St., Springfield, Mass.

The frequent demands from our thousands of customers for a first-class liniment, effective both for use of human beings as well as for live stock purposes, has caused us to work out by actual test one of the most penetrating and highly efficient liniments ever offered the public. In all cases where the use of a liniment is indicated, Spohn's Liniment will be found superior in its results. In such cases as colic, colds, and sore throat, this liniment has proven safe and effective. As a remedy for internal use, Spohn's Liniment has the same high qualities as possessed by that most marvelous veterinary specific, Spohn's Distemper Cure. This liniment is put up in bottles of good liberal size, and is sold by druggists, harness dealers, or the manufacturers, on receipt of the price, 50 cents and $1.00 a bottle, $5.00 and $10.00 the dozen. Manufactured exclusively by Spohn Medical Co., Goshen, Ind., U. S. A.

B. F. Marmion, Farmington, Iowa, is offering some of the biggest and best Poland Chinas that he has ever owned. They are the large, smooth, easy feeding kind that can be fed out at any age and be in a marketable condition. The pigs he is offering are largely of early farrow, one fall yearling by Pawnee Orange, by Big Orange, is just right for some farmer who wants to breed a large number of sows. This boar is a sure breeder of large litters. Mr. Marmion has some very good May boars just right for December use and if purchased soon the express charges would be very light. Write Mr. Marmion your wants, mentioning the American Breeder.

In a new advertisement Lefebure & Sons announce to those who are interested in Belgian horses that they have the largest collection of that breed on earth, as well as twenty choice Percheron stallions. Their second importation for the present year, numbering 100 head, has already arrived, which increases the number on the farm to 175 head. These are prize winners and descendants of prize winners, right every way, and good enough for the most critical buyer. For particulars write to H. Lefebure & Sons, Fairfax, Iowa, and mention the American Breeder.

To the American Breeder:—At the Rippey Farm Festival, held here October 3 (while I was in Kansas City), the get of the aged stallion I am advertising in the American Breeder won all the premiums for pure bred Percherons, and in the show were the get of over 20 stallions coming from a radius of over 12 miles around Rippey. The get of this stallion also won the first three out of four places in the grade class. No colts of my own were shown. —C. F. Jones, Rippey, Ia.

Geo. W. Souers and Sons of Huntington, Indiana, call attention to their last shipment of stallions and mares which arrived in New York about November 4th. In this lot are to be found some of the best draft stock ever brought to America and those looking for good ones will make no mistake in calling upon this reliable firm. Mr. Carl K. Souers has spent some time in Europe selecting this shipment and we are sure you will not be disappointed should you call and see them. Prices will be made quite close and terms as liberal as good business will permit. Fair and honorable treatment has been the motto of this firm and we are pleased to note their rapid advance in the ranks of the importers upon whom the people can rely and among those whom we feel free to recommend to our readers.

SIGNS OF PREGNANCY IN ANIMALS.

To the American Breeder:—It is sometimes of considerable importance to a farmer to know whether or not a mare, cow or sow is pregnant, since her general care and value may depend upon this point.

There are certain signs evidenced by pregnant animals that may be observed with more or less satisfaction. One of the earliest of these is the cessation of heat, although some pregnant females may continue to show estrum at regular periods for months after conception. Most females become tranquil, tend to fatten, the abdomen enlarges and cows giving milk tend to give less. In animals pregnant for the first time, the udder

Enrich Yourself

Supplying a Great Demand

The price of beef is steadily rising, due to the shortage of beef cattle. It is no longer profitable to raise cattle on ranges. That was a wasteful method, and with the passing of free pasturage the costs are too great to leave a profit. Yet people need beef and are willing to pay good prices to get it. That is the demand you may profit by supplying.

Search all over this continent and you will find no section in which cattle do as well or can be raised as cheaply as on the plains of northwest Texas. It is the natural home of the steer. Here great herds roamed in the early days. They fed on the luxurious grasses and went to market without grain. Latterly their weights and the owners' profits have been increased by grain-feeding near to the slaughtering market. But that is now too expensive, considering the high price of corn.

It has been found that the steer can be fed and finished here on ensilage and milo and kafir grain. The cost of feeding is reduced — the quality of the meat improved — a better price is secured and once again beef cattle are money-makers.

The territory available for this work is the millions of acres of northwest Texas, where the rainfall is less than twenty inches a year. It is too dry for corn, but milo and kafir thrive under dry-farming methods.

Herefords are graded up to nearly pure blood and they are the most profitable animal to feed. Weanlings can be brought up to 1,400-pound steers in less than three years, and this young beef sells well, saving a year's time, interest and feed.

Hogs thrive on the same feed. This is their climate, too, as there are no diseases in the high, dry air.

Lately it has been found that upward of one million acres of this fertile prairie is underlaid with an inexhaustible supply of pure water, near enough to the surface to be economically pumped and used for irrigation. This water makes the production of tremendous crops of feed easy and certain. With water, 50 bushels of wheat, 100 bushels of oats and 80 bushels of kafir are not unusual yields, and a small acreage of the irrigated land with a larger area of the dry land forms an ideal stock farm. Irrigation here means stock-feed insurance and is a guarantee of your profit.

The opportunity here is described in detail in a new folder just issued by the Santa Fe entitled "The Shallow Water Country of Northwest Texas." I would like every stock-grower in the country to read it as well as our leaflet, "Letters from Farmers." Then, if you are interested in following the matter further, I will be glad to place at your service the faculties of this department to assist you in finding the location best adapted to your needs.

The interest of the Santa Fe in settlers along its lines does not cease with helping them to select a location. We have a corps of agricultural demonstrators, who are employed by the railroad to help settlers to learn as quickly as possible the best crops and methods of handling for any given section. The assistance of these men will be yours without cost, and the enthusiastic letters from settlers already here will show you that their advice means a large increase of profit to those who have taken advantage of it.

Drop me a postal for this "Northwest Texas" folder and leaflet.
C. L. Seagraves, General Colonization Agent, A. T. & S. F. Ry,
2511 Railway Exchange, Chicago.

Now is the time

to make a trip to Texas and see just where *your* opportunity lies.

The price of good, rich land in Texas is so low that you can own a big farm there without investing much money or mortgaging the place. The land will raise as big or bigger crops than you are now raising, and you will get better prices for what you raise.

Ask your local agent to sell you a ticket via the Katy—or tell me where you want to go and I'll plan your trip, and give you full information about the *low homeseeker's excursion fares* on the first and third Tuesdays of each month.

I will also send you our free books on Texas opportunities if you want them. Write today.

enlarges soon after conception, loses its wrinkles, becomes firm to the teat, and the teats become more visible.

In the last weeks of pregnancy, there forms at the opening of the teat a white opaque substance called wax. Numerous tests have been invented for determination of pregnancy, but few of them are reliable.

After the third months of gestation, pregnancy may be certainly diagnosed by palpation through the walls of the rectum. This should only be done, however, by some one perfectly familiar with the procedure, since very sever accidents have resulted from manipulations at the hands of untrained persons.

The following method is said to have been practiced in India for ages. A drop of milk from the animal under consideration is dropped from a clean straw into a tumbler of water. If the cow is not with calf, the milk at once mixes with the water with a flocculent cloudiness. If she is pregnant, the drop falls to the bottom of the glass hardly mixing.

Manipulations through the walls of the abdomen to ascertain the presence of the fetus, do not yield equally certain results in all domestic animals. In small species, such as a dog and cat, this method is very effective from the middle period of gestation onwards. In larger animals the results are not so satisfactory.

In the cow, after the fifth or sixth month, the presence of the fetus can be readily ascertained by pressing the hand into the right side, permitting the fetus to swing and gently strike the hand. After the fifth or sixth month, movements of the foal may be seen by watching the left side of the mare. The pulse of the fetus can only be heard by the aid of very sensitive instruments.—H. E. Kingman, Colorado Agricultural College.

MARKET REVIEW.

(Continued from page 9).

Prime corn fat steers	$8.75@9.50
Good to choice steers	8.15@8.80
Fair to good steers	7.65@8.10
Common to fair steers	7.00@7.60
Meal fed, choice	7.65@8.30
Meal fed, common to fair	6.25@7.60

Medium Butcher Cattle Lower.

Killers are trying to make both ends meet in the butcher cattle line. They want good to choice heifers and cows, and they want "canners" and cutters. The only variation afforded has been on the medium grades of cows and heifers and they have fluctuated 15 to 25 cents in price. Monday more canner cows were offered than in a long time past, yet demand was sufficient to absorb the supply without disturbing prices. Such cattle are selling at $4 to $4.65. Choice heifers sold as high as $9.10, and steers and heifers mixed up to $9.25. As soon as the range movement is over there will be few cows and heifers available, and prices are expected to advance. Veal calves are in active demand, and prices in the past two weeks have fluctuated only 25 to 50 cents. Bulls are selling at $4.50 to $6.75, or about 25 cents lower.

Cows—	
Choice	$6.65@7.40
Fair to good	5.85@6.60
Common to fair	5.25@5.80
Canners	4.00@4.65
Heifers—

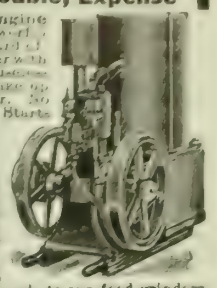
Plain to fair	6.50@7.40
Common	5.40@6.45
Veal calves	6.00@9.75
Bulls	4.25@7.00

Slump in Thin Cattle.

Prices for thin cattle underwent a material change in the past ten days owing to continued liberal receipts and a decrease in demand. Quality was not as good as in former weeks, and that, added to the weakness in the market, compared with two weeks ago, prices are down to 35 to 50 cents, the lowest level of the season having been recorded late last week. It will be only a short time now until the big stock and feeder movement will be ended. Stock calves, cows and heifers have declined only 15 to 25 cents and the demand for them is as active as any time previously this year. Milk cows are scarce and higher, and this winter promises still higher prices.

Selected feeders	$ 7.50@ 7.90
Good to choice feeders	7.00@ 7.45
Plain to fair feeders	6.25@ 6.95
Good to choice stockers	6.75@ 7.50
Selected stockers	7.45@ 7.85
Plain to fair stockers	5.40@ 6.75
Stock calves	5.75@ 8.25
Stock cows	4.50@ 6.50
Stock heifers	5.25@ 7.25
Milch cows	45.00@110.00



Slump in Hog Prices.

Hog prices in the past two weeks fell below 8 cents, and now are near the lowest level since early in February. Compared with two weeks ago prices now are 40 to 50 cents lower. This decline is about in line with the usual late October and early November price movement. In November last year the top price was $8, and this year November thus far has uncovered a top of $7.95. In all the markets some specialties, and selected shipping hogs are making $8 and better, the top Monday in Chicago going to $8.20, and in St. Louis to

Detroit Kerosene Engine

Saves Time, Trouble, Expense

The Detroit Kerosene Engine is the simplest and most powerful engine you ever saw or heard of. Direct transmission of power with 3 moving parts only—no useless cams, gears or valves to take up power or get out of order. No trouble—no extra expense. Starts without cranking.

Runs on Cheap Kerosene

Will run on distillate and gasoline but kerosene costs less than half as much as gasoline. Besides, kerosene contains more heat units than gasoline. Result—more power, steadier power—at one half the expense of fuel. Comes to you all ready to run feed grinders, separators, pumps, saws, electric light plants etc. All sizes in stock ready to ship.

GUARANTEED 5 YEARS—Sent on trial direct from our factory at lowest factory prices. Don't buy an engine until you have seen the "Detroit." Write today for catalog and agent's special introductory price on first order from your territory. 1483

1392 A. STOCK FARM

in Cen. Tex. Good per cent til. Conveniently located; well improved. 110 a. cul. Plenty water. Stock go through winter on range. $13. Terms.
W. T. Ingram, Lampasas, Tex. Str. Rte.

LAND AND OTHER PROPERTY FOR JACKS AND JENNETS.

Or for sale; 102 acres good land in Chariton County, Mo., splendid residence in best part of Chillicothe, Mo.; five passenger Overland automobile in good condition. Also several head of good registered Percheron mares, bred to imported stallion. Address,
D. B. KIRBY, Grain Valley Mo., or LOUIS H. GOULD, Greenville, Texas.

160 ACRE FARM FOR SALE.

I have moved to town to take up the breeding business exclusively and will sell my farm located 4½ miles from town of two railroads, Missouri Pacific and Atchison, Topeka & Santa Fe. All bottom land; black sandy loam. Spring creek passes through middle of farm; two wells of good water in abundance; 40 acres in alfalfa, fenced hog tight; every acre first class alfalfa land; 8 room house; large cellar; good orchard; grade school; school wagon run by district. Two story barn with basement; lots of grain room; big hedge on outside lines. Farm well arranged for two 80 acre homes, or 240 acres of cheap upland pasture may be had in connection, making an ideal stock farm. Price, $10,000 if sold soon. Will carry $3,500 at six per cent. Address.

H. H. BURNS.
Argonia, Sumner County, Kansas.

Alfalfa As a Money Maker

Rich alluvial soil is what is wanted for the successful growing of Alfalfa, the king of forage crops. The Red River Valley has this kind of soil in abundance—nothing better anywhere. We can recommend this land to well-to-do farmers who want something really good. Ample rainfall.

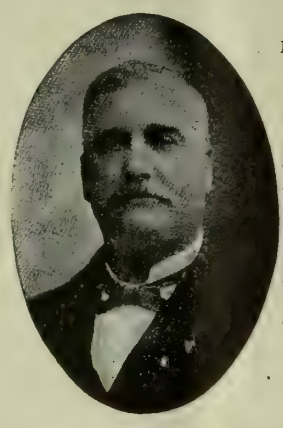
WORM TROUBLE IN HORSES

Strikes at the Most Valuable Section of Your Live Stock

A Proven Remedy Should Be Used at Once

From Horses to Hogs, experience with all animals has shown that there is no Worm Destroyer and General Conditioner equal to



Dr. Lion's Stock Remedy

From B. L. Robinson, Breeder of Percheron Horses, Short Horn Cattle, Poland China Hogs, and Shropshire Sheep:

"After spending hundreds of dollars for stock foods I concluded to try the Lion's Remedy and am satisfied it has no equal as a worm killer and conditioner for all kinds of stock. I like the Lion's Imported Dip equally as well.

B. L. ROBINSON,
"Unionville Center, Ohio."

From L. M. Monsees, Head of one of the World's Greatest Jack and Jennet Breeding Firms.

"We have used and relied on Lion's Remedy among our jacks and jennets, and we find that it meets with all the requirements and we consider this preparation just as staple as the best grades of sugar and coffee, and a trial will convince any stockman that it contains all the merits and quality claimed for it.

"L. M. MONSEES,
"Smithton, Mo."

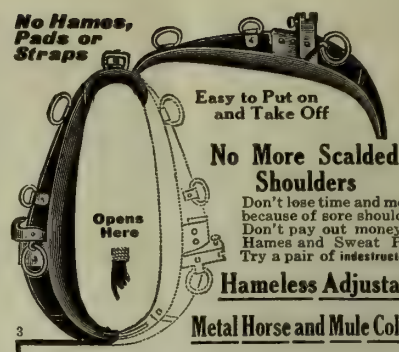
From John Q. Harrison, One of Illinois' Best Farmers and Stock Growers, Owner of Onward Medium:

"Enclosed find draft in payment of 200 pounds of Lion's Worm Powders and a case of your Lion's Imported Dip. Hurry the shipment all you can, as I am needing it. I find for quick and sure results as a worm destroyer, Lion's Remedy is just the thing, and to relieve stock of lice, put their coats and skin in good condition, your Imported Dip is far superior to any of the several kinds I have used.

"JOHN Q. HARRISON,
"Pleasant Plains, Ill."

From Geo. T. McGowan. In the Express Company's Stables He Keeps 130 Horses and Thoroughly Tested the Remedy Before Offering it For Sale.

"We find the Lion's Stock Remedy a splendid seller, especially among the better class of horsemen here in St. Louis. The use of it on our stock has thoroughly convinced us of its merits. We feel sure the time is coming when it will be found in the stables of all first class horsemen in the city of St. Louis.



"NATIONAL HAY & GRAIN CO.,
"Per Geo. T. McGowan, St. Louis, Mo.
"Manager Adams Express Co. Stables."

We can show you a book full of letters, just as good as these, proving the superiority of this Time Tried Remedy for Horses, Cattle, Hogs, Sheep and Poultry. But if you have a horse that is "out of fix" a can of the Remedy ordered at once will save you time and feed, and maybe a horse.

Write us for Catalog of the Remedy, Guaranteed Imported Dip, Dipping Tanks and Sprayers.

No Hames, Pads or Straps

No More Scalded Shoulders

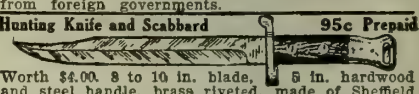
Don't lose time and money because of sore shoulders. Don't pay out money for Hames and Sweat Pads. Try a pair of indestructible

Hameless Adjustable Metal Horse and Mule Collars

Endorsed by veterinaries and men of high authority. A. F. DeLaune, St. Thomas Plantation, Albemarle, La., writes: "Send me forty steel collars."

Think what that means to the horse owner. Think of the time saved—money saved and suffering saved the mules. Think of the extra work you could do with a collar that insures against galls and sore shoulders. Be humane, progressive and up-to-date and save money by using

Indestructible Collars



and you'll be free from sore shoulder troubles. The metal won't permit the sweat to scald and produce a sore. Being adjustable they fit the neck and bring the draft to correct point. Durable—last a lifetime. The ideal work horse and mule collar. Be sure and test out this great Twentieth Century invention—100,000 in successful use. Good Agents Wanted. Manufactured by

Johnston-Slocum Co., 933 State St, Caro, Michigan

U. S. ARMY AND NAVY GOODS

We are the largest dealers in U. S. Army and Navy goods in the world. When Uncle Sam buys more goods than he needs he sells them to us for a mere fraction of their cost. In this way we come in possession of thousands of bargains which we offer you. We also buy many goods from foreign governments.

Hunting Knife and Scabbard 95c Prepaid

Worth $4.00. 8 to 10 in. blade, 5 in. hardwood and steel handle, brass riveted, made of Sheffield steel, the finest tempered steel in the world. Ground to razor edge that will hold indefinitely. These sword knives were recently discarded by the English government. Makes the finest kind of hunting knife or for trimming hedges, cutting corn or cane, or as a butcher knife. Prepaid, 95c.

U. S. Army Blankets $4.95 5.45 prepaid

We have sold many car loads of these blankets. They are the greatest values in the world, without exception. BRAND NEW, full 72x90 inches (6x7½ feet). All pure wool, ¾ OF WHICH IS BLOOD WOOL; color, bluish-gray or army tan; striped borders, U. S. ensign beautifully done in center. Weight full 5 pounds. Order from this ad and receive the greatest bargain you ever saw.

Highest Quality Boot Made.
Elk Hide, Cork Welt, Two Full Soles, only $5.95

NO. 15376. THE HIGHEST QUALITY GENUINE CHROME TANNED ELK SKIN HIGH CUT EVER MADE. The genuine Goodyear welt hand-sewed soles on this boot are of the finest white oak tanned leather, and are reinforced with the new cork welt feature, which excludes the water and keeps the foot warm and dry. Money and skill can not produce a better article than this, and on this special contract we are enabled to offer you a big saving. This is the best shooting boot, and is almost indespensable for the man out of doors. Order quick, as this lot will sell quickly. Sporting Goods Houses get $10.00 per pair, 17 inches high. Men's sizes, 6 to 11. Price, only $5.95.

U. S. GOVERNMENT OVERCOAT $2.95
Brand New Coat, Worth $25.00

This is the Regulation U. S. Government Army Overcoat; Navy blue. This is the biggest overcoat bargain you ever saw and is positively worth $25.00. This is one of the luckiest purchases we ever made and we expect every man who reads this ad to order.

$30 Beaumont Repeating Army Rifle $2.95

This is a marvelous bargain. A 5-shot, hammerless, repeating army rifle, guaranteed to be in perfect working order; made under government supervision. The most accurate rifle made. Magazine under barre holds five cartridges. Only three movements to load and fire. Equipped with adjustable, long range lift sight; length from butt to muzzle 50 inches; shoots 48 caliber cartridges and can be used as a shotgun. Only a limited quantity of these guns left, so be sure to order today at this ridiculously low price, $2.95.

Send for "Book of A Thousand Bargains," describing hundreds of other wonderful bargains in Government Goods and General Merchandise. Free upon request.

Cal Hirsch & Sons U. S. Dept. 212 St. Louis, Mo.

$8.10. Some serum hogs in Kansas City sold at $8. Packers are buying the bulk of their hogs at $7.50 to $7.75. Heavy weight hogs are bringing a premium over both the light and medium weight kinds. There is a large movement of hogs half fat, direct from grass. Many farmers will market their hogs in November as they will be out of corn by that time. After December the supply will be short.

The following table shows the range in hog prices in the last two weeks of April:

		Preceding Week.
Mon., Oct. 27	$7.50@7.90	$7.80@8.25
Tuesday	7.50@7.90	7.60@8.10
Wednesday	7.55@7.95	7.50@7.90
Thursday	7.60@7.95	7.60@8.00
Friday	7.55@7.90	7.40@7.90
Saturday	7.45@7.85	7.50@7.90
Mon., Nov. 3	7.40@7.90	.....

The following quotations are for hogs on April 16:

Choice, 250@300 lbs.	$7.70@7.90
Choice, 200@245 lbs.	7.60@7.85
Medium weight	7.50@7.80
Light weight	7.25@7.70
Common to fair	7.00@7.25
Stags	6.25@7.50
Pigs	4.00@5.25
Bulk of sales	7.60@7.85

Boost in Sheep Prices.

Though receipts of sheep at Western markets appear liberal there has been a large per cent of feeding lambs on through billing and the total supply on sale was not large for this season of the year. Prices have advanced 50 to 75 cents on lambs, and 50 cents on sheep. The big range movement is over. Flocks have been turned to winter quarters and the big mountain ranges are covered with snow. Fewer sheep have gone to feed lots than usual and with the let up in the range movement a period of short supplies is at hand. Choice fat lambs are quoted at $7.50 to $7.90, fair to good, $7 to $7.50; yearlings, $4.75 to $5.75; ewes, $4.25 to $4.85, and wethers, 4.50 to $5.25. Feeding lambs are quoted at $6 to $6.60.

October Live Stock Receipts.

In October receipts of cattle at all the Western markets were short of the same month last year. This, notwithstanding the fact that supplies were drawn from a larger area than ever before, was a general supply. St. Louis, Kansas City and Omaha were the greatest losers but they were in the zone where the movement was heaviest in September. Last month the five Western markets received 865,625 cattle, compared with 1,078,800 in October, 1912. A decrease of 213,175. Chicago, with an increase of 119,300 hogs, was the only point that reported an increase. The five Western markets together received 1,200,975 hogs, or 18,175 fewer than in October, 1912. The five points reported a decrease of 85,000 sheep.

In the first ten months this year the combined receipts of cattle at the five Western markets were 6,442,525, hogs 13,724,775, sheep 10,783,550, a decrease of 143,175 cattle, 454,325 hogs and 83,800 sheep, compared with tne ten months in 1912.

QUESTIONS AND ANSWERS.

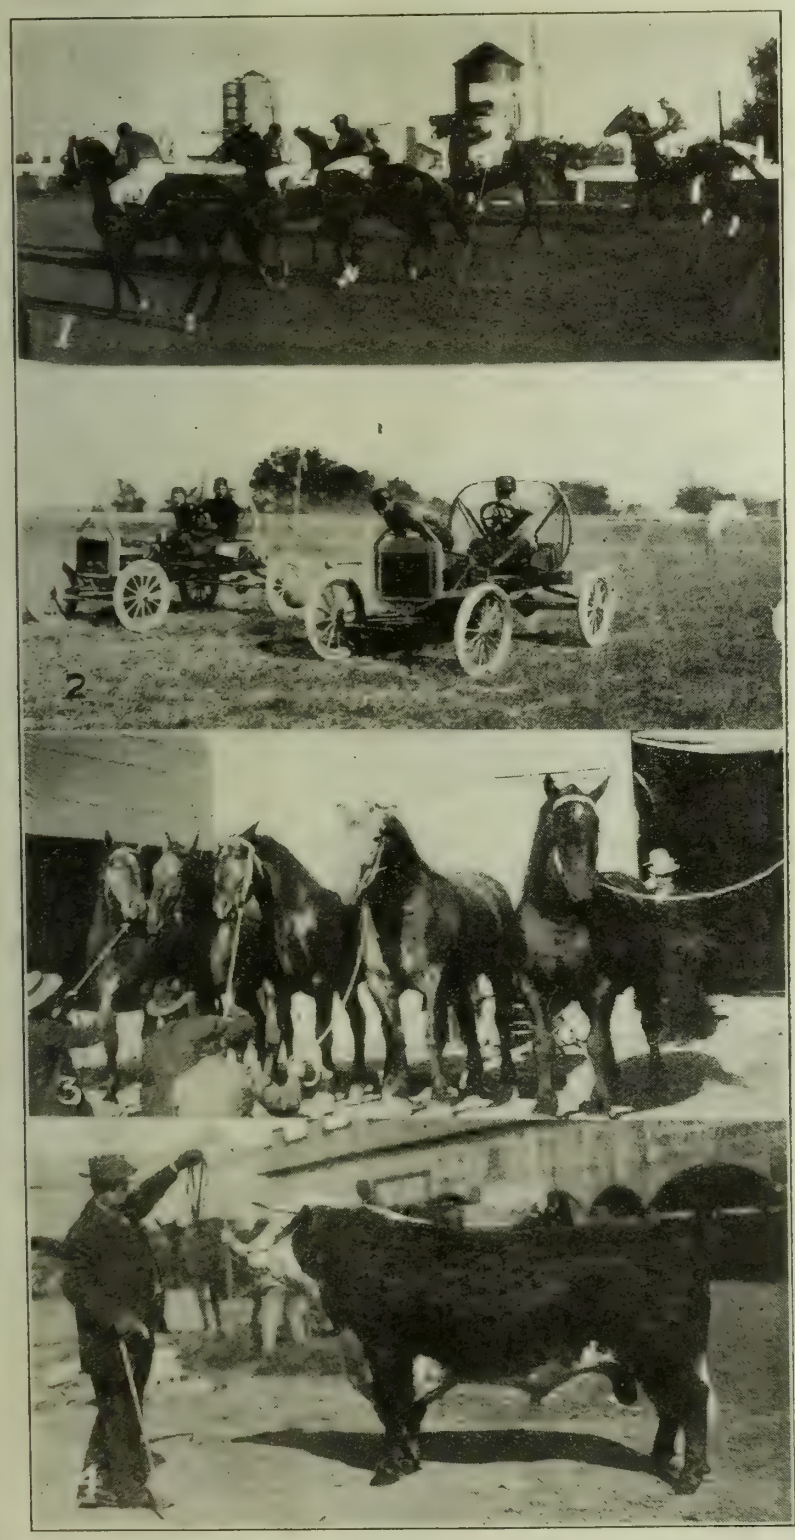
(Continued from page 4).

thigh. They were about the size of your finger end and came out like warts. They kept getting more and more. I got a veterinarian to look at them and he pronounced it "farcy." The state inspector brought a graduate veterinarian and took some of his blood and sent it to Manhattan to be tested. The report came back no blood infection. I tried everything, but he still got worse and sent for state inspector and veterinarian to give malein test. But nothing doing. Some say jack sores. This last month or six weeks several lumps came on his bag. When I found out he had nothing contagious. I bred my own mares and several outsiders. The one leg is one continuous sore. The jack is young, 15½ hands and a good breeder. I don't know what jack sores are only what the flies put on them in summer time. Any information you can give me regarding this matter will be greatly appreciated.—Kansas Subscriber.

REPLY—Your description sounds very much as though your jack was

suffering from a local infection induced by the yeast fungi and we would suggest that you have your state veterinarian or some graduate carefully open one of these nodules and if pus is found therein to carefully examine the same under a microscope for the purpose of noting whether or not such fungi are present. We do not think your jack is affected with what is usually recognized as "jack sores," but fear it is even worse.

575—DISCHARGE FROM VAGINA—Will you please advise me what the trouble is with a pony mare I bred to my stallion. She was bred on January 23, 1913, one time only and is showing heavy in foal. About two months ago she had a scant discharge from vagina and since then discharge is increasing until tail and quarters are covered with the discharge. The mare is in good flesh; running on grass and is apparently in good health otherwise; is 12 years old; been bred to jacks and stallions several years without results until this time. Any information you can give will be greatly appreciated.—Texas Subscriber.



REPLY—Occasionally cases are met with wherein a catarrhal state of the vagina becomes established and continues throughout the period of gestation. Again cases have been found wherein the same condition extended to the uterus without sufficient involvement of the attached membranes to loosen them sufficiently to cause an abortion. We do not think it wise to attempt anything by way of local treatment such as irrigations in the event there is any assurance that the mare is still in foal. Again it is not likely that internal medicine will help, keep the mare where she will not be abused or excited by other stock.

576—LOUSY JACKS—My jacks are always lousy in a frame barn. How can I get rid of the lice? I have been washing one jack with creosote dip every four or five days. The nits are thick on this jack and he is getting poor. We have a stone barn and nothing seems to get lousy in there. Please let me know your best plan to get rid of these lice.—Kansas Subscriber.

REPLY—Look up the last number of the American Breeder relative to a similar inquiry. You will find the kerosene emulsions one of the safest and most effective agents you can apply. Give your barn a thorough cleaning up and destroy all litter with fire. Whitewash the interior of the barn with a thin whitewash containing two ounces of creoline to every gallon of whitewash. Apply with a spray pump if possible. Use the same agent (creolin in water) and thoroughly spray the floors. You will find it necessary to repeat this once or twice in order to rid the barn of these pests.

577—BREEDING QUESTIONS — I bred a mare last June who steadily refused the horse until latter part of August, then she came in heat again. She threw off matter like a mare does after her colt is born. I failed to find that she had aborted or discharged any fetus of an unborn colt. I put my hand into her and found the cervix very hard, stiff and thick, which subsided in a few days. I bred her and she came in heat the next period and I bred her again. She aborted three years ago, but raised a colt last year. Also she came in heat in June two years ago and did not show any signs again until September, when I bred her and she conceived. Could she have aborted? When mares come in heat after being in foal, is the cervix open or closed? My neighbor has two mares that aborted three years ago, then raised a pair of mules, and then aborted this year. Was it dangerous for me to allow my horse to breed them? The apparent reason for abortion was lack of care.—Colorado Subscriber.

REPLY—It is never good practice to breed any mare having an unhealthy discharge from the vagina, especially directly to the stallion. These practices only help to promote genital diseases of the type you mention on account of the liability to convey them through the act of coition. Abortion may take place at so early a period during gestation that it may escape one's notice. During estrum the cervix is ordinarily relaxed, but we have met with cases during such period wherein it was very dense and rigid, but this is the exception. In the future avoid breeding unhealthy mares by natural service. When thought to be fit for breeding employ the capsule in such cases. This method increases the probabilities of conception and lessens the danger of infection of the horse.

At the Texas State Fair, Dallas

1—Thoroughbreds "coming up to the scratch" for the six-furlong dash in which the rider of the nearest horse (Number 5) was almost killed by the falling of his mount and the trampling of the horses behind. 2—Auto-polo; it takes a swift photographer as well as a fast machine, to get one of these photos without being run over. 3—J. H. Jackson's first prize group of Percheron stallions. 4—Wm. Henn showing a good Hereford.

THE RIGHT WAY

IN ALL CASES OF DISTEMPER, PINKEYE, INFLUENZA, COLDS, ETC., of all Horses, Jacks, Mules, Brood Mares, Colts, Stallions, is to

SPOHN THEM

On their tongues or in the feed put Spohn's Liquid Compound. Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the disease germs. It wards off the trouble no matter how they are "exposed." Absolutely free from anything injurious. A child can safely take it

50 cents and $1.00; $5.00 and $10.00 the dozen. Sold by druggists, harness dealers, or sent, express paid, by the manufacturers.

Special Agents Wanted.

VISIO Remedy Ass'n. 2477 Calumet Ave., Chicago, Ill.

HORSE AND CATTLE BREEDING SCHOOL

November 10 to 22

The cattle breeding school, beginning November 10, and ending November 15, may be the only cattle breeding school for a year. This depends on the attendance at the next term. Those expecting to attend the cattle and hog sessions should be on hand at the next term. The instruction in cattle breeding will be valuable for all breeders. No man owning a few good cows, or expecting to engage in the business can spend a week and a little cash to a better advantage. The fine prospects for cattle breeders should encourage every one to prepare to reap the greatest benefit with the least expense. The average cattle breeder knows very little about the subjects to be taught; they have been sadly neglected.

The best instructors on horse, cattle and hog breeding are employed at this school. Everything necessary for a breeder to know in his business will be thoroughly taught, and in plain language that the average breeder can understand. Every breeder will be expected to take part in the practical work on living and dead animals, such as dissecting and diagnosing conditions. No books necessary. Everything furnished.

Read These Letters—Every One a New One and Straight to the Point.

Oct. 27, 1913. I am well pleased with what I learned at the Scientific Breeding School. I think it would pay any mare owner to attend the school, much more the stallion owners. The people in my vicinity think quite differently of the scientific breeding from what they did a year ago. I bred last year 184 mares; 24 of these mares I have not heard from; 100 of these mares I collected season from; 60 mares reported no colts. I don't know how many of these mares lost their colts, but I know some of them did. This year I bred 350 mares with more breeding stock close to me than ever before. I think people in my community will take better care of their mares hereafter than ever before, as they have begun to think it is their own fault if they don't get colts. One man bred 12 mares and got 11 colts.—J. T. Watson, New London, Mo.

Oct. 28, 1913. It is now four years since I attended your school and I have never regretted the time nor money spent there.—Jas. A. Tweedie, Cedar City, Utah.

Oct. 29, 1913. As to the breeding school, I think there is nothing like it myself, and most of my neighbors think the same thing. They are ready to bet their last dollar that I can get any mare in foal, and I can say to any friend that it is good money well spent to attend the school. Wishing all success.—W. J. Helms, Ellis, Kans.

Oct. 29, 1913. Any man that owns a stallion or jack or is breeding mares will be greatly benefited by attending the Scientific Breeding School. In fact, I do not see how any one who is in the horse business can afford not to attend, as what he will learn there at one session will repay him many times over for what it will cost him. I have been in the breeding business all my life and I would not take many times over what it cost me for what I learned and I still expect to attend your school.—D. O. Orr, Topeka, Kans.

Oct. 29, 1913. I attended your third, fifth and part of your seventh term of school. I think every stallion and jack owner, as well as mare owners, would be greatly benefited if they would attend your school. I am well pleased with what I learned. I have used the capsules on mares and jennets and have mules, jacks, jennets and horse colts to show. Have a capsule jack in service and a capsule jack colt from him. I think it would be profitable for any one raising stock to attend the Graham Scientific Breeding School. I have made a bigger per cent with capsules than with natural service. —G. B. Weaver, Harrisonville, Mo.

Oct. 28, 1913. The Graham Scientific Breeding School is the proper thing for horsemen and it is strange that any horse man will try to get along without it. We old graduates could learn much more if we could attend the school again. Last year we bred 13 of our own mares and they dropped 14 foals. Out of 35 outside mares only one showed up that we had to pass as a failure for lack of diagnosis. She was out of condition in many ways. It seems all we know is from the school.—N. P. Mayhew, Cody, Neb.

Oct. 28, 1913. Being on the road all the time in the interest of the Trumans' Pioneer Stud Farm of Bushnell, Ill., I naturally come in contact with all the stallion men of the State of Indiana. Have been a subscriber since the Stallion and Jack News started and was in the first class that graduated from the Graham Scientific Breeding School. My warmest friends in the state are among those that I have persuaded to subscribe for the American Breeder and to attend the Scientific Breeding School. Prior to this season I have operated a breeding barn for years. Since the installing of the artificial method, my trade has continually grown. Barren mares were brought from a greater distance each year, which speaks itself for my success. No up to date breeder can ever afford to put up longer with the old methods.—J. A. Hart, Frankfort, Ind.

Oct. 28, 1913. Any student that attends the Scientific Breeding School and fails to get value received is certainly a dull scholar. I attended one of the early sessions, then returned later to another and have always been well satisfied with results. Although all the principles advocated at the school were not new to me (as I have been in the breeding business more or less for the past thirty years), yet I obtained information in addition which well repaid me for my time and expense. I would suggest that no matter how long a man has handled stallions, he will be able to derive benefit from attending the Graham Scientific Breeding School.—Owen L. Fitch, Barry, Ill.

Oct. 23, 1913. I have been breeding with the capsule system for the past three years and find it very successful. Every breeder should attend your school.—W. B. Emison, Wellington, Mo.

Oct. 25, 1913. I was one of the class (number three) the first season of the Graham Scientific Breeding School. I had been in the business for over thirty years, but learned more in the one week I was at the school than with all my practice, it being the old way our fathers did. I had a lot of men who did not believe in capsules the first year, but prefer them now. I go every season to attend as many classes as I can and intend to spend a whole week again this winter. I advise all breeders to come to the school; they will be more than paid for their time.—W. W. Anderson, Wilder, Kans.

Oct. 23, 1913. I attended the Graham Scientific Breeding School four years ago for the first time, also two years ago and intend to be there this winter. I think I have done a great work for the barren mare owners and in a short time I will not be troubled with this kind of mares. Scientific breeding is a pleasure as you take more interest in your work and the mare owners take more interest in you. I would not think of going back to the old way.—Otto Westerman, Herkimer, Kans.

Oct. 23, 1913. Will say I think it is very bad practice for any one who expects to follow the breeding business to be without this knowledge that he gets in your school. It has proven a very profitable investment for me in my work and I feel that any man is a total failure without this training. I have made a success with the artificial methods and cannot recommend it too highly. Any mare owner can well afford to attend this School. Absolutely every man will be a success if he will but try.—H. M. Justice, Stilwell, Kans.

Oct. 24, 1913. I attended your school in December, 1909, and was well pleased with the benefits of such school. While I am not doing much in public breeding of late, I have always been glad I attended your school.—G. E. Norwood, St. Michael, Neb.

Oct. 24, 1913. I wish everybody thought as much of the Graham Scientific Breeding School as I do. I have been breeding that way for four years and can say there is a great improvement in the health of the mares, and I don't think there are but a few but what are well pleased with the capsules. I know it will pay any breeder to attend the school.—N. S. Cox, Pattonsburg, Mo.

Oct. 24, 1913. The Graham Scientific Breeding School is to breeders as important as are other institutions of learning to those who desire to be qualified to enter other professions. After years of practical experience as a breeder and practice in the use of scientific appliances in which I had been reasonably successful, I attended the third class in the School at Kansas City, and learned many important points I could not have gotten otherwise. I have made failures that I could not account for, as everything seemed favorable to succeed. I soon learned the cause when we got the instruction to be had. —O. T. Muzzy, Carlisle, Ark.

Oct. 27, 1913. I have attended the Graham Breeding School one term, but in the words of Chas. Bull I am a "Thoroughbred" for Graham's School. Practically all I know I got while in this school in February. I love the School for its teachings, brotherly kindness and good times, good exercises, good morals and Christian influence all the time. Our lectures were from the best men. I am billed for another term.—H. E. Kerr, Lyndon, Kans.

Oct. 27, 1913. I attended the Graham Scientific Breeding School in December, 1909. It was money well invested for me. I have derived many times the cost in the practical business. A man receives more information in one course of the school than he could ever find out by only practicing. I would advise any one in the horse business to attend a course of the school. —Wm. Raetz, Junction City, Kans.

Oct. 24, 1913. People are falling in line with scientific breeding and are calling for it more each year. I can cheerfully recommend your breeding school to every breeder. I learned more in one week there than I had learned in 20 years' exprience.—A. J. Dunaway, Chilhowee, Mo.

The tuition fee is $25 for one or both courses. This entitles the student to return at as many terms as he cares to without further cost. The school is guaranteed to be perfectly satisfactory to the student or his tuition fee will be refunded; he alone is to be the judge. At both courses the work will begin every morning at 7:30 and last until 10:30 at night.

TRUMANS'
IMPORTED SHIRE MARE AUCTION

BUSHNELL, ILL.

Thursday, Dec. 11th, 1913

35---IMPORTED SHIRE MARES---35

The leading studs of England are represented in this offering, which will include:

Tatton Aurora, the Grand Champion Mare at Iowa, Indiana and Illinois State Fairs. First Prize two and three year old Fillies and the Champion Mare at Minnesota State Fair of 1913.

Woodperry Locket, the most sensational first prize winner at the English Shows this year;

International winners of 1912 and 1913; in fact all our Show Mares.

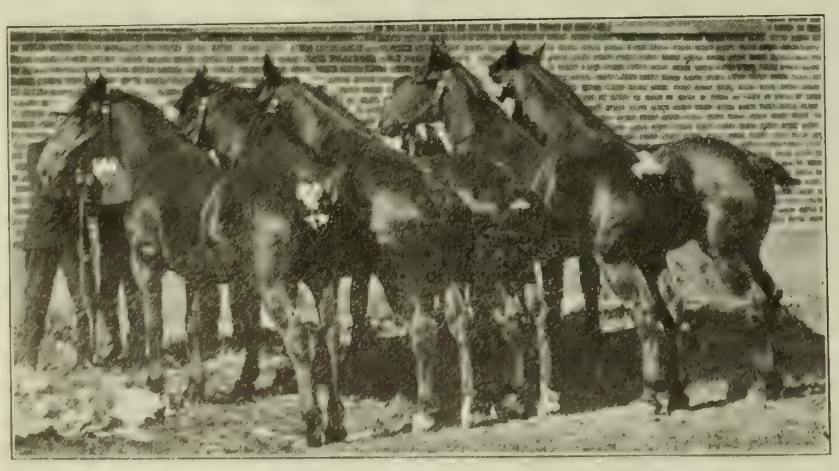
Come to Bushnell, the Greatest Draft Horse center in the World.

Sale will commence promptly at noon. Write for catalogues and other information, mentioning the American Breeder.

Trumans' Pioneer Stud Farm Bushnell, Illinois

THE GREATEST SALE

of the season for the opportunity it offers to



Buy Percherons and Meet the People

you want to know will be the annual sale of

W. S. CORSA AT WHITE HALL, ILL.

When W. S. Corsa, White Hall, Ill., paid $10,000 for the champion Percheron stallion, Carnot, he might reasonably have begun at once advertising the greatest Percheron stallion on the American continent, and he might have bought up as many mare as could probably be bred to this horse and sold them at enormous profits. He did nothing of the sort, but what he did do, was characteristic of himself. He already had a collection of very high class mares, and to these he has added carefully rather than frequently. He made no claims for Carnot as a sire until he had the evidence on his own farm. One of the first of these was the filly, Maude Carnot, which was good enough to sell for $1,000 at weaning time. Last year Mr. Corsa went out with the first full crop of Carnot colts dropped at Gregory Farm and made the leading shows with a success that is perhaps unprecedented. To print the details of his winnings would be a long story in itself. This year only one showing was made—the strongest of the state fairs from a draft horse standpoint. Here a son of Carnot was made grand champion and several other prizes fell to Carnot stallions in the only rings in which they appeared. But by far the most sensational and significant winning of the show came when the Carnot fillies led out for Futurity money. With the strongest showing of Percheron fillies ever made at any state fair, and with the class open for every Percheron stallion in America to have colts in competition, these daughters of Carnot won second, third, fourth, fifth and sixth money, only one filly out of 37 entered being strong enough to break the line. Carnot blood is the feature of Mr. Corsa's annual sales. In this coming sale there will be 40 mares and fillies and 4 or 5 stallions. Many of the females will be sired by Carnot or in foal to him; 10 of the mares are imported as are also some of the stallions. One of the stallions is by Imp. Casino and out of a Carnot dam. You cannot do better than interest yourself and your neighbor in Carnot blood.

At the Big Iowa State Fair, 31 Fillies by some of the Best Percheron Sires in America, stood below these five yearling daughters of Carnot.

Don't fail to write for Catalog

Address a postal or letter to Mr. W. S. Corsa at White Hall, Ill., at once; mention this advertisement and ask him for any information you want. He will be glad to tell you.

Date of Sale Dec. 9

VOLUME 6. KANSAS CITY, NOVEMBER 20, 1913. NUMBER 21.

Buying Market Horses and Mules

Several requests have been made for more information on purchasing feeding prospects for the horse and mule market. In this connection we wish to call attention to the article in the August 5 issue entitled "Fattening Horses and Mules;" also to the article in the September 5 issue entitled "Judging the Age of the Horse by Its Teeth."

A prominent horse buyer once remarked that he had been "picked up" on practically every ailment and disposition known to horses, but that he had not been "skinned" a second time on the same proposition.

An important lesson in purchasing market stock from the public is to learn to judge the one offering the stock for sale. An experienced horse buyer will not often buy an animal from a professional horse trader. There are so many things that might be wrong with an animal that he does not care to take up so much time in making the necessary examinations. A professional horse buyer usually employs the services of some competent man familiar with conditions as well as with the stock where selections are to be made. No matter how careful one may be he is liable to buy an animal with a "hole in it," as the horse buyer expresses it. If the animal is purchased from a good responsible man there is usually less danger. But every purchaser should be on his guard for everything that might be wrong with a horse.

We are preparing this article more for the benefit of beginners. We hope to encourage breeders and farmers to engage in the practice of buying market horses and feeding them for a particular market. Too many thin animals find their way to the market and we hope this article will encourage new beginners to make the start.

In making the examination of a horse the prospective purchaser should stand back a reasonable distance and take a good, careful survey of the animal from a side view; taking plenty of time to carefully form an opinion as to the size, conformation, correct angle of outlines, size of the bone and the body proportionately. Every beast of burden must be well proportioned; he must also have a good middle in order to be a good feeder. The buyer should make a reasonable number of measurements on horses so as to be able to tell the exact height quickly by walking up to the side of the animal and putting his chin over the withers. Some buyers carry a regular measuring stick, as an inch or two in the size of an animal frequently makes a great difference in the price that might be paid. Others make use of a tape measure by taking the heart girth into considera tion; also the bone measurement, so as to be quite sure that the animal is not deceiving in size.

In the purchase of thin animals a considerable study is necessary in order to make a good guess at the future, after an expensive feed has been given. A general survey of the animal and the price should be the ruling factors as to whether a careful examination is necessary or not.

If the buyer thought a deal might be consummated the eyes should be the first careful examination. If not perfectly satisfied that the vision is in perfect working order the horse should be taken into a dark barn, tested and allowed to look toward the light in the door.

If the horse is permitted to stand facing the light it gives a much better opportunity to closely examine the interior of the eye. Beginning cataract is not easily detected without this method of examination. It is shown by a little irregular cloudiness deep within the eye and should not be mistaken for any reflection from any of the wearing apparel of the party conducting the examination. A white collar or shirt front should be obscured for the time by turning up and fastening the collar of the coat. A case of beginning cataract is very liable to result in a very noticeable cloudiness in a few months and will, in the course of time, ordinarily lead to total blindness in the eye involved.

Cases of beginning periodic ophthalmia are usually difficult to detect but inasmuch as this disease affects the entire structures of the eye, it inclines to leave behind as it passes off a slight cloudiness or blue tint to the eye. Following each successive attack this becomes more marked; the eye appears sunken, small or flat, and the blood vessels appear more conspicuous on its surface. The upper lid assumes a wrinkled or drawn appearance with a well defined angle along its border.

Paralysis of the optic nerve causes total blindness without observable alteration of the general appearance of the eye excepting a somewhat enlarged pupil. With this disease the eye is perfectly clear but the size of the opening or pupil is no longer influenced by light.

The hock is a very important part of the anatomy of a horse and is the weakest part of the hind limbs. It is quite unusual to find an ideal hock on a horse. Too often these parts are too small and out of proportion to the rest of the body.

A good hock should be large and clean, thus affording plenty of room for the attachment of the many structures concerned in manipulating it. A tied in hock (small in girth at its lower part) is very objectionable. The hock is put to a very severe strain while moving heavy loads, on account of the peculiar connection of the bone just above to it, and as the animal moves forward the hock is subjected to a decided twisting action. It is the seat of curb, blood and bog spavin, and thoroughpin, besides being the part affected in bone spavin. The latter involves the lower rows of bones and being a bony disease is difficult to cure. These several diseases depend largely upon a faulty conformation at this point for opportunity to make themselves known and one can not be too critical in passing on this important structure, the hock.

The horse should be unhitched and the harness all removed so as to make complete examination. Notice the withers and the poll of the head carefully for scars to see that the animal has not had the poll evil or fistula. It is always well to look for scars anywhere on the animal, and more especially on the legs. The animal may have a habit which these scars will aid in detecting.

Every horse that is broke to work should be driven and given a good tryout in the harness to see whether he is a real work horse or not; stop him and start him with the brakes.

For That Big Subscribers Number December 5

Much of the success which the American Breeder has had in serving its readers has been due to the freedom with which our readers write us on all sorts of subjects. The confidence of subscribers in the reliability of our advice given in our "Question and Answer" department has developed the best department of this kind to be found in any publication in America. The intelligence with which our readers have discussed the questions of general interest in nearly every issue of the paper, has given us hundreds of columns of the most interesting material we have been able to publish. Not only has this spirit of co-operation in the interchange of ideas made the paper better, but it has put thousands of our readers to studying more carefully, and with more success, the many problems which are constantly coming up in their business. One of the important qualities of a thought, once expressed, is its power to engender other thoughts, and thus to be useful to a degree far greater than that due to the mere information which it imparts.

A little over a year ago, in order to provide more than the usual space for letters from subscribers, and to further stimulate this free expression of ideas and experiences, we announced a subscribers' number. But one announcement was made, but before the date came for closing that issue we had on hands more good material than the one issue would contain, and several columns of good letters and articles which were intended for it had to be published in later issues. It was an eye opener, not only to ourselves, but to other publishers and to many others interested in live stock improvement, who commented upon it to us. From Washington to Kentucky, and from Pennsylvania to New Mexico the letters and articles came and the variety of subjects discussed was as wide as the territory heard from. The editors had nothing to do with that issue, but dot the i's and cross the t's, but we were none the less proud for it was the first paper of the kind ever put out by an agricultural publisher.

Now it is another just such paper that we want to put out December 5, only this one is bound to be better as many who will write for it have now had experience. We would be glad to take our chances, however, with an entirely new batch of "editors"—of the kind who subscribe for the American Breeder—for when you get right down to it, it is ideas and knowledge of the subject handled which makes interesting reading, and not mere experience as a writer. That is what we want—the things that you had thought about and had to deal with. Your solution of a difficulty will help another with a similar problem to solve. Your statement of a problem that has got you "stumped" will bring a helpful suggestion from some one else who has overcome such a difficulty. Now just pick out a subject, the more commonplace it may seem, the more real importance it will probably have; get you some good sized sheets of paper so you won't be crowded, and give your fellow readers of the American Breeder a chance to agree or disagree as they like. And the articles are coming, too; many from "first timers," which is a good sign. We are counting on the most interesting batch of contributions by December 1 (the date when we will have to close up) which ever came to an editor's desk. Let them come; your's among the first.

on. Watch the ears carefully to see if they betray any severe nervousness. He should be given a good hard run of a block or two in order to test his wind. After the run the prospective buyer's ear should be placed to his nostril immediately to see what the results of the exertion is. Care should be taken to notice any peculiar movement of the legs after severe exertion; also after the horse has stood a little while watch for string halt, lameness of any kind or crampiness. If there is any suspicion of the animal being lame in any particular he should be left alone for several hours and then quietly slip in and take a look at him after this rest, and before the owner has had an opportunity to move him.

INTERNATIONAL LIVE STOCK JUDGES.

The judges in the departments of horses, cattle, sheep and hogs at the coming International Live Stock Show in Chicago will be as follows:

HORSES.

Clydesdales—Wm. Smith, Columbus, Ontario; James McCurdy, Napinka, Manitoba; James Z. McLay, Janesville, Wis.

Percheron—Prof. C. F. Curtiss, Ames, Ia.; Robert Graham, Toronto, Ontario; Prof. W. B. Richards (referee), Fargo, N. D.

Shire—Prof. C. F. Curtis, Ames, Ia.; Wm. Bell, Wooster, Ohio; A. Latimer Wilson, Creston, Ia.

Belgian—A. Latimer Wilson, Creston, Ia.; James Fletcher, Wayne, Ill.; Milton M. Jones (referee), Williamsville, Ill.

Suffolk-Punch — Richard Stericker, Aurora, Ill.

Draft Horses in Harness—Prof. W. J. Kennedy (singles, pairs and threes), Ames, Ia.; Wm. Bell (singles, pairs and threes), Wooster, Ohio; Robert Graham (singles, pairs and threes), Toronto, Ontario; Prof. C. F. Curtiss (fours and sixes), Ames, Ia.

Carload Cattle Championships—I. F. Brown, Union Stock Yards, Chicago, Ill.; Thomas Murray, Union Stock Yards, Chicago, Ill.; James Brown, (referee), Union Stock Yards, Chicago, Ill.

Steers Entered for Slaughter—John Gosling, Kansas City, Mo.

Carcass Cattle—Samuel T. White, Chicago, Ill.

SHEEP.

Shropshires—J. C. Duncan (breeding classes), Lewiston, N. Y.; David McKay (fat classes), Ft. Wayne, Ind.

Hampshires—James McLay (breeding and fat classes), Laramie, Wyo.

Southdowns—H. L. Compton (breeding and fat classes), Burgin, Ky.

Oxford-Downs — J. C. Williamson, (breeding and fat classes), Xenia, O.

Lincolns—Graham Walker (breeding and fat classes), Chazy, N. Y.

Cotswolds—F. Poirson (breeding and fat classes), Ft. Wayne, Ind.

Dorsets—James McLay (breeding and fat classes), Laramie, Wyo.

Cheviots—F. E. Dawley (breeding classes), Fayetteville, N. Y.; David McKay (fat classes), Ft. Wayne, Ind.

Leicesters—A. J. McKay (breeding and fat classes), Mac Donald, Manitoba.

Rambouillets (Breeding and Fat Classes)—W. H. Cole, Spring Grove, Ill.; John E. Webb, Southport, Ind.; E. L. Davis, Flint, Mich.

Romneys—James McKaye (breeding), Laramie, Wyo.

Grade and Cross Breeds and Champion—David McKay, Ft. Wayne, Ind.

Carload Sheep—R. S. Mathison, Union Stock Yards, Chicago, Ill.

Carcass Sheep—David Pfaelzerr Union Stock Yards, Chicago, Ill.

SWINE.

Berkshire—F. A. Scott (breeding and fat classes), Belleville, Ill.

Poland-China—S. P. Chiles (breeding classes), Jefferson, Kas.; J. M. Kemp (fat classes), Kenny, Ill.

Duroc-Jersey—W. T. Harris (breeding and fat classes), Morganfield, Ky.

Hampshire—Chas. Marker (breeding classes), Tolono, Ill.; Harry O. Booth (fat classes), Chicago, Ill.

Chester White—W. A. Hoover (breeding and fat classes), Oskaloosa, Ia.

Tamworth—Q. I. Simpson (breeding and fat classes), Palmer, Ill.

Yorkshire—Prof. George E. Day (breeding and fat classes), Guelph, Ontario.

Grade and Cross Bred and Champion—Prof. W. L. Carlyle, Moscow, Idaho.

Carload Swine—Felix Gehrman, Chicago, Ill.

Carcass Swine—Prof. D. A. Gaumnitz, University Farm, St. Paul, Minn.

CATTLE.

Short Horns (Breeding and Fat Cattle)—T. E. Robson, London, Ontario; Frank Brown, Carlton, Ore.; H. M. Kirkham (referee), London, England.

Aberdeen-Angus (Breeding and Fat Classes)—A. C. Binnie, Alta, Ia.; H. M. Brown, Hillsboro, Ohio; S. E. Lantz, Congerville, Ill.

Herefords (Breeding and Fat Classes)—J. E. Robbins, Horace, Ind.

Red Polled (Breeding and Fat Classes)—F. Wherle, Alexandria, S. D.

Galloways (Breeding and Fat Classes)—Robert Lorimer, Evanston, Ill.

Polled Durhams (Breeding Classes)—F. W. Van Natta, Fowler, Ind.

Grade and Cross Breeds and Champion Steers—J. R. Campbell, Shinness by Lairg, Sutherland, Scotland.

Carload Fat Classes—(Yearlings)—I. F. Brown, Union Stock Yards, Chicago, Ill.

Carload Fat Classes (2 and 3-Year-Olds)—Thomas Murray, Union Stock Yards, Chicago, Ill.

Short Fed Specials—Harry Schirding, Petersburg, Ill.

Carload Feeder Cattle — Harry Schirding, Petersburg, Ill.

PARTNERSHIP FARMING.

To the American Breeder: Answering the inquiry of J. T. W. of North Dakota, I will suggest the following:

The customary division between landlord and tenant in this part of the country is land and permanent improvements against labor and everything else half and half. That is, the farm owner puts up the land and maintains at his own expense all the permanent improvements The tenant furnishes all labor necessary to carry on the farm work. From this point on each party bears half the expense. That is, each has a half interest in all work stock, machinery, crops and stock kept for profit, as feeding cattle, sheep, hogs, etc. The oringal purchase price of stock and equipment, cost of maintenance and profits are divided half and half.

Not infrequently a tenant is not able to put up the cash to purchase his half of equipment, stock, etc. In this case it is customary for the land owner to furnish the cash and charge the tenant an agreed upon rate of interest.

In some cases the landlord is willing to do a little better by the tenant, and in this case he generally furnishes the movable equipment, such as work stock and machinery. From this point on each party to the contract divides cost and profit, half and half.—D. H. Doane, Department of Farm Management, Missouri College of Agriculture

Editor's Note:—The inquiry, which was published recently, we reproduce below, for reference in connection with Prof. Doane's reply:

A. and B. plan to form a partnership in farming and hog raising. A. owns land, horses, machinery, seeds, feed for one year and the breeding stock. B. is to do all the work and to have 150 acres of cultivated land and the pigs under his management.

They aim to raise oats, corn, barley for seed and feed, winter rye, rape and clover or alfalfa for pasture.

What would be a fair division of profits on three year basis?

Would it be better if B. purchased horses and machinery from A. and pay for same out of future profits? If so, state how profits should be divided.

GROWING COTTONLESS COTTONWOODS.

To the American Breeder: —Select the best form of cottonwood trees which may be found in the neighborhood and one which is known to be staminate, or not cotton bearing. Take cuttings from any sprouts from this tree or from the new growths from any portion of the tree before the leaves come out. Make the cuttings from eight to twelve inches in length and set them slanting in a furrow in good garden soil which can be irrigated. Set the cuttings so that only about two inches of the upper end are above the surface. Irrigate and cultivate throughout the growing season.

During the first season they should make small trees two to four feet in height. If larger trees are desired they can be left two years in the nursery row, when they will be of suitable size for planting out in permanent situations.—B. O. Longyear, Colorado Agricultural College.

Questions and Answers.

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problms of on reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

FEEDING WHEAT AND CORN—I would like to inquire as to the feeding value of wheat and corn for horses' feed. Wheat and corn are now selling for about the same. Which is the best way to feed wheat, crack it or soak it?—Missouri Subscriber.

REPLY—Wheat makes a valuable feed for nearly all kinds of stock and we would ordinarily prefer to have it ground rather than feed it soaked. Care should be exercised at first in not feeding too generously, as it is capable of producing dangerous forms of colic and laminitis. Equal parts of coarsely ground corn with more finely ground wheat would make an excellent work ration for horses.

LAME MARE—I have a brown mare that was 14 years old last spring that has a colt about seven months old, and has been running in the pasture all summer. About three weeks ago I noticed her being a little stiff and she has been getting worse all the time. When she went faster than a walk she would run sideways. There doesn't seem to be any swelling any place on her body, as I can find. Her left front knee is stiff and she can hardly bend it at all, and there is a little jerk in her shoulder when she walks. Her left hind leg is quite stiff, too. Can you tell me what to do for it? I have been bathing it with salt water.—Colorado Subscriber.

REPLY—If the knee is found to be stiff upon bending it, and is painful when manipulating it, it is quite likely that the entire train of symptoms described are dependent upon an injury to these parts. Apply a vesicant to the knee, rubbing it in well with the hand for several minutes. Permit the application to remain on for 24 hours, keeping the animal's head tied up sufficiently high so she can not reach the parts with her nose. At the end of 24 hours wash the vesicant off with warm water and soap and when the parts are dry apply a little olive oil for a few days. The following will serve as a vesicant: Powdered cantharides, one ounce; vaseline four ounces. Mix well together and apply as directed.

LUMP, NAVEL REGION—I have a little mare colt that has a lump at the navel cord about the size of a hen egg. What would be good to make it go down. The colt is in good shape and is still running with its mother.—Colorado Subscriber.

REPLY—A careful examination may disclose an umbilical hernia at the point mentioned which would have to be corrected by a competent veterinary surgeon. A mere enlargement would very likely yield to daily painting of tincture of iodine.

BOG SPAVIN—I have a valuable road horse five years old, which I think has a bog spavin. The horse is not lame. If there is any cure I wish you would advise me what to do.—Illinois Subscriber.

REPLY—Bog spavin is not often successfully treated from the viewpoint of removing the enlargement, and inasmuch as this animal is not lame, no doubt the enlargement is the thing you are anxious to get rid of. If the animal is not lame at present it is perhaps just as well to let well enough alone, for the probabilities are that you can not remove the enlargement by any method of treatment to that point where it would not be objected to.

INJURED LIMB—I have a young mare, highly bred. In some way before I got her she was injured in hind leg. The swelling is in the pastern. Is not sore but swells more in standing. Goes up to and in the hock. Goes down

(Continued on page 10).

Do you know
The Youth's Companion
as it is to-day?

Improved and broadened in its scope. Enlarged by the addition of a Special Family Page, Boys' Page, Girls' Page and Children's Page. Great serial stories, 250 short stories. A remarkable Editorial Page. Current Events and Science. A wealth of variety and quality, and all of it *the best.*

FREE TO JAN. 1914
Cut this out and send it with $2.00 for The Companion for 1914, and we will send FREE all the issues for the remaining weeks of 1913 and The Youth's Companion Practical Home Calendar for 1914.

$2.50

TO TAKE ADVANTAGE OF THIS CIUB RATE, SEND ALL SUBSCRIPFIONS TO THIS OFFICE, ADDRESSING AMERICAN BREEDER, 225 WEST 12TH STREET, KANSAS CITY, MO.

Horse Market Dullness Coming

Brisk Trade Not Expected Again Before January 10. Finished Yearlings the Highest Recent Sellers on Beef Market. Top Hogs Hanging Close to $8 Mark.

Settling time in the South has resulted in a rather indifferent demand for horses and mules at central markets. The South is the greatest credit section of the country. In many places the entire twelve months' business is transacted on the basis of the growing cotton crop. Now that that crop has been harvested, is in the process of ginning and moving to markets, settlements are being made. They will continue so up to the first of the year, and then a new period of buying will begin. The economy of the year's purchases always falls to the period when cash is being turned, and consequently the South is not making any additional outlay because credits have less than forty days to run. Just as this is the period of curtailment so the first of the year will show enlargement. This year's cotton crop though smaller than last year's, will amount to more in cash than last year. Prices now are $2.50 to $3 a bale higher than a year ago, and it is not unlikely that that margin will be maintained. Eastern demand, the other wing of the market, is intermittent, and rather erratic. Some plain horses, as Eastern standards go, were sold to this source, but on the whole they are still wanting the good heavy drafters and willingly pay the price for the right kind. Flesh is still at a premium. All horses and mules that have sold south or east have had to meet that requirement, though in some cases quality was lacking. Some excellent horses in poor condition were passed on to feeders.

Dealers are advising that shippers look out for the holiday dullness. That period is not due for two weeks at least but it may hit the market at any time. It would be well, therefore, for shippers to not make heavy consignments at any time between now and the first of the year. December 1 to January 10 will be about the dullest period. Then buyers stay away for the holidays, and the January trade depends much on weather conditions.

There is some demand for horses and mules for feeding purposes, but not as much as a year ago. More mules are going to feed barns than horses, many feeders claiming that it is easier and relatively cheaper to condition a mule than a horse. The high cost of feed is also retarding feeding and choice fat horses and mules next spring will be scarce, with the usual price advance that such a condition insures.

In the central belt buyers say that farmers have about reduced their equine holdings to a normal working basis, and that it is hard to get offerings at a market margin. No mares are offered for sale and all the good young horses are being held. With light receipts markets are expected to show steady prices the next two weeks.

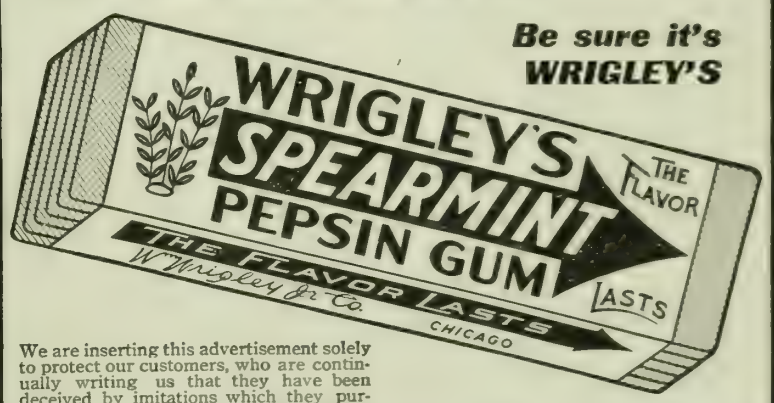
The following quotations are for serviceably sound horses and mules, 4 to 7 years old:

Horses—	
Drafters, choice, 1600 lbs. up.	$250@285
Drafters, fair to good	160@240
Chunks, fair to choice	130@180
Chunks, fair to good	100@125
Expressers and light draft	70@120
Plain workers	50@ 90
Southerns, good	135@170
Southerns, plain to fair	85@130
Plugs	15@ 45
Mules—	
13 to 14 hands	$ 95@140
14 to 15½ hands	135@175
15½ to 16 hands	165@215
16 to 16½ hands	210@300

Short Fed Steers Moving Freely.

In the past two weeks short fed cattle have moved to Chicago in liberal numbers. On each of the two preceeding Wednesdays that market received 27,000, and Monday's runs have been 25,000 to 34,000. While this big run was in progress the Western movement has subsided. Kansas City received 15,000 to 20,000 each Monday and the large part of them came from New Mexico, Arizona and Colorado. In a general way the past two weeks has been a period of readjustment. Where short fed cattle have been moving it was an indication that feed was short and where shipments came from the West they were the last of the season. After an extraordinary summer season it is not unusual for the movement to show many irregularities, and it will take the remaining period this year for the market to be free of uncertainties. The heavy storm in the Northeast early last week delayed traffic and for a time had a depressing effect on the demand, but now the East is buying again, and demand will improve some as the holiday season approaches. Last week prices of cattle fluctuated 15 to 25 cents, but in the preceeding week showed a net loss of 15 to 35 cents. Short fed steers suffered the most. Yearling steers are selling relatively better than heavy steers. The top price for yearlings in the past two weeks, $9.70, was paid in Chicago, and $9.40 in Kansas City. Weighty steers made no better than $9.25. The bulk of the fed steers are selling at $8 to $8.75. Some fed Western cattle on the native side sold at $8.50, and steers fed below the quarantine line sold at $8.40. The bulk of the range steers brought $6.50 to $7.50, and quarantine cattle $5.50 to $6.50.

CAUTION!



The great popularity of *the clean, pure, healthful*

WRIGLEY'S SPEARMINT

is causing unscrupulous persons to wrap rank imitations that are not even real chewing gum so they resemble genuine WRIGLEY'S SPEARMINT. The better class of stores will not try to fool you with these imitations. They will be offered to you principally by street fakirs, peddlers and the candy departments of some 5 and 10 cent stores. These rank imitations cost dealers one cent a package or even less and are sold to careless people for almost any price.

If you want *Wrigley's* look before you buy. ***Get what you pay for.***

Be sure it's WRIGLEY'S

We are inserting this advertisement solely to protect our customers, who are continually writing us that they have been deceived by imitations which they purchased thinking they were WRIGLEY'S.

102 West 9th Street KANSAS CITY, MO.

Killers are hoping that the Southwest cotton belt will feed a good many cattle at oil mills. The sugar beet district mill fattens about as many as usual. Hay fed cattle will not be marketed until late in the winter. Some sections east of Kansas City that usually ship East have sent their cattle to Missouri river markets because Chicago has been swamped with short fed steers. The first week in December a good many prime beeves are expected as that is the time for marketing Christmas beeves.

Prime corn fat steers	[illegible]
Good to choice steers	[illegible]
Fair to good steers	[illegible]
Common to fair steers	6.85@7.45
Meal fed, choice steers	[illegible]
Meal fed, common to fair	6.25@7.45

No Change in Cow Prices.

Aside from the fluctuations of 15 to 25 cents, cow prices in the past two weeks show no important net changes. There is an unprecedented scarcity of prime fat heifers and fed

All communications for this paper should be addressed to the American Breeder, or the Graham Publishing Company, and not to individuals.

Advertising Rates.

1 inch: 1 month, $5; 1 time, $2.80.
½ inch: 1 month, $2.80; 1 time, $2.
Rates for longer time or larger space furnished on application.

SUBSCRIPTION PRICE.

One Year, $1; Three Years, $2. In Clubs of Four, Per Year, $3. For Canada and all Foreign Countries, $1.50 Per Year.

When sending subscriptions, please state whether they are renewals or new ones. Always renew under the same name and initials as previously used, and at least two weeks before your present subscription expires, so that you will not miss any number. When changing your postoffice address, state the old address as well as the new one.

If you miss your paper please notify us at once and all lost copies will be replaced.

Entered as second class matter November 28, 1911, at the postoffice at Kansas City, Mo., under the Act of March 3, 1879.

Copyright, 1913, by the Graham Publishing Co.

All persons are warned not to reprint any part of this paper without first securing written permission from the American Breeder, Kansas City, Mo.

THE SUBSCRIBERS' NUMBER.

Have you sent in your article yet? Do not say that you can not write anything, but go ahead and prepare a short article on some subject. Describe some successful case of breeding; how you got a particular mare in foal; what your customers said when you refused to breed a diseased mare. Tell us how big your largest sucking colt is and give its age.

Who has the heaviest draft mare? Tell us what you have. Give your opinion as to the mares best suited for raising the highest priced mules.

Who has the largest jack? Let us have some weights and measurements. What is your choice of color in mules? How do you make a slow jack perform? What is the best method of handling a jack out of season? How do you tease mares? How do you break a spoiled stallion—one that makes a rush for the mare during service?

What is the best way to get mare owners interested in raising better colts? How will we get rid of the scrub horses? Is the stallion law working satisfactorily in your state? Have you been able to diagnose diseased mares? What effect has it had in your community? Do you think it advisable to breed all mares presented?

Have you had a successful horse or mule colt show? Was it satisfactory, and if not, how could it be improved upon? Tell us how to conduct a colt show; how to get the merchants and the farmers interested.

Have you had a good colt crop in your section? Where feed is short tell us the best method of getting mares through the winter. Have you had any twins this year? Send in a photograph and tell us about it.

Have any of your mares taken the stallion or jack while pregnant? Are the lien laws satisfactory in your state? What breed of horses serve the people to the best advantage in your section? Are foals increasing in number each year in your community? What is the highest price paid for colts of the different classes this fall? What are your terms for standing a stallion or jack?

We want every reader to make a special effort to write an article of some kind, be it ever so short, for the next issue. The next issue is the big Subscribers' Number. It will be edited entirely by the readers. We make a special request for articles from those who are standing stallions and jacks for public service. Prepare your article and send it in now. It must reach this office by December 1. We want every section of the country represented. Get busy and do it now. The bars are down. Write on any subject pertaining to the breeding, feeding, care or marketing of live stock—particularly horses, mules or jack stock.

REPORT STOCK LOSSES IN YOUR SECTION.

Although the United States Department of Agriculture and several state experiment stations gave out early warnings of the danger from drouth stunted forage, losses have lately occurred in various parts of the country.

These warnings we published, but apparently more caution and more cautioning is needed. It will doubtless help a great many people, still, if every reader will write us the facts concerning any losses from forage poisoning of which he knows. Try to have your report tell the kind of stock which was lost and the kind of forage which seemed to cause the loss (whether Kafir, Indian corn or something else); the way in which it was cured; other feeds used at the same time and conditions under which they were fed, and the condition of the animals (full or empty, dry or recently watered) when the suspected feed was given them. Please send us this information as promptly as possible, for the earlier it is published the more good it will do.

STALLION OWNERS' JEALOUSY.

There is entirely too much hard feeling among owners of breeding stock. The owner of a good stallion can not afford to have the ill will of those owning inferior stock especially. There are some breeders who keep a cheap class of breeding stock because they do not know any better. They have little idea as to the market types of horses or the laws of breeding. If they were better posted many of the more honorable of them would see that this stock was injurious to the community and make a change. There are some exceptional breeding animals among the common class of stock, but as a rule grade sires should not be used. There are some who own good stock that have not seen the necessity of treating their fellow men with consideration. Owners of breeding animals should stand together and be a force for improvement. There are many who might castrate the cheap stuff if the subject was placed plainly and good naturedly before them.

We would suggest that the owner of every good stallion or jack should include all the other owners of stallions in his section of the country in his list of mare owners when he sends it in. It will show a friendly interest in them and a little kindness in this direction may be worth much to him. In this way owners of scrub stock will have an opportunity to learn what they are doing to their communities.

WHY SOME BREEDERS FAIL.

Not so many producers fail in the production of pure bred live stock, but there are many who fail in being able to dispose of their surplus produce at the right time. The successful business man appropriates a certain amount to be used in the selling department. Live stock breeders who have made a success have given much thought to this subject—how to reach the buyers at the least expense.

There are thousands and thousands of men traveling over the country looking for pure bred stock of the right kind. Many of these are forced to make inquiries because not enough breeders place their advertisement in a breeder's publication.

A few years ago an importing firm was established in Indiana. This firm had a capital of more than $1,000,000 with which to carry on the business. Competent salesmen were employed. The very best of stock was purchased. It was predicted that this firm would have a great career. A lot of posters were printed and sent out broadcast. The salesmen were sent into the different sections to solicit buyers. It was the intention of this firm to save the advertising expense. It was not going to advertise in publications, and only spent a small amount of money for such purpose. After a period of two or three years this establishment found that it had a lot of worthless notes. Its salesmen had made misstatements and had secured buyers at a great expense that other concerns did not attract. Consequently this firm went out of business. It has not been heard of since so far as we know.

The intelligent buyer, when in the market for live stock, can be depended upon to answer the advertisements in a reliable publication.

A breeder of Percherons recently stated that the business was not profitable. He has about 30 head of pure bred Percheron mares. He had not been able to dispose of his stallions at a satisfactory price, so he employed men to stand them in different section of the country; he also leased a number of them on shares. Consequently he has not received much benefit from the produce of his high class Percheron mares. No one has ever seen this breeders' advertisement in a newspaper. Only those in his immediate neighborhood know that he has stock for sale. He has incurred so much expense from the hiring of help and the injury to young stallions by being handled by his method, that he must ask more money for this stock than he otherwise would have done if he had advertised this stock so that breeders could have purchased it at the proper time. As soon as a stallion reaches maturity it should be sold where it can be used to the best advantage.

Another breeder who had for years spent annually a reasonable amount for advertising decided that it is not necessary to continue advertising as he had in the past, believing his trade to be sufficiently established. Buyers soon got the idea that he was going out of the business, or kept only a few animals, since he did not keep his advertisement running.

The cheapest and the best advertising for a breeder, and especially breeders of horses and jacks, is to find a publication which reaches the particular class of people who buy and use his kind of stock and keep continually before this buying public the fact that he has good stock for sale. Through this method stock can be sold at a proper time. It will not be necessary for buyers to purchase stock which has been let out on the shares, or handled for breeding purposes with cheap hired help. Most buyers are looking for young stallions that have not been injured.

A small advertisement in this paper will get results for those who expect to sell their stock at a fair market value. Those who have never advertised can easily be convinced that it is profitable. Breeders who have been spending their time and money seeking buyers can reach about 40,000 men interested in the breeding business for less money than they make one single trip away from home. A one inch advertisement in this paper costs only $2.80 for one time; $5 for two times. Rate cards showing cost for larger space and longer time are furnished on application.

A WORK FOR EVERYBODY.

You know that the work of increasing the efficiency of a man, a machine or a plant, is a continual hunt for the causes of lost motion and the removal of the causes. But do you know what in the newspaper business is the most serious cause of lost motion? It is the extra, and seemingly unnecessary, work required to keep up subscription renewals. The American Breeder has very much less trouble of this sort than do most farm and live stock papers, but we have altogether too much. Our subscribers know they want the paper to keep coming and are entirely willing to pay the price. We, on our part, are anxious to keep them on the list, providing they want the paper enough to pay the price. Why, then, with both sides willing, should it be necessary every year to notify for the second time, something like 25 or 30 per cent of our expirations? That is what we call lost motion. It would almost seem that our renewals ought to come in without any notice, but to have to send out a second notice to 8,000 or 10,000 surely can be avoided some way. We would much rather put the cost of doing this into making the paper better or bigger.

It is just this problem which has led us to this proposition: We will accept new subscriptions or renew any old ones three years for $1. For three years at least we will not need to send out notices to those who take advantage of this offer, and we believe our subscribers will appreciate the advantage of this as much as we. This proposition is for a limited time only. If it works satisfactorily it may stay, but until we satisfy ourselves on that point we reserve the right to call it off any time on two weeks notice. If we maintain it we must have co-operation. If we make this sacrifice in the price we must have help in getting rid of this lost motion we have been talking about, for the hope that we may thus cut out the lost motion is our very reason for making it.

Now, fellow workers for better things in live stock business, this is a case where you can do more than anybody else. You know who to tell of the absolute bargain the American Breeder is at three years for $1, and knowing why the bargain is offered you know what it takes to keep the offer open. Will you show us something, your very best?

STANDING A BULL.

We have received several requests asking how to get in touch with the farmers and owners of cows in a locality so as to know what kind of a bull to purchase for public service and how many cows can be booked in advance.

A man who owns only a few cows can not afford to buy an expensive bull. There have been many co-operative associations formed for the special purpose of buying outstanding sires. Too many of these associations do not get along satisfactorily. It is much better if some public spirited breeder can purchase and stand a sire and have the exclusive management of it. It has been frequently said, and demonstrated beyond a question of doubt, that a good bull is more than half of the herd. This being the case a bull of the right kind and excellence in an average community should

add greatly to the farm wealth in a very short time.

We believe every one interested in the improvement of live stock would be a booster for this proposition. We would suggest that breeders take this matter up with the editors of local papers. They usually wish to encourage anything of an improving nature in their vicinity. A statement something like the following would be a starter in the way of co-operation with the owners of cows:

"There seems to be a need of one or more good bulls in this vicinity. Beef cattle and dairy products never had a better future than at the present time. The quality of the cattle of this community could be greatly increased by the use of better bulls. If a suitable number of cows can be had to meet the purchase price and expenses of maintaining this kind of stock, I will buy one or more bulls for this improvement, I would be glad to talk to those interested and find out what kind of a bull is best suited for this locality; also the available number of cows. Good blood will be an improving factor in this locality.—Signed, John Brown."

Such a statement printed in a local paper should get results. The editor of the paper should be consulted as to other mentions on this subject. If the editor is not interested, take this proposition up with the Commercial Club or a few of the leading business men. Most of them expect to make that particular location their permanent home and are interested in the improvement of live stock. Many of them may not have thought of the value of good blood introduced in this way, but will appreciate the proposition once it is explained to them.

SUCCESSFUL TWO WEEKS BREEDING SCHOOL.

Great interest was manifested in the cattle breeding school which closed on the 15th of this month. Students were in attendance from several distant as well as nearby states. This was the first exclusive cattle breeding school ever held in the world, so far as we have been able to determine. The names of those in attendance at that class will go down in history as the first students at such a school. The very best of attention was given. Nearly every minute of the time was occupied to a good advantage. The dissecting and examinations were perhaps the most important work of the week.

This success, and the interest manifested in this first cattle breeding school, insures a continuation of this branch of instruction. The next term in cattle breeding will be announced at a later date.

The subject of hog breeding was given much attention. Both practical cattle and hog breeders were in attendance. Many of them were surprised at the amount of new and valuable information on this subject. Every one present expressed himself favorably toward the new venture in cattle and hog breeding study. Among the instructors are heads of animal husbandry departments of leading agricultural colleges who lately have been secured for investigation and teaching in their special lines.

This completes the strongest board of instruction in live stock breeding to be found in the world. These instructors are necessarily all busy men as well as high class men, and it costs something to cover their time and expenses. The management of this school contends, however, that the best are none too good. Expense has not been spared either on instructors of national reputation, facilities for investigation or illustration. Those who have failed to attend the cattle breeding school have missed something.

The twenty-fifth class in Scientific Horse Breeding is now in session. This is the beginning of the fifth year of this school. Hundreds of testimonials from experienced men who attended the early terms have evidenced the great value of this instruction. Every individual who applys himself is greatly benefitted. The class now in session promises to be the most successful one so far. The attendance is good; made up of a high class lot of students, many of them influential men in their communities, and representing a territory from the Pacific coast to Ohio and south as far as Texas.

Instructors at these two terms have so thoroughly satisfied the students and gone to such pains to explain everything in detail that the students have seen fit to make a present to each instructor, sincere and hearty presentation talks being made on the occasion of each gift. Not only has the instruction helped but the character of each instructor is an example and an inspiration for his class.

The next term in scientific horse breeding will be held from January 5 to 10. This is thought to be the best time for any one to get away from home. This is an opportunity for horse breeders to get a lot of information and experience that they can not get anywhere else, including dissecting, diagnosing and other work on animals both dead and alive.—Adv.

DO YOU KNOW THIS ABOUT ADVERTISING.

A publisher has to be always on the watch, and always willing to turn down a money making proposition if he wishes, honestly, to say, as the American Breeder does, that all our advertisements represent firms and articles which we believe to be reliable.

We refuse all whisky and beer advertising and all advertising of medical nostrums and questionable medicines and medical institutions. We refuse all "get-rich-quick" scheme advertising, fake jewelry and cheap, sensational book and music advertising. We refuse to carry the advertising of live stock breeders and importers who have become notorious for crooked or disreputable practices.

This advertising, such as we refuse, pays the highest rate to the papers that will take it, and "asks no questions." When you see this kind of business in big, well established, money making papers, therefore, you have some idea of the income the American Breeder sacrifices in refusing to carry it.

If you believe we are doing right and deserve your co-operation, investigate the institutions and firms for which we do advertise, write for their catalogs, buy from them when you can and always mention the American Breeder.

Remember that the prices and quality of advertised goods are more sure to be right than any others, for advertised goods are sold faster, sold more direct and sold in more open competition than any others, and the seller's printed advertisement in an honorable publication obligates him to those who answer the same.

EXHIBITORS TO SHIP FROM AMERICAN ROYAL TO PANAMA EXPOSITION.

From Assistant Chief I. D. Graham, live stock department of the Panama Pacific Exposition, we learn that the exhibitors of improved live stock in Kansas City territory are planning to concentrate their shipments at the time of the American Royal Live Stock Show in 1915 so that all animals intended for exhibition at the Panama-Pacific International Exposition contests in October and November will be able to come through on special trains on special schedule, and also under supervision of the department of transportation of the Panama-Pacific International Exposition. This will enable breeders to send their live stock through almost as quickly by freight as they would come by express, and at a much lower cost for shipment. Exhibitors from other states are laying plans to concentrate their shipments at the state capital or other principal cities.

The live stock department of the Panama-Pacific International Exposition will handle all the feed necessary for the maintenance of animals

AMERICAN STEEL & WIRE CO.'S

Thoroughly Galvanized Wire

A New and Decided Advance in the Manufacture of Wire for Woven Wire Fences

A Galvanizing of Great Durability, Originally Developed and to be Found only in the American Steel & Wire Co.'s Fences

THE American Steel & Wire Company is the first to develop a THOROUGHLY GALVANIZED WIRE. It has a thicker coat, a quality more refined, and a deeply adhesive contact of the zinc and the steel that solidly unites the two metals, highly flexible without injury, and having a finish and weather resistance unequalled—a *thoroughly galvanized wire.*

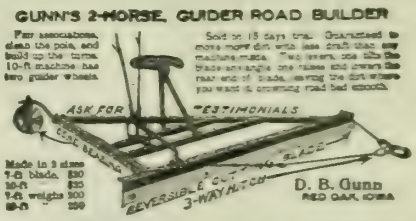
There are wonderful records of super-extraordinary efficiency, such an an auto tire lasting 30,000 miles; a pair of shoes, suit of clothes or a wagon showing astonishing durability; two ships built exactly alike, one being vastly better; or a certain piece of woven wire fencing apparently indestructible under long years of severe trial.

Years ago, in making and galvanizing steel wire, we searched out the reason for this spasmodic super-excellence, and found it to be the *chance combination of a high state of perfection*, in the finest detail, of *man, methods, machinery* and *materials.* We then mastered these fickle elements of chance by the employment of a tremendous manufacturing organization and brought them under control for steady and continuous production.

We now announce the final completion of our facilities for the extensive and permanent production of this thoroughly galvanized wire. We shall use it in the manufacture of our celebrated woven wire fences—the AMERICAN FENCE, the ELLWOOD FENCE, the ROYAL FENCE, the ANTHONY FENCE, and all our other fences.

These fences are adapted for all field, farm and poultry uses, and possess superior structural advantages in quality of steel and fabric. Dealers everywhere throughout the country display these fences and will quote lowest prices.

They cost no more than other fences, and considering the *extra large and heavy wires* used, and the exclusive use of new *thorough galvanizing*, makes them especially attractive as the best and cheapest fences.



FRANK BAACKES, Vice Pres. and Gen'l Sales Manager

60 DAYS' FREE TRIAL
5-YEAR GUARANTEE

during the entire period of the exposition. This feed will be provided by this department and sold to the breeders at actual cost, thus preventing any exhorbitant charge for maintenance which might occur if dealers only were depended upon. Close estimates based on the experience of breeders and farmers show that the cost of maintenance of animals of different classes will not vary greatly from that in the corn belt states. It is the plan of the live stock department of the exposition to erect a number of silos and have them filled with ensilage so that those exhibitors who desire may use this kind of feed.

INTERNATIONAL ENTRIES HEAVIEST YET RECORDED.

Entries vastly exceeding in number any list heretofore compiled indicate growing interest in the International Live Stock Exposition, which occurs this year at Chicago November 29 to December 6. No such list of exhibits has ever before been prepared, nor for that matter have the live stock producers of the North American continent previously manifested such concern in the future of that industry. Every department of the exposition will be full; interest being manifested alike in horses, cattle, hogs and sheep.

Interest in the draft horse is growing and the nightly horse fair will excel even the superb equine display of former years.

In swine and sheep the breeders of the United States and Canada promise to eclipse all previous efforts. Wisconsin and Ontario, as usual, will make a stellar display, and the Western grower will again demonstrate the merit of range product.

Current and threatened beef scarcity renders the fat cattle display of more than usual interest this year. That the beef industry is "coming back" will be effectively demonstrated, and feeders will be furnished with numerous object lessons on the subject of economy in production. In other words, the master feeders of the country will show and tell how they do it.

Make Money With Poultry

AMERICAN POULTRY is a magazine devoted entirely to helping earnest men and women make a finincial success of poultry raising. Its staff of writers is composed entirely of those who have made a practical, instead of theoretical, success of poultry farming, and who are glad to pass on the results of their hard earned experience to AMERICAN POULTRY readers.

There are many pit-falls in the path of the novice which may be entirely avoided by those who will follow the teachings set forth in this magazine. It fully explains how to make a start, how to construct houses, coops, and other devices, how to get a large egg yield, how to cure and prevent disease, how to exhibit, how to get the top price for eggs, how to use incubators and hundreds of other points which everyone wishes to know. It explains the famous secret system through which poultrymen have become rich and afterwards sold for hundreds of dollars.

AMERICAN POULTRY is a large, handsomely illustrated, monthly journal, well printed on fine paper, and should be found on file in the home of every poultry lover. No beginner in the poultry business should think of being without it. It will save him many times the small subscription price. The advanced poultryman will also find it of great value; the articles being varied in their scope.

SPECIAL OFFER. The regular price of AMERICAN POULTRY is 50c per year, but in order to introduce it to several thousand new readers, we will, for a short time, give a 200-page poultry book, which is a complete guide in the poultry business, ABSOLUTELY free to everyone sending 50c for a yearly subscription, or $1.00 for a three year subscription to AMERICAN POULTRY. A trial six months' subscription (without book) will be sent for 25c. Never has so much been offered for so small a sum. Advantage of this offer should be taken at once.

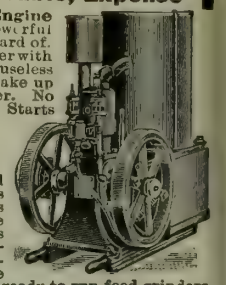
HOUSING POULTRY IN NORTHERN STATES.

To the American Breeder:—Remember that most cases of colds and roup are incurred in the fall because birds are not housed as early as they should be. Fowls are timid in new quarters and are prone to crowd and huddle together on the roosts and drop boards. In this way they become overheated at night only to be chilled when they separate in the morning. It is an excellent plan, therefore, to house a few at first and as soon as they feel at home, add a few more until the pen has received its capacity.



It is an accepted fact that any change in location affects the laying stock, therefore, in order to induce early laying the pullets should be put in permanent winter quarters two or three weeks before they are expected to mature.—A. C. Smith, Poultryman, University Farm, Minn.

A GOOD CROP THAT HAS BEEN OVERPRAISED.

Whenever a crop, breed of livestock or method of farming is brought to the public attention it is liable to receive so much publicity (due to the fact that it is new) that its excellence or importance will be overestimated. This probably happened in connection with the discussion the past season of the crop known as feterita. The plant undoubtedly has merit, and should be protected from the bad effects of disappointments, such as are bound to come to those who get a wrong idea of its possibilities. To that end we quote from the Kansas Industrialist the following statements made on the authority of L. E. Call, agriconomist of the Kansas Agricultural college:

"Many farmers in Central and Eastern Kansas who are buying feterita seed, at its present high price, may be disappointed next year. It will

Detroit Kerosene Engine
Saves Time, Trouble, Expense

The Detroit Kerosene Engine is the simplest and most powerful engine you ever saw or heard of. Direct transmission of power with 3 moving parts only—no useless cams, gears or valves to take up power or get out of order. No trouble—no extra expense. Starts without cranking.

Runs on Cheap Kerosene

Will run on distillate and gasoline; but kerosene costs less than half as much as gasoline. Besides, kerosene contains more heat units than gasoline. Result—more power—steadier power—at one-half the expense of fuel. Comes to you all ready to run feed grinders, separators, pumps, saws, electric light plants etc. All sizes in stock ready to ship.

GUARANTEED 5 YEARS—Sent on trial direct from our factory at lowest factory prices. Don't buy an engine until you have seen the "Detroit." Write today for catalog and agent's special introductory price on first order from your territory. (188)

Detroit Engine Works, 203 Bellevue Ave., Detroit, Mich.

Better Than WOOD!

Edwards STEEL Shingles

are much cheaper, four times more lasting. Made with the Edwards "Tightcote" Process and Edwards Patent Interlocking Device. Cannot rot, rust or catch fire. They come in clusters of 100 or more—go on *all at once*. $10,000 guarantee against lightning loss. Used on over 100,000 buildings.

Low Prices! Sold direct from factory at low prices, freight prepaid. Postal brings Factory Prices and Free Book No. 1176. If possible, give size of roof and get price on complete job. Send postal today—get everything by return mail. (130)

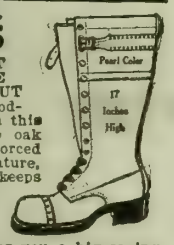
U. S. ARMY AND NAVY GOODS

We are the largest dealers in U. S. Army and Navy goods in the world. When Uncle Sam buys more goods than he needs he sells them to us for a mere fraction of their cost. In this way we come in possession of thousands of bargains which we offer you. We also buy many goods from foreign governments.

Hunting Knife and Scabbard **95c Prepaid**

Worth $4.00. 8 to 10 in. blade, 5 in. hardwood and steel handle, brass riveted, made of Sheffield steel, the finest tempered steel in the world. Ground to razor edge that will hold indefinitely. These sword knives were recently discarded by the English government. Makes the finest kind of hunting knife or for trimming hedges, cutting corn or cane, or as a butcher knife. Prepaid, 95c.



U. S. Army Blankets $4.95 5.45 prepaid

We have sold many car loads of these blankets. They are the greatest values in the world, without exception. BRAND NEW, full 72x90 inches (6x7½ feet). All pure wool, ⅔ OF WHICH IS BLOOD WOOL; color, bluish-gray or army tan; striped borders, U. S. ensign beautifully done in center. Weight full 5 pounds. Order from this ad and receive the greatest bargain you ever saw.

Highest Quality Boot Made.

Elk Hide, Cork Welt, Two Full Soles, only $5.95

NO. 13376. THE HIGHEST QUALITY GENUINE CHROME TANNED ELK SKIN HIGH CUT EVER MADE. The genuine Goodyear welt hand-sewed soles on this boot are of the finest white oak tanned leather, and are reinforced with the new cork welt feature, which excludes the water and keeps the foot warm and dry. Money and skill can not produce a better article than this, and on this special contract we are enabled to offer you a big saving. This is the best shooting boot, and is almost indespensable for the man out of doors. Order quick, as this lot will sell quickly. Sporting Goods Houses get $10.00 per pair, 17 inches high. Men's sizes, 6 to 11. Price, only $5.95.

U. S. GOVERNMENT OVERCOAT Brand New Coat, Worth $25.00 $2.95

This is the Regulation U. S. Government Army Overcoat; Navy blue. Complete with cape; made of PURE WOOL KERSEY CLOTH and wool cloth lined; cape is lined with blue, red or yellow wool serge and is detachable. Brand new All sizes. Order direct from this ad. This is the biggest overcoat bargain you ever saw and is positively worth $25.00. This is one of the luckiest purchases we ever made and we expect every man who reads this ad to order.

$30 Beaumont Repeating Army Rifle $2.95

This is a marvelous bargain. A 5-shot, hammerless, repeating army rifle, guaranteed to be in perfect working order; made under government supervision. The most accurate rifle made. Magazine under barre holds five cartridges. Only three movements to load and fire. Equipped with adjustable, long range lift sight; length from butt to muzzle 52 inches; shoots 48 caliber cartridges and can be used as a shotgun. Only a limited quantity of these guns left, so be sure to order today at this ridiculously low price. $2.95.

Send for "Book of A Thousand Bargains," describing hundreds of other wonderful bargains in Government Goods and General Merchandise. Free upon request.

not do so well in those sections of the states as well selected kafir. It is, however, well adapted to the Western third of the state, and though grown there only a short time, it appears to be very promising. Professor Calls says:

Feterita is a grain sorghum equal or superior to milo, though the fodder is not so good as kafir. The heads of feterita are large and erect, being easily harvested. The grain is larger and softer than kafir and can be fed without being ground.

The assertions that feterita is chinch bug proof are false. It is true that the pests do prefer other sorghums, and the wonderful vitality of the plant enables it to replace the leaves and stalks which are destroyed, but it can not be considered safe from a chinch bug invasion.

Kansas grew feterita first in 1911 at the Fort Hays experiment station. Since then it has been grown in many other parts of the state, and has proved to be unusually drouth resistant. This sorghum receives the same treatment as kafir and matures thirty days earlier.

A circular describing feterita may be obtained from the United States Department of Agriculture, Washington, D. C.

HOW TO TELL THE AGE OF CATTLE.

To the American Breeder: The calf when born has two pair of incisors, the other two pair appear during the first month. When a calf is 18 months old it loses the middle pair of milk incisors and grows a permanent pair. The next pair, one on each side, is replaced at 27 months of age, the third pair at 36 months, the fourth, or outside pair, at 45 months. The time of appearance of these incisors varies within rather narrow limits, so that we are able to tell the age of young cattle fairly accurately.

The calf also has a temporary set of molars, which are later replaced with permanent ones, but they are not considered in estimating the age of the animal.—G. E. Morton, Colorado Agricultural College.

INFECTIOUS ABORTION IN SWINE.

To the American Breeder:—Cases have been reported from two different breeders which suggest the occasional appearance of infectious abortion among swine in the Northwest. Evidently it is quite rare but may easily spread if it exists, as suspected. One man reports the purchase at a certain fair of a fall yearling gilt. The sow was bred but lost her pigs after about six weeks. She was bred again and aborted again in a similar period. About six of this man's older and better brood sows developed the same trouble. He believed that the older sows were infected from the boar that had previously served the young sow. The other breeder reported a somewhat similar experience. This item is published with a view to putting breeders on their guard against a possible source of trouble.—M. H. Reynolds, Veterinarian, University Farm, Minn.

GOOD SHORTHORNS.

Pratical cattle for both beef and milk. Just the kind the farms of the country need, and with breeding and conformation to make show cattle if you want them. I show my breeding stock successfully, but no stock is ever crowded enough to hurt it.

Pleased to show stock, quote prices and answer inquiries at all times.

O. L. THISLER, Chapman, Kans.

GOOD PLACE TO STUDY DRAFTERS.

To the American Breeder: We had the pleasure today of a visit from Professors E. A. Trowbridge and Howard Hackerdorn of the University of Missouri, accompanied by the following students who compose the judging team of the University of Missouri at the coming International Exposition. The class is composed of Ralph Royce, J. W. Arnold, Carl Gillispie, C. W. Caldwell, W. W. Fuqua, Dean Dickerson and Harry Reed.

Full classes of Shire stallions and mares of all ages, together with Percherons, Belgian and Suffolk stallions and mares were judged by the team and we wish to congratulate them on the good word done here. We wish them every success at the Interna-

tional and so far as horses are concerned I believe they will uphold the credit of their university.—Truman's Pioneer Stud Farm. J. G. Truman, Manager.

QUESTIONS AND ANSWERS.

(Continued from page 4).

some with exercise. Am fomenting with hot water once per day and using Absorbine, but it does not bring the swelling down. Would it do to blister it around the pastern with a mercury of cantharides blister? She is not lame only as the swelling interferes with her action.—Missouri Subscriber.

REPLY—The very best thing you can do with this young mare is to turn her out until spring. Exercise seems to reduce the enlargement while standing it seems to aggravate it. When an animal runs loose they are taking moderate exercise the major portion of the time, which is ideal for reduction of enlargements of the class complained of. Exercise as usually given by driving animals does not give the same good results for the reason that the concussion on the hard roads causes irritation and inclines to make conditions chronic. The parts should be given a vigorous rubbing once daily with alcohol and witch hazel, equal parts. If you will faithfully follow this advice and discontinue strong applications to the parts, your horse should make a satisfactory recovery.

SO-CALLED BIG HEAD—I have a mare six years old that has the big head. The veterinarian said she was cured, but she has two knots on her head. I would like to know your idea about it.—Missouri Subscriber.

REPLY—Big head or osteo porosis is a rather rare disease in your state and we would have to have a more careful description of the size and location of the "knots," as well as the length of time they have been there, before pronouncing the case big head. Write us more fully about the case.

COLT GIVES MILK—A patron of mine had a mare to foal a filly colt. The colt at foaling time had an udder like a mare suckling a colt. I saw this colt a few days after foaling and milked quite a bit of milk from this colt. Please tell me the reason for this colt giving milk.—Illinois Subscriber.

REPLY—It can not be definitely shown why so young an animal should suddenly begin to give milk, but such cases rather frequently are seen. In some way the mammary gland has been stimulated to action which sometimes is occasioned through the attempted elimination of some product through it. It sometimes occurs that other non-pregnant females do as described in the colt in question. The mule that breeds only under rare circumstancts is not immune to these influences. The care of such a case is along the line of that pertaining to drying up a cow or mare. The milk should be withdrawn at such intervals as will prevent inflammation of the gland developing.

BLOODY WART—I have a fine mule that has a blood-looking wart on the hind leg. Would like to know what to do to take it off?—Illinois Subscriber.

REPLY—Some warty appearing growths are malignant in character and the proper way to remove the type you have described is by means of a surgical operation. We would suggest that you have some qualified veterinary surgeon carefully dissect out this growth.

AFFLICTED JACK—I wrote to your paper some time last spring in regard to a jack that I have that was afflicted with what the veterinarian called kidney affection. He has been down now about eight months and is

For sale. Sound; 5 years old; dapple gray; easy to handle; weight 1800 pounds; good disposition; drive anywhere to a top buggy. Want to quit the business.

B. B. McENDARFER, Waterloo, Indiana.

not able yet to get up on his feet without help. The first three months he was down he was perfectly helpless and could bear but little weight on his feet when I would swing him up. In fact, when I first swung him I believe he would have died in a short time if I had not let him down. He seemed to be in a great deal of misery but he has gradually but slowly improved until now he stands most of the time without bearing much weight in the swing, and twice lately I have taken the swing from under him and got him to walk thirty or forty feet; then he will drop down again and can't get up without help. When he walks he is very tottery. It seems like a good deal of the trouble is in the fore legs, but when he is down and goes to get up he can raise up on his fore feet, but can't get upon his hind feet. I keep a swing under him all the time except when I let him down to rest, which is only once or twice a month. He is eight years old and a big fine fellow, and registered. In fact, he is one of the best jacks that this part of the country ever saw. Please tell me what to do to help him?—Missouri Subscriber.

REPLY—If you have not already had a good competent veterinarian subject this jack to a careful and thorough examination you should do so. It may be that the jack has suffered an injury of the spinal column, or has some chronic diseases of the kidneys or possibly may have rheumatism in the lumbar muscles. A cercertain diagnosis should be reached before an attempt is made to prescribe for the case, and that diagnosis can only be reached through an opportunity to make a personal examination.

Percheron and Other Draft Breeds.

Jan. 27 to 30, inc.—Bloomington, Ill., C. W. Hurt, Mgr., Arrowsmith, Ill.

Chester White Hogs.

Feb. 10—B. M. Boyer & Sons, Farmington, Ia.

February 19 has been claimed by Chas. Irvine, Ankeny, Ia., as the date for his public sale of Belgian and Percheron stallions and mares. Mr. Irvine writes that he has just sold the six year old roan Belgian stallion advertised in the American Breeder. Note his new ad.

Three hundred Percherons—mature stallions and mares and yearlings and suckers of both sexes—are advertised by Singmaster & Sons of Keota, Ia. Many of the mares are bred to this firm's $3,000 stallion, Honorable Jr Jalape. If interested in this kind offered by a firm that has been in business 39 years, answer the advertisement of Singmaster & Sons in this issue and mention the American Breeder.

Genuine values in the best classes of draft stallions, clean business methods, conservatism and broad reliability are the features of a business which has been developed to foremost rank among establishments of this kind, by Taylor & Jones of Williamsville, Ill. Every reader is asked to mention the American Breeder in making inquiry of this firm.

Read the sale advertisement of E. W. Breckenridge, Olathe, Kas. Here is a chance to buy a high class young Belgian stallion and some mighty good young Belgian mares. The ad appears but once—sale December 2. Don't miss it. These Belgians are strictly desirable.

Clydesdales and Shorthorns will be sold at auction November 26 by Ernest Joos of Alta, Ia. Read the ad. in this issue and get to the sale if possible, as the opportunity to buy such Clydesdales is unusual.

For a lamp that is a real light giver write Mantel Lamp Co., 796 Alladin Bldg., Chicago, and mention this paper.

Horse men almost anywhere can vouch for the value of Prof. Jesse Beery's instructions in horse training. See what he offers through his advertisement in this issue and mention the American Breeder when writing him at the address given.

A good engine of some sort or size is a necessity on almost every place, be it large or small. Begin right now to study the proposition. Get catalogs from the three firms advertising in the American Breeder—the Detroit Engine Works, 203 Bellevue Ave., Detroit, Mich.; the Ottawa Mfg. Co., 251 King St., Ottawa, Kas., and the Witte Iron Works, 2556 Oakland Ave., Kansas City, Mo. Mention the American Breeder to each firm when you write.

Ask any ten farmers or stockmen of experience in this territory what make of woven wire fence is best and a majority will answer "The American." That is the woven wire fence being advertised in the American Breeder.

If you want to buy a registered draft stallion from a western firm doing a clean, conservative business write Chas. R. Kirk, manager of the Percheron Importing Co., So. St. Joseph, Mo., and tell him what you want, being sure to mention the American Breeder.

On page 2 of this paper (just inside the front cover) are the advertisements of the most important two draft horse sales to be held this year. They are the sales of W. S. Corsa of White Hall, Ill., and of Trumans' Pioneer Stud Farm, Bushnell, Ill. Both sale offerings are made up chiefly of high class mares and fillies (the Corsa sale of Percherons and the Truman sale of Shires), but opportunity, in both cases, will be afforded for the buying of choice stallions. No firms in America stand higher for the quality of horses (of the respective breeds) which they sell, and no other public offerings this year, will contain so much prize winning material. Get catalogs from both firms, as per advertisements, note the dates and be sure to mention the American Breeder.

John T. Adams, Charleston, Ark., has a registered Percheron stallion and a four year old jack advertised for sale in this issue. Look up the ad.

W. H. Skibinski, Richview, Ill., has big registered jacks and imported and American bred Percheron stallions for sale at all time, at the right kind of prices and the right kind of terms. Write for particulars.

Freeland Bros., Fontana, Kans., are advertising a jack to trade for good mules, draft colts or good work stuff. If interested, look up their ad.

I thoroughly tested the qualities of Lion's Stock Remedy, sold by the Lion Stock Remedy Co., of St. Louis, on a bunch of mules I was feeding, and after a few days I could notice a marked improvement. Am perfectly satis-

C. Higene & Co., Dept. F, 2441 Post St., San Francisco, Cal., will send a catalogue of the books they have for sale to any one writing for it.

Henry Lefebure, Fairfax, Iowa, has been identified with the improvement of the Belgian horse in America for twenty-eight years. No little amount of the present popularity of the Belgian is due to Mr. Lefebure's exploiting the excellent draft qualities of his favorite breed. He has always handled the Belgian horse almost exclusively and has probably imported and sold as many Belgians as any single importer. At the St. Louis World's Fair his Belgians were the heaviest winners. Mr. Lefebure is situated in such a manner that he has reduced the cost maintaining his business to the minimum as he has four farms all adjoining and raises to a large extent all the feed consumed by his horses. He gives the buyers the benefit of this feeding and can sell good horses as low as anyone. The horses are kept on the farms and the imported mares do all of the farm work besides raising colts each year. Each year Mr. Lefebure's increasing trade makes it necessary for him to import more horses. His fall importation of a hundred head can be seen at his barns. The horses are recovering nicely from the effects of the shipment and are ready to show prospective purchasers. This year Mr. Lefebure purchased twenty Percheron stallions and can supply the wants of anyone wanting really high-class Percherons. His Belgians are the best lot that he has ever imported and are a credit to his ability as a judge. His advertisement gives the location of the farms and also states that a handsomely illustrated catalog will be sent free to those applying for same. Anyone wanting a good Belgian or Percheron stallion, write Mr. Lefebure, mentioning the American Breeder.

J. A. Songer, Neodesha, Kas., has a Percheron stallion that he wants to trade for land. Read the ad and then write for full particulars.

E. F. Lewis, Buford, Ohio, has an extra good jack advertised in this issue for sale or trade for a team of good young mules. If interested, don't fail to read the ad.

Box 63, Cormorant, Minn., has 200 acres of good land for sale. He will take a jack for first payment and the balance on easy terms. Read the ad in this issue.

B. B. McEndarfer, Waterloo, Ind., is advertising a registered Percheron stallion for sale. He wants to quit the business and will sell this stallion worth the money.

Guy W. Fisher, Frankford, Mo., is advertising jacks and jennets, any age, for sale; one or a car load.

Louis Koenig, Solomon, Kas., has three jacks and one Percheron stallion advertised for sale in this issue. Read the ad for prices and description. He also has Duroc Jersey hogs.

H. A. Fullerton, Montevideo, Minn., is offering a standard bred stallion and mare for sale or trade for Percheron fillies. Look up the ad and then write for further information.

B. M. Boyer & Sons, Farmington, Ia., writes "The seven year old Shire stallion we offer for sale is American bred, dark bay or brown in color, with massive bone and sinew; could be made to weigh 2,300 pounds. We have used him in harness for all kinds of work on the farm. A ten-year-old boy can drive him anywhere. Were it not for his fillies here on the farm, $1,200 would not buy him. He has proven a sure breeder and have his colts here on farm to show. The fillies we are offering for sale are sired by him. The mares in foal we offer for sale are bred to an imported Shire stallion."

E. J. Munter, Vandalia, Ill., is advertising a black jack, seven years old, for sale at $400, as he is quitting the business. He says this jack is a bargain.

Any one in the market for a jack should look up the advertisement of Phil Walker, Moline, Kans. He is a regular advertiser in these columns.

Joe E. Wright of Junction City, Ky., is making a special price on his jack stock in order to make room for the young stock. He guarantees to please his customers.

The Fairview Jack & Jennet Farm, owned by J. C. Huckstep, Eolia, Mo., would be pleased to send prices and descriptions. Everything is guaranteed as represented.

G. Fred Skank of Henderson, Iowa, has a Kentucky jack for sale or exchange for stock or an automobile. Look up the ad.

Henry Obermann of Friestatt, Mo., has 22 head of jacks and jennets for sale, also draft stallion and trotting stallions that he must sell on account of their fillies. They are priced to sell.

High grade Shetland ponies are advertised for sale regularly in these columns by W. H. Fulcomer, Belleville, Kas.

Richard Sellman of Rochelle, Texas, will be pleased to send any one of our readers interested in Morgan horses a catalogue telling all about the stock he has for sale. His ad appears regularly in this paper.

Why not try a bottle of "Visio," advertised regularly in these columns by the Visio Remedy Co., 2475 Calumet Avenue, Chicago, Ill., and sold for $2.00 per bottle with a "money back" guarantee.

BELGIAN EMPORIUM OF AMERICA

Largest collection of Belgian draft horses on earth. Also 20 choice Percheron stallions. The fall importation of 100 head, the second importation for 1913 swells the number on hand to 175 stallions, mares and colts. Many prize winners; many descendants of prize winners. All choice animals. We are farmers and stock breeders; twenty-eighth year in the Belgian horse business. Each year adds to our strength, and now we can defy competition in quality, quantity and prices.

Four farms, all adjoining; 7 large barns.

Write for free illustrated catalogue.

H. LEFEBURE & SONS, Fairfax, Linn Co., Ia.

(Eight Miles from Cedar Rapids.)

Blue Valley Stock Farm

Largest Importers and Breeders of High Class Belgian

Draft Horses in the West. Importation of Belgian stallions and mares arrived Sept. 7th. Many of our horses were medal-winners at the foreign shows this year, all are sound, acclimated and ready for service. Lowest prices and safest guarantee of any firm in the business.

Also a few extra good Percherons. Write us, always mentioning the American Breeder.

IRVINEDALE FARMS

BELGIANS AND PERCHERONS, THE BIG, DRAFTY KIND.

ANNUAL PUBLIC SALE, STALLIONS AND MARES, FEB. 19.

Forty head stallions and mares—a good useful lot. Stallions 2100 to 2350 pounds at maturity. Prices $300 and higher, according to quality. An extra good 2-year-old Percheron, fit to head a pure bred stud. All sound and sure breeders. Mares will weigh 1900 to 2200 lbs. in show condition. Price $250 to $800.

Terms cash or bankable paper. We will pay expenses to any one that does not find stock as represented. Inspection invited. Farm at Ankeny, 10 miles north of Des Moines on C. & N. W. R. R. and Ft. Dodge, D. M. & Southern Interurban. Will meet trains if notified. **CHAS. IRVINE, ANKENY, IOWA.**

IMPORTED BELGIAN STALLION AND MARES.

Am closing out and must sell at once. The stallion is 8 years old, actual weight about 1,900; seal brown, very sure and has the best possible disposition. There are 3 mares, all threes; one has stud colt at foot and all are in foal. One of the mares is American bred, but from imported stock. The colt is sired by a $2,000 imported prize winning stallion. One mare is a granddaughter of Indigene du Fostiau, and all are choicely bred and strictly good. This ad appears but once. Address B., care of American Breeder.

CLOSING OUT SALE.

Two imported Belgian stallions, 6 years old; bay; 2000 and 2100 pounds; one imported Percheron stallion, 11 years old; black. One home bred Percheron stallion 2 years old; black-grey. Also some registered fillies. These horses are all sound and priced to sell.

HATTEBERG BROS., R. 4, Paxton, Ill.

O. P. Wilson & Co., 3754 Wayne Avenue, Kansas City, Mo., manufacturers of "Jack Sorine" advertised regularly in these columns, guarantees this medicine to cure any sore on the legs of a jack or stallion or will refund your money. Give it a trial.

The "Indestructible Horse Collar," advertised in these columns by the Johnston-Slocum Co., 933 State St., Caro, Mich., is most durable and humane, easy to put on and take off, and a money saver. Don't fail to read the advertisement.

Any one in the market for Shorthorn cattle, either for beef or milk, should write to C. H. White, Burlington, Kas., and get prices on his stock. He is always pleased to show his stock, quote prices and answer inquiries. His herd is handled in a practical way.

Those of our readers who are interested in poultry should read the advertisement of American Poultry, Savoy Bldg., Wilkes Barre, Pa. They are giving away a 200-page poultry book with every regular subscription at 50 cents per year.

Jacks that are bred right, raised right and priced right are advertised for sale by L. W. Garriott, Austin, Ind. Read his ad.

Imported and home bred stallions are advertised regularly in this paper by A. Latimer Wilson, Creston, Iowa. Write Mr. Wilson for full information concerning this stock.

D. Augstin of Carlock, Ill., always has a large number of American bred Percheron stallions and mares on hand to select from at reasonable prices. Don't fail to write him if in the market.

Percherons, Belgians and German Coach stallions and mares are offered for sale at all times by Will Bellman, Delavan, Wis. See what he says in his ad.

Spohn's eye lotion is unequaled in all cases of acute and chronic inflammation of the conjunctive, or mucus membrane of the eye, and removes irritation, ulcerations, granulations, films

GUY W. FISHER,
Frankford, Pike County, Mo.

GOOD BLACK JACK

For sale; 3 years old last August. Sure breeder. Price to sell quick $500, as farm is sold.

THOMAS GRUBB, Brookfield, Mo.

and other abnormal growths, and leaves no bad results. It is dropped or brushed into the eye, and causes no pain, but is soothing and healing. In many cases of pink eye or other contagious disease, where the eyes are affected, the use of Spohn's Eye Lotion restores the normal conditions of the eyes and hastens a cure. Spohn's Eye Lotion is a special prescription and is not carried in stock, but is prepared for each customer as he orders it. Price, $1.00 a bottle. It is worth something to have the reputation of "Spohn's" back of anything you buy.

Any of our readers interested in Clydesdale horses should write to W. A. DeMerritt, Plainfield, Ill., and get prices on his stock. He also has Shorthorn cattle for sale.

Hart Bros., of Osceola, Iowa, say they have the best importation of Percherons, Belgians and Shires they ever had, and would like for any of our readers to see their stock before buying elsewhere.

Wm. J. Corbett of Anamosa, Iowa, has a registered Belgian stallion for sale at a bargain if taken soon.

Enos Stewart, proprietor of the Wilcox Stock Farm, Lexington, Ill., starts his ad in this issue, and would be pleased to tell any of our readers who are in the market for Percheron stallions or mares all about his stock. His mares are in foal to a prize winner.

Jennets, jacks and Percherons are offered for sale in this issue by N. S. Cox & Sons, Pattonsburg, Mo. This is all registered stock and of the best breeding. Look up the ad.

Now is the time that you want your horses in A-1 condition—get them ready for the buyers' keen examination—they know a good horse when they see it. Increase the market value of your horse by removing any blemish that may be present. Absorbine is the preparation you are looking for. It is more than a liniment—it is an Antiseptic and Germicide of proven value. This makes it especially successful in open sores or wounds, as it kills the germs and makes the part aseptically clean. Matt Cohen, Lexington, Ky., writes: "I wish to state that your Absorbine stands out pre-eminently head and shoulders above all remedies for the removal of enlargements, callous growths, and speedy restoration of bowed tendons, not to mention the benefits derived from its usage after a hard, gruelling contest, and for the past ten years I have not left my stable of show horses without a full supply,

George Hirschman, the well known breeder of Percherons at Pierson, Ia., starts his ad in this issue. Mr. Hirschman has 30 Percheron stallions and mares that he is offering for sale, either in a bunch or separately, as he is unable to get competent help. Don't fail to write him if in the market.

Any one having young mules to dispose of should not fail to look up the ad in this issue of J. W. Gillum, Wing, Ark. He has two large mammoth jacks to trade for young mules, or for sale.

E. M. Browneller of Deweyville, O., is quitting the business and has a black Spanish jack for sale at a bargain. His ad appears in this issue.

Look up the ad in this issue of D. B. Kirby, Grain Valley, Mo., and see what he has to exchange for jacks and jennets.

There never was a better proposition made to buyers of first class ranges than is being made through the American Breeder by the Kalamazoo Stove Company of Kalamazoo, Mich. Not only is the price right and goods the best, but the buyer is offered a 30 day free trial, so that he is absolutely taking no chances at all. Please look up the advertising of the Kalamazoo Stove Company for ranges and furnaces and write for catalog No. 690, mentioning the American Breeder.

When it comes to roofing, remember the Edwards Mfg. Co., 1026-1076 Locust Street, Cincinnati, Ohio. This firm makes the best metal roofing. Mention the American Breeder.

If all the "good roads" stories gave the name of the machine that is doing the most good in proportion to the cost and the horse power required to handle it, D. B. Gunn of Red Oak, Ia., would get thousands of dollars worth of free advertising, for he makes this machine, Gunn's 2-Horse Road Guider Builder. Mention the American Breeder when writing him for catalog.

Most of the finest and most successful agricultural territory on the American continent this year, lies along the Canadian Pacific Railway. If you want to know more about this region of wonderful opportunity, write K. T. Thornton, Colonization Agent, 112 West Adams Street, Chicago, Ill.

If you are interested in good and cheap farm land in zones of certain development, traversed by the Kansas City Southern from Kansas City to the Gulf of Mexico, write Wm. Nicholson, Immigration Agent, 671 Thayer Bldg., Kansas City, Mo.

The high prices of furs for wearing apparel has in many cases doubled, and sometimes more than doubled, the prices which dealers pay for animal pelts of various kinds. If you are interested in this year's opportunities along that line write M. Lyon & Co., 268 Delaware St., Kansas City, Mo., for price list and information. They issue a trapper's guide which will interest anybody.

W. G. Taylor of Sedan, Kansas, has an extra good black jack advertised for sale in this issue. Mr. Taylor says this jack is worth $1,000 and should be where there are more mares. Read the ad.

H. A. Greenwell, Lakenan, Mo., is advertising saddlers for sale, both stallions and mares. Also a few Hereford bulls.

Elmer S. Baughman, Taylorville, Ill., has a six year old stallion advertised in this issue, also one coming two years old. If interested look up his ad.

I. C. Evans, breeder and importer of Percheron stallions and mares, of Troy, Ia., starts his ad in this issue, and guarantees square dealings at the right kind of prices. Any one in the market should not fail to get his prices before buying elsewhere.

Several Percheron stallions and mares and one jack are for sale by H. M. Stephens, Munden, Kas.

MEASUREMENTS OF JACK COLT AT FOALING.

To the American Breeder:—I have never seen in your paper the measurements of a young jack given, so I will give the measurements of one that I have that was foaled the 26th of August, and would like to know if these measurements denote a good jack. These measurements were taken when the jack was but a few hours old. The sire is 16½ hands high, and dam 14½ hands high. Height of colt, 36 inches; heart 28 inches; collar 24 inches; width of breast 8 inches; knee 9 inches; hock 11 inches; arm 9 below knee; 5 inch ears; tip to tip 23 inches; tip of nose to top of head 17½ inches; tip of nose to root of tail 50 inches.—R. S. England, Mercer County, Mo.

Editor's Note:—Scores of our readers have sent us the measurements of jack colts and they have been published unless lack of space prevented. We consider this educational, and would like this season to print weights and measurements of young draft horses, foals and yearlings.

NEARLY $5,000 FOR 25 YEARLING MULES.

To the American Breeder: In regard to the kind of a mule that is accepted as a typical show mule and that wins premiums, I do not like to express myself to the public, although I have been pretty lucky in the show ring on yearling mules. I never went in the ring with a yearling mule or bunch that I did not take a blue ribbon.

I never showed any other age until this year. I had a colt at Kansas City and took first on it. Mr. Sloan had the 2-year-olds, but I sold them to him last October at my sale. I select a colt with as much size as possible to get good quality, good head and ear, good bone, smooth, straight on its legs and one that will mature quick, develop at a yearling to look like a 4-year-old and have lots of growth. Get them to weigh from 600 to 700 at weaning time and don't wean them until middle of October and then take care of them and they will weigh 1,200 at yearlings and 1,500 to 1,550 at 2 years old.

Take this for what it is worth: Get these mules out of good, smooth jacks and good, big heavy boned mares, and then they will keep growing.

I just had my anual sale of yearling mules last Wednesday and the top pair of yearlings brought $515. Including the yearling mules I sold at Kansas City the bunch of 25 averaged $198.15 per head; the highest average

KENTUCKY JACK AND PERCHERON FARMS.

200 head of big bone Kentucky Mammoth jacks, Percheron stallions, mares, saddle geldings and mares. Special prices to parties buying in car or car load lots. Catalogs ready November 15.

COOK & BROWN,

D. B. KIRBY, Grain Valley Mo., or LOUIS H. GOULD, Greenville, Texas.

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay

Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000

for erecting your buildings, fencing, sinking well and breaking. You have twenty years in which to repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based On Good Land

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps. Write today.

K. T. THORNTON, *Colonization Agent*
Canadian Pacific Railway
Colonization Department
112 W. Adams St., Chicago

FOR SALE—Town lots in all growing towns—Ask for information concerning openings.

***Now* is the time—**

to make a trip to Texas and see just where *your* opportunity lies.

The price of good, rich land in Texas is so low that you can own a big farm there without investing much money or mortgaging the place. The land will raise as big or bigger crops than you are now raising, and you will get better prices for what you raise.

Ask your local agent to sell you a ticket via the Katy—or tell me where you want to go and I'll plan your trip, and give you full information about the *low homeseeker's excursion fares* on the first and third Tuesdays of each month.

I will also send you our free books on Texas opportunities if you want them. Write today.
W. S. St. George, Gen'l Pass. Ag't. M., K. & T. Ry. St. Louis, Mo.

LAND FOR SALE

I have 200 acres of as good as the best land in Becker County. Bran new land, just being broke, large buildings. Will take a good jack as first payment. Easy terms on balance if desired. Address
Box 63, Cormorant, Becker Co., Minn.

ever sold in Northwest Missouri, beating my average of last year by 65 cents per head. Don't look like the market was off bad.—James Everly, Daviess county, Mo.

REX McDONALD DEAD.

Rex McMcDonald 833, perhaps the world's most famous saddle stallion, died November 10, the property of B. R. Middleton, Mexico, Mo. Not only was Rex McDonald famous as a show horse, having won over nearly every animal exhibited while he was being entered for such contests, but as a breeder he was likewise a great success. He was 23 years old. Mr. Middleton is having the body mounted.

MARKET REVIEW.

(Continued from page 5).

cows, and such as are coming are ordinary in quality. Just what strictly finished light weight heifers would bring is conjectural, but some buyers say $8.75 to $9, and maybe better. Prime cows are quoted up to $7.50 and steers and heifers mixed, $8.50 to $9.25. While this is the market for prime butcher cattle, canners are selling at $4.15 to $4.75, medium cows $5 to $6, and heifers from $5 up. Veal calves continue in urgent demand, top of $10.25 in the West, and $12 in the East. Few have been offered, and the supply from now on will be small. Bulls are selling at unchanged prices.

Cows—	
Choice	$6.60@7.50
Fair to good	5.75@6.60
Common to fair	5.25@5.80
Canners	4.00@4.65
Heifers—	
Choice fed	8.25@9.00
Good to choice	7.40@8.20
Plain to fair	6.50@7.40
Common	5.40@6.45
Veal calves	6.00@9.75
Bulls	4.25@7.00

Big Feeder Movement Over.

The movement of stockers and feeders is much smaller now than two weeks ago. This decrease indicates that the big season is over for this year and the volume of business will be small until purchases are being made for the grass season next year. The failure of heavy fat cattle to show an advance has reduced demand for half fat feeders, but as soon as prices show an upturn that inquiry will improve. Deliveries of stock calves are being made from the big Southwest ranches, especially Texas. Some 1,500 to 2,000 head consignments have passed through Kansas City for distribution in Missouri, Illinois and Iowa. Trade in stock cows and heifers has been quiet. Stock calves are 25 to 50 cents lower.

Selected feeders	$ 7.35& 7.75
Good to choice feeders	6.85@ 7.25
Plain to fair feeders	6.00@ 6.80
Good to choice stockers	6.65@ 7.35
Selected stockers	7.40@ 7.75
Plain to fair stockers	5.25@ 6.60
Stock calves	5.75@ 8.65
Stock cows	4.50@ 6.50
Stock heifers	5.25@ 7.25
Milch cows	45.00@110.00

Eight-Dollar Hogs Remain.

Packers have had hard work to bounce the 8-cent hog from the market quotations. In the East that price remains, but in the West most

Enrich Yourself

Supplying a Great Demand

The price of beef is steadily rising, due to the shortage of beef cattle. It is no longer profitable to raise cattle on ranges. That was a wasteful method, and with the passing of free pasturage the costs are too great to leave a profit. Yet people need beef and are willing to pay good prices to get it. That is the demand you may profit by supplying.

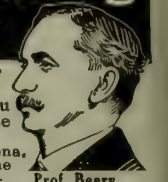
Search all over this continent and you will find no section in which cattle do as well or can be raised as cheaply as on the plains of northwest Texas. It is the natural home of the steer. Here great herds roamed in the early days. They fed on the luxurious grasses and went to market without grain. Latterly their weights and the owners' profits have been increased by grain-feeding near to the slaughtering market. But that is now too expensive, considering the high price of corn.

It has been found that the steer can be fed and finished here on ensilage and milo and kafir grain. The cost of feeding is reduced — the quality of the meat improved — a better price is secured and once again beef cattle are money-makers.

The territory available for this work is the millions of acres of northwest Texas, where the rainfall is less than twenty inches a year. It is too dry for corn, but milo and kafir thrive under dry-farming methods.

Herefords are graded up to nearly pure blood and they are the most profitable animal to feed. Weanlings can be brought up to 1,400-pound steers in less than three years, and this young beef sells well, saving a year's time, interest and feed.

Hogs thrive on the same feed. This is their climate, too, as there are no diseases in the high, dry air.



Lately it has been found that upward of one million acres of this fertile prairie is underlaid with an inexhaustible supply of pure water, near enough to the surface to be economically pumped and used for irrigation. This water makes the production of tremendous crops of feed easy and certain. With water, 50 bushels of wheat, 100 bushels of oats and 80 bushels of kafir are not unusual yields, and a small acreage of the irrigated land with a larger area of the dry land forms an ideal stock farm. Irrigation here means stock-feed insurance and is a guarantee of your profit.

The opportunity here is described in detail in a new folder just issued by the Santa Fe entitled "The Shallow Water Country of Northwest Texas." I would like every stock-grower in the country to read it as well as our leaflet, "Letters from Farmers." Then, if you are interested in following the matter further, I will be glad to place at your service the faculties of this department to assist you in finding the location best adapted to your needs.

The interest of the Santa Fe in settlers along its lines does not cease with helping them to select a location. We have a corps of agricultural demonstrators, who are employed by the railroad to help settlers to learn as quickly as possible the best crops and methods of handling for any given section. The assistance of these men will be yours without cost, and the enthusiastic letters from settlers already here will show you that their advice means a large increase of profit to those who have taken advantage of it.

Drop me a postal for this "Northwest Texas" folder and leaflet.

WORM TROUBLE IN HORSES

Strikes at the Most Valuable Section of Your Live Stock

A Proven Remedy Should Be Used at Once

From Horses to Hogs, experience with all animals has shown that there is no Worm Destroyer and General Conditioner equal to

Dr. Lion's Stock Remedy

From B. L. Robinson, Breeder of Percheron Horses, Short Horn Cattle, Poland China Hogs, and Shropshire Sheep:

"After spending hundreds of dollars for stock foods I concluded to try the Lion's Remedy and am satisfied it has no equal as a worm killer and conditioner for all kinds of stock. I like the Lion's Imported Dip equally as well.

B. L. ROBINSON,
"Unionville Center, Ohio."

From L. M. Monsees, Head of one of the World's Greatest Jack and Jennet Breeding Firms.

"We have used and relied on Lion's Remedy among our jacks and jennets, and we find that it meets with all the requirements and we consider this preparation just as staple as the best grades of sugar and coffee, and a trial will convince any stockman that it contains all the merits and quality claimed for it.

"L. M. MONSEES,
"Smithton, Mo."

From John Q. Harrison, One of Illinois' Best Farmers and Stock Growers, Owner of Onward Medium:

"Enclosed find draft in payment of 200 pounds of Lion's Worm Powders and a case of your Lion's Imported Dip. Hurry the shipment all you can, as I am needing it. I find for quick and sure results as a worm destroyer, Lion's Remedy is just the thing, and to relieve stock of lice, put their coats and skin in good condition, your Imported Dip is far superior to any of the several kinds I have used.

"JOHN Q. HARRISON,
"Pleasant Plains, Ill."

From Geo. T. McGowan. In the Express Company's Stables He Keeps 130 Horses and Thoroughly Tested the Remedy Before Offering it For Sale.

"We find the Lion's Stock Remedy a splendid seller, especially among the better class of horsemen here in St. Louis. The use of it on our stock has thoroughly convinced us of its merits. We feel sure the time is coming when it will be found in the stables of all first class horsemen in the city of St. Louis.

"NATIONAL HAY & GRAIN CO.,
"Per Geo. T. McGowan, St. Louis, Mo.
"Manager Adams Express Co. Stables."

Don't Wait Till Trouble Comes; get Catalog Now and put in your Order.

We can show you a book full of letters, just as good as these, proving the superiority of this Time Tried Remedy for Horses, Cattle, Hogs, Sheep and Poultry. But if you have a horse that is "out of fix" a can of the Remedy ordered at once will save you time and feed, and maybe a horse.

ABSORBINE, JR., antiseptic liniment for mankind reduces Strains, Painful, Knotted, Swollen Veins, Milk Leg, Gout. Concentrated—only a few drops required at an application. Price $1 per bottle at dealers or delivered.

W. F. YOUNG, P. D. F., 388 Temple St., Springfield, Mass.

of the days in the past two weeks have shown a top below $8. However, the market now is more vigorous than it was two weeks ago, and prices are 25 to 30 cents higher. Packers are showing considerable concern over the continued light weight of the offerings. Average weight of hogs now at the various markets is running 10 to 20 pounds short of a year ago. This offsets the increase in numbers, and with nearly a 1 per cent reduction in the amount of pork yielded the cost in reality is higher than current prices indicate. The hogs that came to market a year ago had had all the corn they could eat, but many of those coming now have had little more than grass. The present movement is at the expense of future supplies, and while receipts will probably continue liberal up to the middle of January, when the decrease begins to show prices will advance rapidly. A good many sick hogs have been received in Chicago recently but there has been no complaint as to general health of offerings at other markets. Some hogs are selling for stock purposes from the Kansas City market, but the movement is not general as many fear that they will spread disease germs.

The following quotations are for hogs on November 16:

Choice, 250@300 lbs.	$7.65@7.85
Choice, 200@245 lbs.	7.55@7.80
Medium weight	7.40@7.80
Light weight	7.30@7.75
Common to fair	7.00@7.30
Stags	6.25@ 7.50
Boars	4.00@5.25
Bulk of sales	7.50@7.80

The following table shows the range in hog prices in the last two weeks of November:

		Preceding Week.
Mon., Nov. 10	$7.60@8.00	$7.45@7.90
Tuesday	7.55@7.95	7.40@7.82½
Wednesday	7.60@8.00	7.25@7.70
Thursday	7.65@8.00	7.35@7.80
Friday	7.65@8.00	7.45@7.90
Saturday	7.70@7.95	7.50@7.75
Mon., Nov. 17	7.50@7.85	.....

FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat.

A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.

Made and sold by **A. W. FRAVEL, Ph. G.V.S.** Centralia, Mo.

STATUE OF GEN. CASTLEMAN.

One of the few men in this world to have a statue erected in his honor while still one of the living, is Gen. John B. Castleman of Louisville, Ky., who has been president of the American Saddle Horse Record practically since its foundation. The statue, erected in Louisville, Ky., shows the general mounted on his favorite saddler. The unveiling of the statue was an important ceremony in Louisville.

THE HORSE BREEDING SCHOOL

NEXT TERM JANUARY 5 TO 10

Breeders with money invested in the business cannot spend a week's time and their tuition fee to better advantage. Fathers and mothers need not be afraid to send their boys. Ask any graduate.

It's the greatest opportunity offered anywhere to make yourself an expert breeder, to learn to avoid the points of the breeding business that causes so much loss to stallion and jack owners every season. All of the instruction is practical and everything taught is demonstrated whenever possible. All instructors but two are expert post-graduate veterinarians doing educational work recognized by the United States Government.

SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Mares, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse Judging—Mule Judging—Barren Mares—Barren Stallions—Abnormal Conditions—Dieseas of the Foal and Fetus—Diseases of the Male and Female—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Capsules, etc.

EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lectures on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from $1 to $1.25 a day—sufficient to provide quarters for all who come.

Remember the date and prepare to be here next term. When you get here take Observation Park street car at Union Dpot; get off at 12th street and walk one block east. **Tuition is $25, which entitles all students to a free return privilege for life.** For other information address

THE RIGHT WAY

IN ALL CASES OF **DISTEMPER, PINKEYE, INFLUENZA, COLDS, ETC.,** of all Horses, Jacks, Mules, Brood Mares, Colts, Stallions, is to

SPOHN THEM

On their tongues or in the feed put Spohn's Liquid Compound. Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the disease germs. It wards off the trouble no matter how they are "exposed." Absolutely free from anything injurious. A child can safely take it

50 cents and $1.00; $5.00 and $10.00 the dozen. Sold by druggists, harness dealers, or sent, express paid, by the manufacturers.

Special Agents Wanted.
SPOHN MEDICAL CO.,
Chemists and Bacteriologists,
Box 834. Goshen, Ind., U. S. A.

Jack Sores Cured

By Using Jack Sorine. Sold With a Cash Guarantee.

O. P. WILSON SERUM CO., Kansas City, Mo.

Enclosed find my check for $5 for a package of your "Jacksorine" for jack sores. This is for a neighbor and shows on its face that your salve is doing my old jack's leg some good.

June 5, 1913. W. H. HAYS, Bloomfield, Ky.

We guarantee Jack Sorine to cure any sore on the legs of a jack or stallion, no matter how long it has been sore or what caused it. You know we have a good, reliable remedy or we could not guarantee it to cure all sores on the legs of stallions and jacks, without any restrictions. It is put up in a substantial box and sent promptly by mail. It is a paste and applied with a small brush.

Send money by bank draft or P. O. money order. Price $5.00.

THE HORSE BREEDING SCHOOL

NEXT TERM JANUARY 5 TO 10

Breeders with money invested in the business cannot spend a week's time and their tuition fee to better advantage. Fathers and mothers need not be afraid to send their boys. Ask any graduate.

Read These Letters From Breeders Who Know. They Have Never Been Printed Before.

Oct. 25, 1913. Any man that is in the breeding business should take a course in the Scientific Breeding School as it is a great help to him. **He can do twice the business with half the capital.**—J. S. Leamer, Polo, Mo.

Oct. 24, 1913. I attended your School three years ago and was well paid for going, and **have been back three times.** I had trouble in making the mare owners believe in the new method, but now they most all want the capsule. I know some who have tried to use the capsule method without going to school, but they have not had much success. I take my capsule colts to the shows and almost always win first. All breeders should attend your school.—L. R. Lee, Roodhouse, Ill.

Oct. 23, 1913. I cannot afford not to attend one term each year as there is so many new things to learn each term. **I do not see how we ever got along without this school.** I have handled stallions and jacks 41 years and will say your school taught me more in one term than all my years of practice. I could not do business with natural service alone. I get more colts with artificial service than with natural service.—T. H. Terry, Bavaria, Kans.

Oct. 25, 1913. I have been using the capsule system of breeding for four seasons with good success. I have settled lots of mares and some jennets that I know could not be settled any other way. **I have capsule mules here that are coming four years old.** I would advise every breeder that possibly can to attend the Graham Scientific Breeding School and learn the capsule system. It is here to stay.—T. E. Collins, Belleville, Kans.

Oct. 31, 1913. Having graduated from your school four years ago, and having employed the principles there taught for four seasons, will say I am both satisfied and delighted with the results obtained by the use of the system, by which means **I am enabled to enlarge my business without any additional investment,** also to obtain a greater per cent of foals, which are in every way equal to those by the natural service. Opposition to the system is fast vanishing —many customers prefer it. It brings me (from competitors who do not employ this method) the trade of those who come for the express purpose of obtaining this service. I cannot recommend the course too highly. He must either keep abreast with progressive methods or lose his business.—J. H. Hotley, New Hartford, Mo.

Nov. 6, 1913. There is no progressive move today that compares with your breeding school. Every breeder should attend and get the knowledge you offer so cheap. Since I have attended your school I seem to have better luck. It will draw you trade. I have settled mares that have been barren for years with one capsule. **More money. Less labor. Less danger of accident. Less danger of spreading disease.** —W. G. Taylor, Sedan, Kans.

Nov. 3, 1913. No man can say too much in favor of the Scientific Breeding School. **Any one feature of the school is worth more than the price of the entire course.** I am trying to get some stock men in my neighborhood to attend the next term. I wish the school all the success it can possibly have.—E. E. Hall, Kincaid, Kans.

Nov. 10, 1913. I hardly know how to express myself on such an important subject to the horse breeders of the country. I think every mare owner and stallion owner ought to attend the school and find out for themselves when a mare is fit to breed, and how to breed her. There are men sending mares here every year from a distance—mares that would never breed. If they would atttend the School **they would learn the difference between sound and diseased mares.** I will send three new men to school this year.—Hays Bealmear, Ensign, Kans.

Feb. 1, 1913. **I have attended three terms of the Graham Scientific Breeding School.** The first term was good, but it is getting better every term. I am glad to see that the people are beginning to appreciate what Frank B. Graham and his able assistants have done for the horse breeding industry of the United States. I have talked with a great many students and every one said that the school was much better than they had expected to find it. **No breeder, whether he owns a stallion or mares, can spend his time or money to a better advantage** than to attend this school. I can cheerfully recommend the high class instruction and teaching of Graham's Scientific Breeding School.—J. C. Hollenbeck, Ness City, Kans.

Nov. 10, 1913. I attended your school one term and would like to attend every term. **Have been boosting your school ever since.** I have managed to convince one man that it was just what I said it was.—J. J. Duffield, Garden City, Minn.

It's the greatest opportunity offered anywhere to make yourself an expert breeder, to learn to avoid the points of the breeding business that causes so much loss to stallion and jack owners every season. All of the instruction is practical and everything taught is demonstrated whenever possible. All instructors but two are expert post-graduate veterinarians doing educational work recognized by the United States Government.

SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Mares, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse Judging—Mule Judging—Barren Mares—Barren Stallions—Abnormal Conditions—Dieseas of the Foal and Fetus—Diseases of the Male and Female—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Capsules, etc.

EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lectures on types, judging, etc.

Horses at the Panama-Pacific Exposition

The Establishment of "View Herds"—A New Feature Pertaining to All Live Stock

To the American Breeder: It may interest your readers to know something of the special events which are planned in connection with the live stock exhibition of the Panama-Pacific International Exposition. In the first place and of first importance, there will be maintained "View Studs" of horses and "View Herds and Flocks" of other classes of live stock which will be on exhibition throughout the entire period of the exposition from February 20 to December 4. There never has been a great exposition in which the visitor has not felt a disappointment because of the fact that the live stock exhibits were limited to a few days late in the fall, thus preventing a great majority of visitors from seeing them.

It is a well known fact that every visitor that passes through the gates of any great exposition is interested in some form of live stock and the maintenance of these "View Herds" by their several breed record associations will entirely remove this objection, and at the same time give all visitors an opportunity to see selected animals representing correct types of the several breeds. It also affords the breeders a nine months' period in which to book orders for future delivery, instead of a ten days' period as has been the case in previous expositions.

The great show of draft horses, the class of paramount importance to farmers, will occupy prominent position in the series of regular live stock exhibits, but the opening event in the live stock department will be a universal polo tournament which will be participated in by the polo teams of all countries where the game is played, and also by the polo teams of the armies of the world. This tournament will be under the auspices of the American Polo Association and directly in charge of the executive committee of the Pacific Coast sub-committee of that association. A whole month will be devoted to these matches and they will be played on especially prepared grounds upon which the exposition has expended $15,000 in the way of grading, filling, seeding, etc.

As the only place where the breeders of harness horses can show the results of their work is in the speed ring, and in competition, there will be held two great harness race meetings, one in June and one in October, in which there will be hung up a total of $227,000 in stakes and purses. There will be two pacing races for $20,000 each and the entries for these are already very numerous. The entry fees are nearly enough to cover the premiums and more coming later.

One of the very important special events will be the endurance test which is to determine the best type of horse for army use. This has never yet been done and this test will be conducted under the supervision of officers of the United States army, especially delegated for the purpose. This will not be a race in any sense of the word, nor will it be a contest between breeds. Its whole object will be to determine the correct type of horse for use in the United States army, and when this is determined the breeder wishing to supply this demand can direct his breeding operations accordingly, in the knowledge that he will have the United States government for a steady and profitable customer. And as the type of horse needed for army service is the same in all countries, the American farmer who breeds of this type (once it is determined) can be assured of a market for his product among the armies of all countries as well as our own.

The cavalry events will be participated in by the cavalry of the world. These will be in direct charge of the United States army officers and the details are now being worked out by officers appointed for the purpose. These events will be modeled somewhat from those which have taken place in France and Germany in late years, but with modifications which will best suit them to the conditions now existing in the cavalry of the world.

The saddle horse, which is again coming into his own, will have full recognition both in the premium list and in the horse show and other special events. The Saddle Horse Club will be organized from among the residents and exhibitors, and its members will act as heralds for the department of live stock, and as escorts at special functions.

The Shetland ponies will have full recognition and in addition to the classification given them in the breeding classes, there will be special events provided for their participation especially in the Children's Pet Stock Show, which will be held late in the season when the children will be invited to participate in a show which will be wholly their own.

In this brief mention of the horse interests in the Panama-Pacific International Exposition it is impossible to give details, but visitors who come to the first great exposition that was ever held in the Pacific Coast area and the first exposition which is co-existent with the event which it celebrates will be assured that there is something doing all the time. —I. D. Graham, Assistant Chief of the Department of Live Stock, Panama-Pacific Exposition.

Our Special Subscripton Price

Co-operation between the publisher and the subscriber means a saving in time and money for both. We are asking our readers to co-operate in popularizing our special three-year subscription rate with a view to making the lowest possible subscription price. In order to maintain that rate, we must have the co-operation of all our subscribers.

Every one must use his best efforts in encouraging wider circulation. When the opportunity presents itself, speak a good word for the American Breeder. Every reader must realize that this paper fills a peculiar field of its own—a field in which no other publication has given the same satisfaction. Our service in this field can be doubled and trebled and the benefits to every reader increased, but in order to do this others must be introduced into the American Breeder family.

The saving, from the publisher's standpoint, by making all subscriptions for three years, is largely because it will not be necessary to change the subscription list every year or send out expiration notices or have the extra work of looking up those who fail to renew promptly, and who always request the back numbers. This may seem trifling to you, but in the work of keeping a mailing list in shape it is an important expense. There is also an advantage to the subscriber. He is not bothered about renewing every year; he takes only one-third the chance of missing an important copy now and then which cannot be replaced; he saves time and money.

The saving to us is such that the standard of the American Breeder can be maintained at the price of three years for $1.00.

Until we satisfy ourselves as to the practicability of this plan there will be no published yearly subscription price, the only advertised subscription price being three years for $1.00. We will try this a reasonable length of time. Subscriptions which have not expired will be extended (for $1.00) three years beyond the time for which they are already paid. A good number will expire soon. If all these renewals are forthcoming promptly without further notification, and if our readers generally, take advantage of the rate to get neighbors and customers on our list of new subscribers, we will continue this price, Those who wish to encourage this co-operation can do so by either renewing their own subscription immediately or by sending in the subscriptions for their friends.

As a trial we will let this offer stand until January 1, 1914. Until that time all subscriptions will be received at this office at $1.00 for three years.

KEEPS WHAT PUBLIC WANTS AND GETS CASH OR NOTE AT TIME OF SERVICE.

To The American Breeder:—As I have been a subscriber of your paper since the first issue, and have been greatly benefited by its publication, I feel like saying a few words about the breeding of fine stock. I have devoted my life to the study of stock and the more I learn the more I see there is to learn.

I have been breeding for the public for 16 years; have always bought the best registered stallions and jacks that I could buy. I have never tried to compete with the man that had grades and cheap stallions, for I do not like plug stock. But dealing with the public for 16 years as a breeder I have this year changed my mind some. I find that to please the public you have got to have all kinds of stock. I have two public breeding stables, one here in Wills Point and the other at Grandsaline. I have two imported German Coach stallions, one 1,900-pound Percheron, one Denmark saddle and harness stallion, one 1,200-pound black Mammoth jack, one 1,000-pound, 16-hand jack. This stock I stand for cash first service or note, with interest, due in fall. But there are lots of half breeds that are being stood and when you get a colt you owe the man anywhere from $5 to $10. If you pay it is all right; if not, there is not much kick coming for the man that owns the stock has not much invested, and has probably sold or traded the stock, and he will not make any kick about people not paying him for the colts. If he does, he knows he can't get anything out of them. So you see he tells the people he has had a fine business with his stock and that he has no trouble in collecting, and that he will show colts with any stock that ever walked the earth. He tells them that he don't want any money unless he gets a living colt, also tells them that anyone that wants to pay for a colt until it stands up and sucks is getting something for nothing.

I, for one, will never stand a $2,000 jack or stud at same price and terms with one not worth more than $200. And for this reason I have bought a

nice black jack worth $250, and am in the market for a fine half breed stud worth about the same. Then I can suit all kinds of people. This part of Texas is full of half breeds and good ones. In fact, look about as good as full blood, but when you breed to one of this kind you only have quarter instead of half blood. I do not like to do this, but am forced to. I have always let my customers breed until they got a living colt, but I get the cash or note at first service. If the mare died I let them put one in her place. I believe I have bred more mares for the public than any one in the South, and have put the country full of good stock and made some money for myself. The last few years I have hired all done and not been at either place of business any on account of my practice.

For 26 years I have studied the veterinary profession and being in the horse business all the time had advantages that most people never had. I graduated in 1900 and took a special course in the veterinary college this year, and it takes all my time to care for my practice. If I was at my stables myself I would not want any cheap stock, for I would show my customers the difference in raising fine stock and common ones.

I keep paddocks to put my stallions and jacks in so they will get plenty of exercise and sunshine, which is so necessary. The American Breeder has done more for the live stock interests than all other papers combined. I have paid for it and sent it to my customers and got fine results. I am sending you my check for $10 to have the paper sent to them again. I keep four fine stallions and jacks at my other stables 25 miles from here. The time has just about come when farmers will not breed to anything but the best of sires.—H. T. Constant, Van Zandt County, Texas.

AN OKLAHOMAN'S SUCCESS AND TROUBLE WITH PERCHERONS.

To the American Breeder: I subscribed for your paper during the Oklahoma State Fair, for three years, and am well pleased with it. I bought two mares three years ago and paid $400 for one and $200 for the other. They weigh 1,650 pounds each in working condition. I raised two colts last year from them. One was born April 1, 1912, and weighs 1,450. It is a stallion colt. The other was born May 1, 1912, and weighs 1,400. It is a filly colt. I raised two more this year from the same mares. One was born May 1, 1913, and weighs 840 pounds, a stallion; the other one was born May 18, 1913, and weighs 910 pounds, a filly colt. I bought two more mares this last spring. One raised a colt but am having bad luck with it. It has been sick ever since it was born It has something like the navel disease, and would be glad if some one would tell me what would cure it. This colt's mother weighs 2,050 pounds in working condition and she is 5 years old. Colts like mine are valued at about $200 each at weaning time. There are not many raised in this county. There are a few starting small herds.—F. N. Garner, Pawnee County, Ok.

A PAPER YOU CAN USE.

To the American Breeder: As I am a reader of the American Breeder, and would not like to be without it, as one can get so much good advice from it, I am now sending you a copy of an ad which I wish you to run in the next two issues of the paper and then send me your bill for advertising.—H. E. Hander, Cass County, Mo.

SERIES OF STOCK SALES TOTAL OVER $300,000. GRAY AND SORREL MULES THE SPECIALTY IN ONE SALE.

To the American Breeder:—Some time over a year ago the Commercial Club of Warrensburg, Mo., began public sales at Jones Bros. barn, and to date have held 11 sales. The sales are intended to be monthly, but at times of extreme hot or cold weather they have not always been held. E. M. Carringham is secretary. Jones Bros. are the heavy contributors and also the men who hustle for big buyers.

Anybody can sell any kind of live stock without charge. The farmers have sold a great many horses and mules, thoroughbred hogs and cattle. These sales most always have from three to ten shippers on hand. In fact, the shippers have bought most of the stuff of late, since our last short crop.

The last sale began at 11 a. m. and ran until dark and footed up $48,000 worth and it was practically all sold; very little by-bidding, as the buyers were there and everything brought all it was worth. Mules seem to be at their zenith; horses seemed a little dull. The specialty of the last sale was gray and sorrel mules in car load lots, and the sale was so advertised, Jones Bros. sending out telegrams and telephone messages all over the South that they were making a special effort on gray and sorrel mules for their sale.

The first car load of gray mules (large cotton mules), brought $237.50 around, and they were beauties. Another car of smaller grays brought $195. First load of sorrels sold for $225; cottoners, second load $195. Six sorrel wagon mules in one bunch brought $250 a head. Other mules sold in pairs and half dozen lots, horses in pairs and single animals. The 11 sales held by the club have averaged right at $28,000 each.

While we are on sorrel and gray mules, I want to mention one man near here who raised one sorrel and one gray mule this year and sold them for $280 at weaning time; the highest price in this locality. And still some people will kick on an off color jack. It would do you good to come to our next sale which will take place Saturday, December 6—T. L. Bradley, Johnson County, Mo.

ECONOMY IN STALLION FEEDING.

To The American Breeder:—I am interested in the subject of "Stallion Feed Wasted," which appeared in your last issue. I am somewhat of a "crank" on the feeding of stallions when out of service.

With the beginning of September I commenced feeding my stallions (a Percheron and a French Coach) on carrots mostly, instead of a grain ration, with bran once a day or once in two days. I feed them about 15 pounds of carrots a day each with three pounds of bran and what hay they will eat, not what they can waste. Later when my sorghum and some good, clean, sound millet are fully cured I feed them each a bundle of the cane at noon in their yard and a bundle of the millet at night. The millet is not cut until it begins to ripen and the top seeds in the head are beginning to turn yellow, then it is cut with a binder and shocked until thoroughly cured, when it is put in the barn ready for feed.

In this way my horses are kept cheaply and in the pink of condition and are prepared to make the best use of good oats from the first of March on during the breeding season. I find that my horses do better service treated in this way than when fed on grain all the year.—Lester Jones, Edmunds County, S D.

MEETING OF HORSE BREEDERS.

To the American Breeder: The seventh annual meeting of the Kansas Horse Breeders' Association will be held at Manhattan, Kas., Jan. 1 and 2, 1914. An interesting and instructive program is being arranged. Every stallion owner should make a special effort to attend this meeting as some very important matters are to come up for discussion. The one of particular importance is the matter of a more practical lien law. The present Kansas law is very impractical and unfair to the stallion owner, and the only way we will ever get a thoroughly practical law is for the stallion owners of the state to get together and put forth an organized effort to secure the kind of law the need.—C. W. McCampbell, Secretary, Manhattan, Kas.

HORSE BREEDING LESSONS STARTED SOMETHING.

To The American Breeder:—I have been in the breeding business thirty-one years and had about reached the conclusion that I had all the substantial knowledge on that subject. I had kept records of certain cases and conditions and watched the results during this entire time, but I had my eyes opened when I studied those horse breeding lessons in the American Breeder last spring. I found that I had very little correct conception of horse breeding. Those charts and explanations made things very clear to me in many respects, and it has made a student of me. I now read and study everything I can get, and expect to finish by taking a course in the Breeding School in the near future.

After making a careful study of my record books and finding that only 36 per cent of the mares bred at my barns produced living foals, I concluded that there must be something I did not have. I knew how to make examination in the mouth of the womb to see whether it was open or not, but this was about the extent of my ability. I have discovered that before one can proclaim himself a horse breeder he should be able to make a rectal examination; also to be posted on all of the organs, to be very proficient.

This is a wonderful study and I am getting more interested each day. I shall not quit until I can make a complete examination of a mare and describe every condition connected with fertilization. Then I shall expect to get from 80 to 90 per cent of the mares in foal which I breed. There is a reason for every mare failing to produce and I believe every common breeder can acquire that information if he cares to.—T. W. J., Nebraska.

A 1,550-POUND CAPSULE FILLY.

To the American Breeder: Enclosed herewith is a photograph of my capsule filly sired by Minuett 61141 (65708). She is a grade Percheron; age 26 months; weight 1,560. The forage she gets in the summer consists of prairie hay; in the winter, from November until May it consists of wheat and oat straw. I have never had hay for my horses in the winter. As a balanced grain ration

she gets oats when I am fortunate enough to have any; when I have no oats she is mighty glad to get anything.

Her dam with one cross of Percheron raised under the some conditions, weighs 1,700 pounds. Her second dam was just a mare of the draft type; in nice working condition she weighed 1,400 pounds. I mention the feed they get for the reason that some farm papers run so heavy to alfalfa they have we people here (that never saw any) almost persuaded that it is impossible to raise a good animal without it.—G. S. McDonald, Towner County, N. D.

TO SHOW CAVALRY TYPES IN IDAHO.

Representative types of cavalry and artillery horses will be sent from the military post of Fort Riley to the Lewiston, Idaho, horse show December 10 to 16. Four horses from the mounted service school and four from the Sixth Field Artillery with one limber and the necessary equipment with a detail of soldiers will be used in the exhibitions. Captain L. R. Ball and Lieutenant Waldo C. Potter will ride the school horses.

WHY DOES HE HAVE TO?

To the American Breeder: I have two black jacks registered, one six years old, 67 inches high, weighing nearly 1100 pounds; one three years old, 63 inches high, weighing nearly 900 pounds. Now I have to stand these jacks for the pitiful sum of $10 while all of the scrub jacks get the same money. Why should we that have good jacks and horses have to compete with them? Can we remedy this in some way? Let's hear your view through the American Breeder —W. A. Winningham, Fannin County Texas.

Farm Horses at the Garnett, Kas., Stock Show.

Questions and Answers.

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problms of on reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

587—WASHING A STALLION—How often would you wash out the horse after the breeding season?—South Dakota Subscriber.

REPLY—Every month or two after the season is closed the stallion should be cleansed out with a bran mash. Take hot water and bran and mix it well together; insert handful after handful of this material, working it around into the different parts so that the entire surface is covered. Do not wash the stallion; allow the bran to come out at its leisure.

588—DOUBTFUL FERTILIZATION—I have a seven year old mare that has not been with foal for three years. When she came in heat I examined her cervix and found it open enough to insert two fingers, and on account of the pus discharge I treated her with the soda treatment, and bred her at the close of the period. At 21 days I tried her again; she showed signs of being in heat, but would fight and kick the horse, so I did not breed her, and upon examining the cervix I found it closed tight. I did not try to do anything more with her. Did I do the right thing? If not, kindly give me your advice in the matter.—North Dakota Subscriber.

REPLY—Your mare might have been with foal, but if the discharge, as you describe it, was extensive, it is not likely that she would conceive during that heat period. It is a good policy not to breed a mare under the above conditions. As you undoubtedly have had an opportunity to know how this mare acted when she was in heat, the fact that she fought and kicked at a regular period should be considered.

589—DESTRUCTIVE HINNIES—Are hinnies as playful and destructive as young mules?—Wyoming Subscriber.

REPLY—There is very little difference in the disposition of hinnies and mules. If you have several of these to run together they are not very destructive. One or two hybrids raised in the open where they have an opportunity to romp occasionally cause some damage, but where they play to gether are less liable to be mischievous.

590—MARE REFUSES STALLION—I bred a two year old Percheron filly for my neighbor. She took the horse three times; then when retried three times she would fight and seemed to be tight. She would throw her water way out behind her, and I wouldn't breed her. Was I right or wrong? Is this mare in foal?—Oregon Subscriber.

REPLY—You did right in refusing to breed this mare, as she was probably in foal. She may have aborted since.

591—BREEDING QUESTION — A bought a full blooded imported Belgian mare at B's sale and B guaranteed her to be in foal from C's full blooded imported Belgian horse. C was at the sale and said that his horse was imported and had the papers and was all right. A's mare had a filly colt and when A came to get the filly registered he went to C to get the number of the stallion and he claimed the papers were lost. If the papers are not found who is responsible and what would the damage be?—Ohio Subscriber.

REPLY—The contract was made between the owners of the mare and the stallion at the time she was bred. B must make the guarantee good. B, however, can collect damages from C if the stallion was represented as registered in a recognized association. B will have to comply with his part of the contract by paying the service fee before he can collect damages from the owner of the stallion.

592—AMERICAN SADDLE HORSE BREEDERS' ASSN.—Will you please publish the name of the Saddle Horse Registration Co.?—Kansas Subscriber.

REPLY—Write to Roger R. Lillard, Secretary, Lawrenceburg, Ky.

593—FERTILE STALLION—In what state, or states, if any, have the courts ruled that if a stallion is fertile with one mare he is considered fertile?—Texas Subscriber.

REPLY—No state has ruled that if a stallion is sure today that he will be sure tomorrow. Unless otherwise stated in a special agreement a sire is considered fertile when he has proven to be an average breeder.

594—DOCKED HORSES—Why are imported horses docked? Is it inferior horses that are docked and will they breed with docked horses for their fancy trade in foreign countries? Is it against the law to dock horses in the United States? Why are part of our home bred registered stallions docked? Are the long tail imported horses considered superior over docked?—Colorado Subscriber.

REPLY—In Europe flies are not as numerous as in this country and most of the horses whether full blood or otherwise are docked. So far as the value of a stallion is concerned, docking will not change it. It is not compulsory to dock horses in Europe, either good or bad. It is against the law to dock horses in most of the states in this country.

595—CONTROLLING THE SEX—Do you believe there is any way to control sex in colts?—Florida Subscriber.

REPLY—No.

596—JENNET FAILS TO FERTILIZE—I have a Mammoth Jennet six years old that had a jack colt two years ago and she has not had a colt since, and I can't get her in foal. I have been using the capsule system and have had good success except on this one jennet. Most every time I bred her this season there seems to be a discharge in her vagina the color of cream and rather thick. I gave her a creolin treatment, but it did not stop this discharge. Her insides seem to be dry as a capsule don't slip freely. She is thrifty and in good flesh. Please give me any advice you think might fix her O. K.—Kansas Subscriber.

REPLY—Use the iodine treatment twice, two weeks apart; follow with the saline treatment at 115 degrees three times, three days apart.

597—ALFALFA FOR STALLIONS—I would like to ask through your paper if alfalfa hay is advisable to feed to stallions after the breeding season is over.—South Dakota Subscriber.

REPLY—Alfalfa can be made a part of the roughness to a good advantage. Be careful that your stallion does not get too fat. One fourth or one third of the hay ration might be composed of alfalfa with safety. The change should be made gradually, and it might be necessary to mix the other hay with the alfalfa. If the stallion is noticed to urinate to any great extent, the amount of alfalfa should be diminished. Some stallions eat more roughness than others.

598—BREEDING AGED MARES—In breeding an aged mare is it better to put her to an old or a young stallion?—Florida Subscriber.

REPLY—The age of a stallion has little to do with fertilization when live spermatozoa are discharged. A real old mare mated with an old stallion, has, in a few instances, impressed the aged appearance on the progeny, but these cases are very rare. Select the best individual to mate with your mare, regardless of age.

599—PER CENT AND EXERCISE—What per cent of mares bred is an

(Continued on page 22.)

THE RECOGNIZED JACK REGISTRY

The Association of Stallion Registration Boards is an organization made up of representatives from the several states having stallion or jack inspection laws. The last meeting was held in Chicago during the International Live Stock Show. The Association of Stallion Registration Boards passed a resolution recognizing the Standard Jack & Jennett Registry of America. This will take effect immediately.

The Standard Jack and Jennet Registry of America is a comparatively new association but it has made wonderful strides. It is the largest jack registry in the world. It has 38 officials, each one actively engaged in jack production, except the secretary. Practically every section of the United States where jacks are bred extensively, has an officer in this Association.

Those who wish to have their stock recognized as registered stock should prepare for the future by sending for application blanks to this record association. It is quite likely that in the very near future many states will have the same requirements for jacks that now exist for stallions. Those who have not registered their stock must then be advertised to the public as grades or mongrels. Since the government withdrew its recognition to all American associations, the standard for stallions and jacks has been made by the Stallion Registration Boards. Whether the law is satisfactory or not those who have jacks or jennets that can be registered should have it done now. The Standard Association has passed a resolution (to take effect June 1, 1914) which makes the requirements much more stringent, and which will cut out a lot of stock. It is not necessary to trace blood lines at the present. Jacks measuring 58 inches from the highest central part of the withers to the ground; 62 inches heart girth, and seven inches bone, can be registered. Jennet requirements are 56 inches from the highest central part of the withers to the ground; 60 inch heart girth and 6¾ inch bone around the front leg at the smallest part between the ankle and the knee. Any color admitted.

Remember that these requirements change the first of next June. Now is the time to attend to this while the rules are yet open. Those who have registered animals in other Associations may send their certificates, with the application properly filled out, and have the animal registered with the Standard Association free of charge, provided the animal fills the requirements of the Standard Association.

Application blanks may be had by addressing Wm. E. Morton, Secy., 920 Scarritt Bldg., Kansas City, Mo.

FERTILIZED MARE THAT HAD BEEN NON-PRODUCER FOR 20 YEARS.

To the American Breeder: I will tell of my experience in breeding old mares. P. J. Warner, Weston county, Wis., has an old mare that had her last colt 20 years ago until last spring when she had a fine mare colt, the first in 20 years. She was 25 years old last spring. This mare was bred a good many years without results. To get the colt, I bred her once with instrument and once in natural way, and last spring I bred her once when the colt was nine days old, and when I last saw the old mare (the last of July) she had not shown any signs of being in heat.

I often breed mares with the horse and take the semen from the mare I bred and insert it into another mare that the horse never went near. I got one in foal with the impregnator and the other one I missed, so that I knew there is something in it. I try never to let my horse cover a mare that is diseased if I know it, and I watch very closely, and if I see any "brick dust" in the water of the mare when I try her, I keep my horse away from that mare until she is cleaned. Even if I lose one or two mares by the refusal to breed diseased mares, I think I am ahead of the others by not spreading the disease.—Reuben Warren, Dunn County, Wis.

SUCCESS WITH WORKING STALLIONS.

To the American Breeder: I will write a few lines to let the subscribers of your valuable paper know how I use my team of pure bred draft stallions. To begin with, they are thoroughly broke to work double. I handle both in and out of season alone. I cut 65 acres of oats after the season, besides putting up 40 tons of hay with them. One is a Percheron and the other a French draft. I keep them in good working condition and I think I have better success than if they were stall fed and no exercise only what they get in paddock. While they do not look as good as some that are pampered and babied, I think I can show as good colts as any of the horses around here. If the mare owners would insist on the stallions being worked, I think they would get better colts. My horses weigh 3400 pounds and is coals black with just a little white on forehead. If I own stallions all my life they will have to work. Don't expect of your colts what the sire did not or could not do. You will have little success.—W. W. Van Sickle, Fayette County, Iowa.

LESSONS OF A COLT SHOW.

To the American Breeder: I have two jacks and one Percheron stallion. I stand the jacks at $10 and $12 and the horse at $15 to insure a living colt. Last spring (the first crop of colts from the horse) he showed 47 colts; two died; one died at 12 days old with navel ill; the other one only lived one day.

I had my first colt show this year. I gave the season free on best colt. The best colt weighed 672 pounds at five months old; the second best weighed 600 pounds; it was a month younger. The owner of the mare was asked if he would take $150 for the second best and he refused. The dams of these two colts are grade Percherons, at least three-quarter Percherons. I had Mr. Brown to judge the colts. He sold stallions for Crouch & Sons for six years and he said he never saw any better colts anywhere than those two. Of course we had quite a number of colts at the show which were hard to beat, but they do not rank up with those two, and the reason is that they did not have the mothers. It takes a good mare to raise the best. These colts belong to J. S. Fairfield. His mares are the best in the neighborhood. The old mare weighs 1300 and the young mares 1500.

The sires of our mares are too small. There have been so many race horses and saddle horses bred here that the mares are smaller now than they were 20 years ago. The farmers are beginning to want large mares now. We have four Percheron stallions in this county now; I bought the first one last March a year ago, but we need some more yet. Colts have not been bringing as much this fall by $20 as they did last year. The mule colts here only brought about $60. An unusual scarcity of feed is the cause.—W. J. Law, Stoddard County, Mo.

50 INQUIRIES FROM TWO ADS.

To the American Breeder: Last February I had an ad of one inch for two issues in your paper and received 50 inquiries and made a trade. I advise any one that has breeding stock for sale, or in the market for the same, to advertise in the American Best results will follow.—Louis Knopp, Benton County, Mo.

EDUCATE YOUR MARE OWNERS.

The owner of every stallion or jack has a certain amount of expense regardless of the amount of business he receives. The income over and above the running expense is his profit. If a breeder simply "breaks even" the business is not very encouraging. If a business can be doubled with a little extra expense, it usually more than doubles the profit.

There are many breeders who do not make any pretense at advertising their business. They contend that they are too well known and that the progeny of their stock has reached the stage that advertising is not necessary. These breeders are standing in their own light—the additional business means clear revenue.

Many of the best stallions and jacks in the country are not patronized as they should be, because customers have not been encouraged. A lot of mare owners do not give the subject of breeding any thought. Many of the losses they suffer could be prevented if a little more information was provided for the mare owners.

The very best method of advertising good stallions and jacks is to take advantage of our "Special Mare Owners' Editions" which consist of five issues; the last issue in January, two in February and two in March. January is an excellent month in which to get these men interested, as they read better at that time than any other part of the year. When they are once started they will follow these papers through, reading each issue carefully, as a rule. They will realize that it means money to them.

The cost of these five issues in clubs of ten is $1.00; each additional subscription will cost 10 cents. Each subscriber will receive five papers; 100 of these subscriptions will cost you only $10.00. Every time a customer receives that paper he will think of the one who has paid his subscription. We notify each subscriber by mail, telling him you have paid his subscription and request him to call and thank you personally for the favor. This will create a closer union and result in more business for deserving stock, a better per cent of foals, less loss of colts and a more satisfactory patronage. One extra colt should more than pay for 100 subscriptions.

This education will last a life time. It will settle many breeding problems in a community, which will help to prevent the spread of infection among mares. Nearly every breeder knows of a lot of men that he would like to interest. This will serve as an excellent introduction. Those who are building up a permanent business must strive to win their acquaintances and add new customers. It is very easy to get a large list of names of the substantial mare owners in a vicinity. When 100 papers are sent into one section it is remarkable what a change is brought about. Many of the absurd ideas about horse breeding are forgotten. These papers can do more talking during one season than the breeder can do in a lifetime. It is the real foundation for the breeding business. Where could a breeder spend $10 to a better advantage from an advertising standpoint? One who is not a subscriber can include his own name for the five issues at 10 cents, or he can take advantage, for himself, of our three years for $1.00 offer. Practically every breeder that has used the "Mare Owners' Editions" has been well pleased with the investment. It is an education for the entire community.

Send your names and addresses as soon as possible. All of them should reach this office before January 1st.

A COUNTY LIVE STOCK EXCHANGE.

The need of something like a county live stock exchange can be seen in almost any stock raising section of the corn belt in the course of an average year. But to be successful in the sense that it really serves the community and does not degenerate it should have some supervision by a person in authority who knows live stock values and business methods as well. In most communities its greatest service will be in facilitating the distribution of breeding stock and in giving a better idea as to the value of such animals. If it is allowed to degenerate to the status of a "dinky market," while it may aid in distribution it will at the same time discourage production and improvement.

Counties which are already enjoying the service of competent "county advisers" or "county agents" (as some prefer to be called) are in the best shape to establish such an exchange. Farmers of these counties are already learning the advantage of every day co-operation and exchange of ideas, and are ready to accept competent counsel concerning the value and the disposal of their animals. It is the county agent who until the education of experience has made it unnecessary, should be able to advise any farmer as to the kind of breeding animal he needs, and what he should be willing to pay, and to also advise such other farmers in the county as are producing these animals, which of their surplus are fit to offer for improving the live stock of the community and which should be sold for meat.

Almost any one familiar with live stock affairs in the corn belt has seen good young pure bred bulls and boars sold in public sales at little, if any, more than they would have brought at the same age for meat, while about the ringside sat farmers who were breeding their females to inferior sires. Their inaction came from a variety of causes, nearly all of which could be corrected by a good "county advisor" and a live stock exchange. Some mistrusted the representations of the seller or auctioneer (often without good cause); some thought the breed being offered was not the best, not having learned that almost any of the popular breeds contains all the good qualities of its class and that all are largely dependent on care, selection and intelligent mating to ring them out; some, we are sorry to say, did not wish to contribute to a neighbor's success; some really did not know that the animals being sold were good values; some did not have energy and power of independent action enough to take a step which they really felt their business needed. A county live stock exchange and a competent agent would help to remedy almost every one of the above listed difficulties and with them once remedied the grain, forage and pasture production, as well as the live stock production, of any county would immediately begin to improve. There is probably no line open for a more effective increasing of rural wealth.

Stallion County Breeders' Organizations

The time has come when it is necessary for breeders to have a county organization. Stallion owners can form these associations and later take in other breeders if they care to. Some public spirited stallion owner can telephone a few other prominent breeders in the county and form an association. A set of by-laws should be adopted and officers elected at the first meeting. Members should be solicited. A membership fee of $1 or $2 should be paid annually by each member. This will place in the treasury enough money for advertising purposes so that every breeder in the county can receive postal card notifications as to the time and place of the regular meetings.

A general understanding among the breeders should be had for the betterment of live stock and breeding conditions. No better plan could be adopted than to allow each member at the meeting five minutes to talk before that body. This should be extended to every member. This will bring out a lot of valuable information and develop the faculty of speaking in public. Every breeder should be able to speak before an average audience. The chairman of this association should encourage public speaking. Some may be embarrassed and refuse to speak at the beginning, but if each member present can be induced to speak just a short time at the beginning, he will soon acquire the habit and do his part of the talking later on. It is not difficult to speak before a body of men after one has had a little experience and there is no better place to start than at a meeting of this kind. One of the members should be the timekeeper and not allow any other member to speak any longer than the time decided on in the beginning. The first time speeches may be limited to not to exceed two minutes and have a particular subject up for discussion.

This is a very good way to start the meetings. As each new member is introduced he will need a little coaxing in order to get him started with the others. Nothing adds to the life of a meeting of this kind like having a large number of men who are willing to talk for the benefit of the association. Each member must interest himself in getting others to join. After a little time practically every breeder in the county can be placed on the mailing list. A card should be sent to each of these men inviting them to come and join the association, also giving the date of the next meeting. This will not be very expensive and in a very short time a good membership should be built up in every county where horses are bred.

There are many live subjects that could be discussed to an advantage at these meetings, but the first and most necessary part of this program is for some public spirited man to start it. He must spend a little time visiting or writing breeders or telephoning them, asking them to meet at a certain time and place.

There are many benefits to be derived from these associations. For instance, if a mare is lost and moved to some other county, the secretary can correspond with the secretary in other counties and locate the mare and find out all about that particular case.

Another important feature is that the lien laws in this country are not satisfactory. The campaign which the American Breeder made in 1912 resulted in getting several states to adopt satisfactory laws. If there had been a county breeders' organization in every county in a state where laws were wanted, the results would have been much better. This can be made a state if not a national affair. The different county organizations can discuss such problems as they wish to bring before their state meetings and instruct the secretary to represent them. All of the secretaries can meet at their state meetings and allow as many other members to attend as care to. If a county has a membership of several hundred they can have great weight in political affairs in their county and state.

The president, secretary and treasurer might be elected for a period of one year. Each township should have a vice president whose duties would be to secure the membership of all other stallion or jack owners in a particular township. It is not necessary to have a lengthy set of by-laws, but care should be taken to elect a president who has executive ability. A secretary should be qualified from a clerical standpoint. A meeting should be held at least every month during the winter months and the president should have authority to call special meetings for special cases at any time.

Practically every other line of business is organized. We cannot see why the horse breeders cannot form an organization and protect themselves in numerous ways. Every man who owns a stallion or jack should be given an opportunity to become a member.

We hope every county in the United States will form breeders' associations immediately and hold a meeting at least once a month during the winter months. We would be glad to have the name and address of every secretary of such association. We expect to foster this movement and will invite suggestions from breeders everywhere.

TEXAS WON STOCK JUDGING CONTEST.

The Students' Judging Contest at the International Live Stock Show was won by the Texas Agricultural College team. The Missouri Agricultural College was second, Purdue University third, and the agricultural colleges of the following states ranked in the order given: Ohio, Iowa, Ontario, Manitoba, MacDonald, Canada, Kansas, Oklahoma, Pennsylvania and Nebraska.

INTERNATIONAL PHOTOGRAPHS.

It has been our custom to run a large number of instructive photographs and we are sorry to disappoint our readers concerning the International Live Stock Show. Weather conditions were such that but few photographs could be obtained. We managed to get these during a short period of sunshine. They are not as good as we would like, but the best we could do. We have received so much favorable comment concerning this method of reporting shows that we expect to continue to print accurate pictures of representative animals at the leading live stock shows in the country. This gives our readers an opportunity to know what prize winners look like, and is an education within itself.

THE SUCCESS OF A TRAINED MAN.

To the American Breeder:—Henry Dreher of Cedar Rapids, Nebr., student of the Graham Scientific Breeding School, handled my stallion this season, and will say that Mr. Dreher is a very thorough breeder. If they turn out many like him from that school, they are certainly a success. He bred over 300 mares this season and they seem to be mostly in foal.

A great many mares in this vicinity are infected with the barren germ, and Mr. Dreher treated very successfully and latter got in foal a great many mares that had not had colts for years. If one or two men like Henry Dreher could be put into every county, people would know more about horse breeding than they do now. In comparison would say that Mr. Dreher in the horse breeding business is like a modern express train compared to old prairie schooners drawn by oxen. —Chas. Lathe, Whiteside County, Ill.

LIKES TO BUY FROM OUR ADVERTISERS.

To the American Breeder: I have answered your card and written a few thoughts in accord with your suggestions. You may put our ad in as my son said. Will buy a jack from some advertiser in your paper. Would rather buy him from some one who has graduated from the Breeding school, then he would know what he was selling me. I am very much pleased with what my boy learned while there.—Wyatt Carr, Story County, Iowa.

THE PERCHERON FOR "MONTANA MAN."

To the American Breeder: I notice a Montana brother is in the market for a stallion suitable to breed on small mares. Excuse me if I say that the Percheron is best suited for the purpose, for its action is in keeping with the small horse, and the first cross will go as express and general purpose horses. As for bone, I have a three-year-old Percheron that weighs 2,000 pounds. His birthday was June 9, 1910; he has plenty of bone. His hind leg below the hock at smallest place is 12½ inches; front below knee is 11 inches. I am feeding him two quarts of oats morning and evening; no other grain, only alfalfa hay. Nothing is left to eat in his reach. I think he would get so fat he could not work. I drag the roads with him and do other light work for exercise.

We have no colts to show yet, but our per cent is high for spring. I water this colt from a bucket, fresh from the well; in hot weather he drinks 24 to 28 gallons a day. I always water him the first thing in the morning; then after feeding an hour or so; then at noon before feeding, and not too soon after. I am careful to not give him as much hay as he wants. His bowels are always free, but not loose enough to muss his stall. He has a dirt floor and no bedding (not by choice); roomy stall; south door open with bars across.—W. C. Edwards, Cowley County, Kans.

"EVERY STOCK RAISER SHOULD TAKE IT."

To the American Breeder: I have been a subscriber to your most valuable paper for about five years, I think, and feel very much in need of the good advice I find in the paper, as I have been in the horse breeding business for over 20 years, both draft and roadsters. I think every stock raiser should take the American Breeder and read it carefully each issue. I wish you all kinds of success.—Ernest Klein, Becker County, Minn.

Hotel Convention 12th and Broadway, Kansas City Mo. Large, airy rooms, good beds. Special rates to students of the Graham Scientific Breeding School. Two persons in one full bed, 35c per day each. One person in a full bed, 60c per day. Good restaurants in connection and nearby. Take Observation Park street car from in front of Union Depot direct to our corner. Only a few minutes' walk to the school building.

Modern Horse Breeding

It is the pride of every stallion or jack owner to be able to get a large per cent of mares in foal. There is nothing quite so humiliating in a business way as to have reports going over the country that a certain stallion or jack is not sure. Those breeders who are able to make a complete examination of a mare are in a position to get better results than those who are breeding in the dark.

The reason that the students at the Graham Scientific Breeding School accomplish so much, after only one short term of instruction, is that they not only are instructed, they are enthused. When the instructor dissects the first mare he explain certain conditions that have puzzled them. They learn at once, because they have an opportunity to see and understand just what he means. The average breeder without this instruction might dissect a mare and not be able to discover anything out of the ordinary, but when an expert shows the student the exact conditions to look for, he sees the way to overcome his difficulties and gets down to study with renewed energy. When the time comes for the student to take his turn in making the examinations under competent direction he sees things that he never knew existed before.

It is always interesting to see a class make the first examination (through the rectal wall) for diagnosing cystic ovaries, large kidneys, diseased uteri or other abnormal conditions. After he has been fully schooled in the position of these organs, they are then taken out and a lecture delivered that every student remembers through life. A diseased mare is usually selected for the first work. When the uterus is open and all have a good look at its contents nearly every breeder expresses the belief that he has bred many like it, but didn't know it.

The dissecting of mares, while it is very important, is only a small part of the work given at the school. The work during the entire week, which constitutes a term, is just as interesting as the dissecting, after the student comes to understand the great amount of information that is valuable and necessary on horse breeding. The school begins on Monday morning at 7:30 and continues every day and night till Saturday night at midnight. Think of it! From 7:30 in the morning till 10:30 at night, continuous every day for six days and nights. The students scarcely have time to get a shave, but they do get their money's worth, and that is what they come for. A reasonable amount of exercise is necessary. This is usually taken by the class in a body, in visiting various places of interest. Recreation and amusement are necessary in a case of this kind. The instruction is condensed, just the essential points of essential subjects are covered, and in plain language. Every lecture is illustrated. A lot of valuable lantern slides are used in making the illustration of these lectures the very best possible.

At the last term the twenty-sixth class was graduated from this school. This institution has long passed the experimental stage. Hundreds of successful breeders graduated from it have settled beyond any question of doubt the great value of this institution for horse breeders. Students from nearly every section of the United States have been in attendance. At the close of every term of school the return of the tuition has been tendered to any one who was not satisfied. Not a single individual has ever asked for his money, but hundreds of students have gone home and actually doubled their incomes the following season without increasing their investments while this information has a growing value for years to come. Practically every man that attends states that he had no idea of the value of the instruction offered or he would have been here sooner.

The next term will be held the first week in January, beginning January 5. This will be an excellent time for breeders to leave home. There are many who will contend that they cannot leave for one week because they have no one to look after their stock. It should not be difficult to employ some one to feed the stock for one week, by instructing him so he can measure the exact amount of feed for each animal and give it at a certain time each day. It will not be necessary that the stock be taken out of the barn for that period of time. This consideration should not stand in the way of any one who wishes to be an expert horse breeder. There are many who are busy the entire year and who never will attend the school if they wait until there is nothing to do at home. There is only one way to attend to this important matter and that is to arrange to be on hand at the next term. Arrangements can be made and we do not believe that any one will regret coming. Most of those who once attend find they can arrange to come back at least once a year. These graduates come to be looked upon as leaders in their communities and they want all the new information available. The breeder who can display a diploma from the only recognized breeding school in the world must have prestige over those who have not attended.

By paying close attention to the work the average student can graduate in one term. Those who doubt the value of this school can attend and if they are not satisfied in every respect, the tuition fee will be refunded without any questions. What breeder can afford not to investigate this kind of a proposition. There are some whose wives object to their visiting this institution; they do this through lack of knowledge. There is a lot of information that every man, as the head of a family, and for his own individual good, should be more familiar with. The lives of many people would be lengthened by this instruction. Those who attend this school are very clean men. Not a profane or vulgar word is heard during any entire term. No man can attend this school without being made a better man in every respect.

The tuition fee is $25, for life membership. Every student should arrange to reach Kansas City the day before the school opens so he may have a good night's sleep, and be rested.

Hundreds of testimonials have been printed in this paper from those who have attended, giving their names and addresses, so that any one interested could visit them or call them over the phone or correspond with them, provided a stamped envelope was enclosed for their reply. These men are under no obligations to answer correspondence, but we have no doubt they will gladly do so. Read the following testimonials from breeders who have attended the school in years gone by and in their business have since proven that the instruction has great value:

Nov. 13, 1913.—No one standing horses or jacks can afford not to attend the breeding school. Since attending the school in 1910, I have come in contact with a number of diseased mares that would not have been profitable to breed; some would have been dangerous on account of infection. I would not think of standing stock without the instructions given at the Graham Scientific Breeding School.—John T. Adams, Charleston, Ark.

Nov. 9, 1913.—While living at Farnsworth, Kans., I attended your school and practiced the scientific breeding as taught there and learned a lot of beneficial things. Since coming to Mississippi I find the knowledge gained there of even greater advantage, as there are a great number of mares here that are non-breeders, and mare owners are greatly in need of some one to tell them how to handle their mares. This is a fine country for breeding horses and mules.—F. S. Jennison, Elton, Miss.

Nov 11, 1913.—I attended the Graham Scientific Breeding School in 1910 and 1912. No horse owner can afford to stay away. What I learned in detecting and treating diseased mares was worth ten times the tuition fee. I have treated mares (old non-producing mares) and got fine colts. I have settled others the first time with the capsule. This makes satisfied customers and more of them each year.—E. P. Ferris, Haskins, Ohio.

Nov. 5, 1913.—In May, 1909, I got from the mail a paper known then as the Stallion & Jack News (now the American Breeder) and in that paper it said if I would send 25 cents the paper would be sent me for a year. I sent the 25 cents and have been taking the paper ever since. It treats on scientific breeding and no man is up-to-date as a breeder if he does not use it. There was a time when breeding was a business but now it is a profession. I have been in the business four years and I know that the school is a success, and if men would use judgment and have their mares examined, and bred by capsule, there would be more foals than can possibly be gotten by the natural service.—R. W. Davis, Wolbach, Nebr.

Nov. 11, 1913.—Your school has taught me how to save $50 a year on feed for each stallion; $30 a year on feed for each jack, or a total of $570 in three years. Your school has taught me to make an increase from 86 colts to 107 colts or $315 or more in money, or a total of $505 each year more than the old way; or, in plain figures, has made and saved me since attending your school, $1,135. I have my increase for 1913 yet to collect, which I will be safe in saying is 50 more colts. or $750, or a total of $1,887 in three years. This increase would make you horse men say the business is all right. That is what I say, but I have only learned part of it, but have a starter. Boys, if you want to stand stallions or jacks I would advise you to attend the Scientific Breeding School.—J. H. Martin, Meeker, Okla.

Nov. 5, 1913.—The value of the breeding school is a very important thing in a breeder's business. I could not estimate its value to me. My patrons have begun to keep their shy breeders at home, and think that the up-to-date breeder is by far the best. No man can afford to miss this school if he is in the stock raising business. Learning how to tell diseased mares is worth many times the price of a term. My patrons think it is a treat to listen to me go over the genital organs of the female, and show them the charts Mr. Graham gives his pupils. With best wishes to the Scientific Breeding School and its instructors.—J. A. Craft, Neola, Iowa.

Oct. 30, 1913.—I like the capsule method. Would not like to stand stallions with only the natural service. I got some mares in foal that would not settle with the natural service.—Thomas McDonald, Amorita, Okla.

Nov. 7, 1913.—I attended your school in the fall of 1910 and in February, 1911, and wish to say, as I am in the horse breeding business, that I learned more at this school than I thought could be learned in so short a time. I think every man that has a horse or jack should attend. You will learn that there are many mares brought to you for breeding which are not fit to be bred. I find that the barren mares in my locality are getting scarce. At first, the farmers made light of the scientific method but they are taking to it right along now.—James E. Ruth, Luray, Kans.

Nov. 6, 1913.—A man can learn a lot at the Scientific Breeding School, and every one that has a horse or jack ought to attend.—J. A. Wyneger, Ulysses, Nebr.

Nov. 8, 1913.—As to the Scientific Breeding School, I can't say too much in praise of it. Any one subject it teaches is well worth the price. Just to learn when mares are in breeding condition, for instance, saying nothing about the hundreds of other things it teaches. The capsule is surely a success. I am coming again; you learn something new every time. —J. E. Gibson, Morehead, Kans.

Nov. 3, 1913.—In 1908 I attended the Graham Scientific Breeding School and have attended one term since. I have had fair success. Have made some mistakes which I could now avoid. I am for advancement here and hereafter. — Charley Bull, De Queen, Ark.

Nov. 5, 1913.—I was among the first students and have been back since. The school is the best thing that a breeder can attend, as it saves him more money in one week in handling diseased mares alone, than the cost of school.—F. H. Miner, Hiattville, Kans.

Feb. 3, 1913.—I have attended the Graham Scientific Breeding School and I consider the time well spent. I think the knowledge gained there will be of inestimable value to me, not only in dollars and cents, but in the moral uplift. Every mare and stallion owner should attend at least one term. The lecture on diseases of the "Foal and Fetus" is alone worth the tuition. May the school continue.—F. M. Clevenger, Centerville, Ind.

Feb. 3, 1913.—I wish to say that the Scientific Breeding School is more help than can be imagined for breeding and stock raising also. I think the capsule system is the best way of breeding I know of, or ever heard of, after a man understands it, and the School is the place where he can be made to understand it. It is worth many times what it costs. —W. J. Helms, Ellis, Kans.

Feb. 5, 1913.—I have had better success in my first year of scientific breeding than I expected. I made some little mistakes which I will not make again after attending the second term. I bred enough good producing mares to convince the farmers that capsule breeding is a success. By cutting out the diseased mares and adopting the capsule system, I am able to stand our horses at a cheaper rate.—Wade Harvey, Harvey, Iowa.—Adv.

HORSEMAN AS A HOG RAISER.

To The American Breeder:—A few years ago I discovered that there was a considerable waste of grain around my barn in cleaning the grain and that which was refused was thrown away. I conceived the idea that there was enough feed wasted to feed several hogs, so I attended a sale of pure breed hogs and purchased a sow that was with pig. Brought her home and she raised me seven fine pigs. I took good care of these and during the spring breeding season when farmers came to breed their mares they noticed these pigs and I disposed of four boars in the fall at good prices. The boars more than paid for the purchase price of the sow and all other expenses. This left the old sow and three young sows.

Then I discovered that I was in the hog business and I made some pens and a good small hog house and arranged for a good hog pasture. I am in the hog business to stay and try to have a good bunch of pigs farrowed every spring so that I can show them to my customers who come to breed mares. I find this very profitable and would like to see other horsemen try this, as these men are in a good position to sell a number of boars every season. It is easy to get into the business. One or two bred sows is a good start; a little later on it will be necessary to buy a good boar.

Since the cholera has cut down hog production it would seem that the prices will remain high for a long time, though I do not advise getting into the hog business on a large scale. If the cholera should attack the herd the simultaneous treatment has given good results in this section, even after the hogs begin to die. I should like to hear from other breeders on this subject.—S. L. C., Iowa.

AN ASSOCIATION BULL SALE AT KANSAS CITY.

Secretary E. M. Hall of the Central Shorthorn Breeders' Association, has just sent out a letter to the breeders of this territory calling for entries for a March bull sale to be held under the management of this association. The move is in the right direction and should have the support of every man interested in Shorthorn cattle in the Kansas City territory. The letter makes plain the vital point that the cattle should be good individuals and in good condition.

The work of securing entries and organizing this sale will largely be done by Mr. Hall and the other officers at their own expense.

DEATH OF A FARM PAPER EDITOR.

E. B. Cowgill, for many years editor of the Kansas Farmer and president of the Kansas Farmer Company, died recently while on a visit to Kansas City. Mr. Cowgill had lately been connected with the Kansas University, doing journalistic work in connection with the university extension department. Over twenty years ago Mr. Cowgill was an instructor in the Kansas Agricultural College. This was prior to his buying an interest in the Kansas Farmer.

EQUIPPING A BREEDING PLANT RIGHT.

To the American Breeder: I "took the bull by the horns" and have purchased an imported Belgian that will mature at 2200, and a very heavily muscled, good bone, three-year-old; also a very "classy" 1800-pound, eight-year-old registered Percheron that will please any farmer who wants medium size, beauty and lots of action. I can go down the line some now with the "boys."—W. C. Moore, Labette County, Kos.

Live Stock Market Review

As is usually the case at this season of the year horse and mule demand is greatly curtailed owing to holidays and the closing up of finance for the year. Inquiry has to be stimulated by price concessions, in order to get activity in the market, and even then there is a very uncertain demand. This, however, is true only of about six weeks in the year and that time falls from the last week in November to the first week in January. This being the dull season of the year no one expects much demand and receipts are kept to small proportions. Very seldom a glut occurs on the market as dullness is followed by the January trade, the most active season of the year. In the past two weeks demand has been falling away slowly and is now about as dull as it will be any time in the next month. Prices came off in keeping with the let-up in demand. Some good drafters and chunks were quoted off $10 to $15 a head, but plainer grades which had declined in former weeks were steady. Mules are down $5 to $10 a head. There has been some buying in anticipation of a lively market in early January, and some demand for feeding mules.

The general uncertainty in demand makes this a poor season of the year to sell, though for those who buy and know what will be needed later, it is the best time for bargains. The weather has been especially adapted for getting both horses and mules in shape for sales early in the year. Animals can run in the open, they recuperate quickly and fatten well. At the same time the rough feed they pick up reduces the expense of dry feed materially. One North Missouri farmer said recently that he had a car load of good horses that were rounding into shape on nothing else than a blue grass pasture. He will dry feed them long enough before marketing to reduce their bellies.

Good mares will cut an important figure in the demand later. The few coming now are meeting a ready outlet, but after the first of the year a good many will be needed by the Northwest. So many Missouri Valley farmers have been breeding for mules in the past few years that good, all purpose mares have become scarce and many traders believe that a good brood mare next spring will be worth more than any other class of horses.

Market receipts for some time past have shown a large per cent of plugs, and ordinary workers. At this season all the useless old horses are being sold off, especially from the city. Hucksters, express, ice companies and the horses used in summer traffic operate on a small scale, and reduce their force to a small number. This is the selling time. Some good bargains in the cheap class can be had. The entire situation, however, will clear towards the first of the year and demand develop for the standard grades.

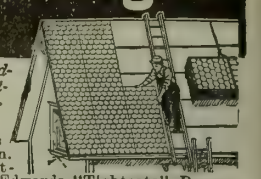
The following quotations are for serviceably sound horses and mules 4 to 7 years old:

Horses—	
Drafters, choice, 1600 lbs. up	$240@285
Drafters, fair to good	140@235
Chunks, fair to choice	125@160
Chunks, fair to good	80@125
Expressers and light draft	60@120
Plain workers	40@ 85
Southerners, good	125@145
Southerners, plain to fair	55@120
Plugs	20@ 45
Mules—	
13 to 14 hands	$ 85@130
14 to 15½ hands	110@160
15½ to 16 hands	150@200
16 to 16½ hands	185@275

Beef Market in Poor Condition.

The warmest November in more than twenty years, and the warmest part of it falling in the past two weeks was a factor in reducing demand for fat cattle. Killers claim that the beef market now is in a worse condition than at any preceding time in the past two years. It will take a period of nursing to rejuvinate demand. Poultry to a large extent has been the stumbling block for beef, but with the Thanksgiving holiday over poultry will be in less favor from now on. Through the period of slack demand packers have operated on a hand to mouth basis and when demand for beef begins to improve it will show quickly in the cattle market. In the past two weeks prices have declined 15 to 25 cents and now are at the lowest level of the year. Few prime beeves are coming, especially at river markets. Chicago is receiving more fat steers than the combined supply at other markets and there fed grades are selling at $7.75 to $9, some in the yearling class with prime finish as high as $9.25. The general run from Eastern feed lots is quoted at $8 to $8.50. Such steers a month ago were bringing $8.50 to $9. In previous years such periods of dullness as the market is passing through now has been followed by a sharp rise in prices. A good many feeders have be-

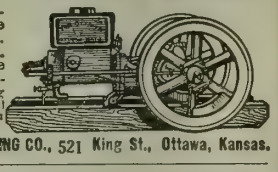
More Informaton On the Relative Merits of Silage and Other Cattle Growing Rations



To the American Breeder: The calves you saw here at the close of the wintering experiment last spring have been weighed after 162 days on grass. The following data, giving their winter rations and gains, together with their summer gains, may be of interest to you:

	Lot I.	Lot II.	Lot III.	Lot IV.	Lot.V.
No. of calves in lot	10	10	10	10	10
Winter rations for 100 days.	Corn silage Cotton seed meal.	Kafir silage Cotton seed meal.	Sweet sorghum silage Cotton seed meal.	Corn silage Alfalfa hay.	Corn stover shelled corn Alfalfa hay.
Winter gain (100 days)	1528	1627	1584	1500	1624
Average daily gain	1.528	1.627	1.582	1.500	1.624
Summer gain (162 days)	875	699	605	867	957
Average daily gain	.540	.431	.373	.535	.590
Total gain (262 days)	2403	2326	2189	2367	2581
Average daily gain (262 days)	.917	.887	.835	.903	.985
Cost per 100-lb gain during the 262 days	$4.788	$4.942	$5.251	$4.962	$4.632
Necessary selling price to come out even	$6.70	$6.77	$6.94	$6.79	$6.62

You perhaps realize that the small summer gains shown above were due to the extreme drouth which prevailed here last summer. While these calves suffered from a shortage of grass, they had plenty of water and did not shrink on that account as did many cattle in Kansas this summer. These calves showed better condition early in September than they did at the time of weighing, October 11. Their pasture was valued at $6 per head.



We have for this winter's work 100 head of high-grade Hereford heifer calves, to be used in experiments for determining more economical methods of wintering beef cattle. At the close of the experiments we hope to have you with us again. Notices of such meetings will be sent to cattle feeders of the state and to those out of the state who were with us last spring.—C. M. Vestal, Kansas Agricultural College

Special Prices on Edwards STEEL Shingles!

Send now for *Edwards 1914 Direct-from-Factory Offer.* Amazing prices. Freight paid. Edwards *Steel* Shingles never rot or burn. Made forever rust-proof by famous Edwards "Tightcote" Process. Easier put on than common shingles. No extras, no tools. No expert workmen. No paint required. Far outlast wood shingles. Over 125,000 satisfied users. Write. Get prices and Free Book No. 1276. Send dimensions of roof if possible. (133)

Stretches wire, pulls posts, hoists, etc. Write for the facts on this fast money-maker. HARRAH MANUFACTURING CO., Drawer O, BLOOMFIELD, IND.

come discouraged by the continued weakness in prices and are marketing rather than be at the further expense of feeding. As far as the season has gone, this year will be one of the most unsatisfactory to feeders in several years past, though in early September it gave promise of showing good returns. Feeding cattle were put in at the highest prices on record, and feed has been correspondingly high. The market for fat cattle for a month past has been unsatisfactory. The Southwest is still shipping some cattle, and Kansas and Colorado are still counted as supply territory. The first three months in the year, however, will show bare spots. Kansas at that time contributes beef freely, but this year she will have nothing but rough feed and cotton seed to feed. In most cases cattle will be carried through until spring pasture. The run from below the quarantine is light. Steers are selling at $5.50 to $8, few above $7 and most of them have had considerable feed.

Quotations for the various grades of killing steers are as follows:

Prime corn fat steers	$8.50@8.75
Good to choice steers	7.75@8.75
Fair to good steers	6.65@7.70
Common to fair steers	5.75@6.60
Meal fed, choice	7.50@8.00
Meal fed, common to fair	6.50@7.45

Butcher Cattle Higher.

The continued weakness in the steer trade is offset by rather extraordinary activity in butcher cattle. Heifers, cows and bulls are not in supply equal to demand and killers since the supply is short seem to prefer female stock to steers. Hardly any full fed heifers have been offered in two weeks past. Several bunches of Southwest grass fat heifers sold at $7.25 to $7.75. A good many cows and heifers have been turned on wheat fields and on that account the January supply at markets may be larger than usual. Killers are still buying all the "canner" cows available and paying $4 and better. Bulls are selling at $4.50 to $6.25, mostly $4.85 to $5.50. Veal calves are quoted at $6 to $10. Receipts have been small and will continue so for the next three months.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice	$6.25@ 7.25
Fair to good	5.50@ 6.20
Common to good	4.75@ 5.45
Canners	4.00@ 4.65
Heifers—	
Choice fed	8.00@ 9.00
Good to choice	7.00@ 8.00
Common	5.00@ 6.00
Plain to fair	6.00@ 7.00
Veal calves	6.00@10.00
Bulls	4.50@ 6.50

Small Receipts of Feeders.

In the past two weeks fewer stockers and feeders were offered than for some time past. The decline in prices in the first two weeks in November checked the movement. The supply available now is ordinary in quality, being the clean up of the big pastures or the second cut out of herds that had to be reduced. Few heavy feeders are wanted, but the lighter weight cattle that can be carried through the winter and placed on grass early next spring are in active demand. Stock calves, cows and heifers are still scarce. Prices are 25 to 35 cents higher than two weeks ago.

The following quotations are for stock and feeding cattle:

Selected feeders	$ 7.25@ 7.65
Good to choice feeders	6.75@ 7.20
Plain to fair feeders	6.25@ 6.70
Selected stockers	7.00@ 7.50
Good to choice stockers	6.25@ 7.00
Plain to fair stockers	5.75@ 6.20
Stock calves	6.00@ 8.25
Stock cows	4.50@ 5.75
Stock heifers	4.75@ 6.50
Milch cows	50.00@110.00

Deficient Weight in Hogs.

Receipts of hogs have been liberal but weight is 20 to 30 pounds below normal. This means a material reduction in pork product, and some bare spots in the supply later. In Kansas City in November the average weight of hogs was 178 pounds, seven pounds less than in October, and 28 pounds less than in November, 1912. Other markets have shown a corresponding decrease in weight, and December shows even a bigger shrink in weight compared with a year ago than November. The lack of corn and the early marketing of hogs are the causes of the deficient weight. Prices have fluctuated more or less unevenly, but in the past two days turned down, and yesterday were 15 to 20 cents lower than two weeks ago. No 8-cent quotations have appeared at any market in the past ten days, and it is quite probable that packers will keep the market on the present basis until the movement lightens. Provisions are holding up well, and the bull side of the market seems confident that the shortage in weight will force May pork above $24.00. Less complaint is heard concerning cholera, and the general health of hogs now is better than a month ago. Chicago is the center of the heaviest movement, Michigan, Wisconsin and Minnesota contributing freely. Owing to losses from cholera Iowa has comparatively few hogs on feed, and the Illinois supply has been reduced by the recent marketing. In the West, Kansas has marketed more hogs than any other state, and that movement was forced owing to the scarcity of corn.

The following quotations are for hogs:

Choice, 250@300 lbs.	$7.45@7.65
Choice, 200@245 lbs.	7.35@7.62½
Medium weight	7.25@7.55
Light weight	7.10@7.45
Common to fair	6.00@7.00
Stags	5.75@7.50
Boars	4.25@6.25
Bulk of sales	7.30@7.60

The following table shows prices for hogs in Kansas City in the past two weeks:

		Preceding Week.
Mon., Dec. 1.	$7.30@7.77½	$7.45@7.85
Tuesday	7.25@7.72½	7.30@7.75
Wednesday	7.25@7.70	7.25@7.65
Thursday	7.15@7.57½	Holiday
Friday	7.20@7.65	7.50@7.92½
Saturday	7.10@7.50	7.45@7.90

Sheep Prices Stronger.

Demand for sheep has improved in the past week and prices now are 25 to 40 cents higher than two weeks ago. Quotations are close to the 8-cent level, and within a few days will probably pass that mark. The greatest advance has been in light weight yearlings, the kind killers can make dressed at lamb weight. Such are called breakers, and on the mutton market bring as much as lambs. Receipts have been fairly liberal, the movement being largely from the corn belt, and in quality grass fat. Some few short fed sheep are coming and that movement will increase as the season advances. Choice fat lambs are quoted at $7.50 to $8, yearlings $5.50 to $6.75; ewes $4.40 to $4.85, and wethers $4.65 to $5.35.

HEAVY MILKING SHORTHORN COWS.

To the American Breeder: One of the best cows I ever owned was old Roan. She first saw daylight down in a ravine amid the tall blue stem grass on Blue Ridge prairie; a little wabbly-legged, strawberry roan, and as she trotted along side of her mother (a grand Shorthorn bred in Kentucky). I considered her a rather poor specimen of the breed. However, as usual, I gave her a good chance, and how she did grow; always gentle and kind. At two years old she, too, stole off in the ravine and found a little one of her own. Whilst she was very careful with the little fellow she was kind to the children who would take their cups and one on each side would press out the snowy streams until their cups were heaped up with the foamy liquid. Every year she made her regular trips to the ravine, and what grand calves she would raise. Being a 1,500 pound cow herself, her calves grew to enormous size.

At eight years old she gave nine gallons of milk a day for three months, on blue grass pasture with-

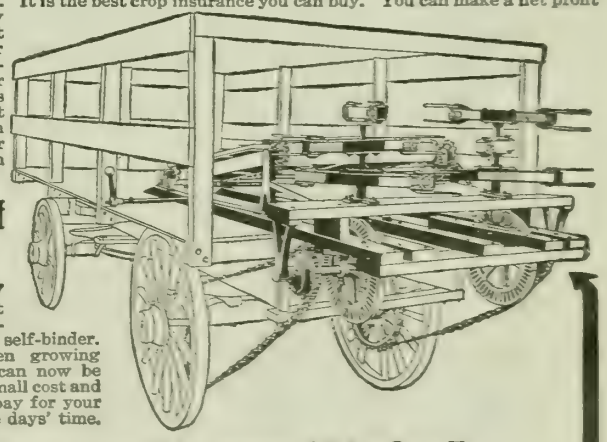
RELY ON LYON

Don't Burn Your Straw



It is Worth $2.50 a Ton

You can't afford to go on from year to year letting your land run down, raising smaller crops—or to ***lose your crops by soil blowing.*** You can't afford to ***burn*** straw stacks. Agricultural experts have proved beyond any question of doubt that straw contains fertilizer value worth $2.50 a ton, besides furnishing humus to the soil that ***prevents soil blowing*** and ***insures crops*** in dry season by ***retaining moisture*** and protecting the young crop. Straw spreading solves the wheat growing problem. The

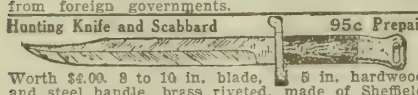
"Simplex" Straw Spreader

solves the straw spreading problem. No longer is it necessary to do this tiresome work by hand. The "SIMPLEX" does the work—does it easily and in exactly the right way and at the lowest cost. It is the best crop insurance you can buy. You can make a net profit of $2.50 a ton on your straw because you can spread it at odd times and the spreader will last for years. Scatters straw wet or dry, or old rotten stack bottoms over a space 12 to 20 feet wide. Man and boy can easily spread 30 acres or more a day, depending on distance to haul.

Pays for Itself in 3 Days

The "Simplex" Straw Spreader is the greatest advance in farm machinery since the days of the self-binder. Farms which have been growing wheat year after year can now be spread with fertilizer at small cost and the worth of straw will pay for your machine in less than three days' time.

30 Days Free Trial



If you have straw on your farm I have a proposition you ought to know about. In order to thoroughly introduce the "SIMPLEX" SPREADER in every county this season, I will send a spreader on 30 days' free trail, to ten men in every county—no money down—no note—no deposit or check—just common honesty among men. I take all the risk and ***all that I ask is that you give the Spreader a fair trial.*** Write me today so that I can send you a full description of the "Simplex" Spreader, how it works, how it is made, how to use it, and my offer to use it 30 days absolutely free. If you don't find it satisfactory in every way and the most valuable implement on your farm, all you will be out is a trip to the depot and a shipping tag. If you are not thoroughly satisfied—I will pay the freight both ways. I have shipped hundreds to the wheat fields of Kansas and Nebraska on this proposition, and unless their owners could duplicate them you couldn't buy them away for twice their cost. Write me at once if you want a Simplex Spreader on free trial. Illustrated circular and important information free. **L. D. RICE, Manager.**

Alfalfa Tiller That renovates, mulches, stimulates, without injury to plant. Catalog Free. **Light Draft Harrow Co., Marshalltawn, Ia.**

out other feed. After one of her trips to the ravine she came home with a wild look in her eyes and a staggering gait, and in a short time was down and unable to rise. We took the best care of her we knew how, but the grand old cow passed away. Had we then been taking the American Breeder we would have known she had milk fever, and also the remedy.

Another grand cow was Nellie Grey, bred by Jos. Combs and tracing to Imp. Young Mary. She always gave milk enough for two calves, and was sold for beef at 15 years old, weighing 1,600 pounds.

Daisy brought twins as a two-year-old. She gave more milk than they could take until they were three months old.

Belle of Blue Ridge and Minnie's Jewell give six gallons of milk a day.

In the 40 years that I have kept Shorthorn cows only one failed to give more milk than a young calf could take, and she had a spoiled udder.—W. H. Richter, Harrison County, Mo.

PORK CURING RECIPE WAS A GOOD ONE.

To the American Breeder: About one year ago, possibly longer, you published in your paper a very good recipe for curing pork, given to the Rock Island Railroad Agriculture Department. We used it last year and thought it fine, but have lost it and can not find it at all, and are very anxious to use same again, so are writing you to see if you would send it to me, and if there are any charges I will gladly pay them. I appreciate your paper more than I can tell, and I think perhaps that is the way I lost the one that had the receipt in, by giving the paper to some one to read. I am not in the stallion business now but eagerly read all in your paper, and I think the Graham Breeding School one of the grandest things ever started. Hoping to hear from you at your earliest convenience, I am, your friend, as. C. Stevenson, Hardin county, Ohio.

Here is the recipe for which Mr. Stevenson asks:

A day should be selected for killing when the temperature is low enough to insure a thorough cooling by the following morning, the hogs being dressed and hung over night.

On the morning of the day the hogs are killed, for each 400 pounds of meat make a brine as follows: Twenty gallons of rain water, 30 pounds of salt, 8 ounces of baking soda, 10 pounds of brown sugar, 1 gallon of molasses (use good molasses, not the adulterated kind). This fluid should be boiled and skimmed in the morning and left to cool in a shady place. When cool, add five ounces of saltpeter. Dissolve the saltpeter in warm water and stir into the other mixture thoroughly.

The following morning cut up the hogs as usual, and pack in barrels. Put the sides of the meat or middlings in the bottom and the shoulders next, and the hams on top of these, all with the skin side down. Weight the meat down well, and pour the brine over until the meat is completely covered. Then cover the top of the barrel with some good thick covering that will prevent evaporation.

Look at the meat often enough to see that the brine has not evaporated so as to leave any meat exposed. If it should become exposed more brine should be added. The meat can be left in the brine indefinitely, but if it is desired to smoke the meat it should be taken out in six weeks.

Ben M. Green of Cape Girardeau, Mo., is advertising 12 head of jacks for sale, 2 to 5 years old, that he will price right, as he needs the room. Look up the ad.

G. A. Tallmade, Madison, S. D., has three Shire stallions for sale. Write him if you are interested.

Horse Breeders Use the Microscope

Breeders have an authentic way of knowing whether the stallion or jack is doing his part in discharging live spermatozoa. This is the only quick way of knowing whether the sire is fertile or not.

Any average breeder can use a microscope. There is nothing technical about it. Any one can be taught in just a few minutes. When live spermatozoa are deposited into the uterus of a mare, that is all any stallion or jack can do. If the mare fails to produce no charge can be brought against the sire. There are many breeders using their stock too frequently, with the result that live spermatozoa are not always discharged.

The microscope method of testing stallions is of recent introduction, but it is being used quite extensively now. Every breeder that owns a good stallion or jack should use a microscope. We have tried to encourage this method of testing all sires. We take some pride in having introduced this improvement in horse breeding. Recently letters were sent to a number of men who use the microscope, asking them to give in their own language, their opinion of its value in horse breeding. Their letters follow:

I consider the microscope one of the most essential instruments in the breeding business. Mine is not for sale and if I had to give it up I would go out of the breeding business. It is the only way to convince the mare owner that your horse or jack is all right after he has bred the mare two or three times. It is a good thing in the way of an advertisement. I have lots of scientific men, doctors and veterinarians that come quite a distance and spend considerable time and they all go away satisfied and say they have learned something. Last fall I spent a week or so among the big breeders of Oklahoma and Kansas, and at every place I found a microscope I found a man that had lots of confidence in his next year's crop of colts. Brother Breeders, use a microscope by all means.—W. F. Dimick, Kiel, Okla.

I have attended the fourth term of the Graham Scientific Breeding School, and always feel well paid for my time. I purchased a microscope the first term and will say it will do more advertising for a man than ten of the best boosters in any community. You always know whether you have gotten a fertile service from your animal or not, and I have never had a man to go to his neighbor and say "Mouse's stock is not sure," after looking into the microscope and seeing the germs wiggle. Another good advertising scheme is to send a few copies of the American Breeder to your customers, and to those who have not been your customers. I intend to send several hundred copies next spring. I know it pays by experience. Also mail a lot of bills to your customers. First to be successful in the breeding business one must be up to date in scientific breeding, and have pure bred stock. If you attend the Graham Scientific Breeding School you become enthusiastic and put your community on the "horse map." I bred 150 mares to my three-year-old horse this season and believe I will double the number next year. I would point all breeders to the Graham Scientific Breeding School, which is the only way to financial success in the breeding business.—S. S. Mouse, La Cygne, Kans.

I used the microscope last year with my horses and jacks. I wouldn't take $200 for it if I couldn't get another. When you test your horse and he shows lots of active spermatozoa, you and your customers both know that if the mare doesn't get in foal it isn't the horse's fault. Some of the old hard-headedest fellows in this country against the capsule system, just as soon as they looked in the microscope decided to breed with capsules. If more of the breeders would get a microscope and let it be their guide, there would be fewer services and more colts. My customers say it beats anything they ever looked at. —John Wilson, Wolf Creek, Ill.

It is quite easy to convince any one whether the stallion is sure or not when one uses a microscope. I think every stallion and jack owner should have one. I wouldn't take many times what it cost me if I could not get another.—Wm. Cameron, Wilmot, So. Dak.

I want to say a word of praise for the microscope in the breeding barn. One always knows just what he is doing, and by having one at my barn I never had a single man object to the artificial method of breeding. If I could not have one I would quit the business. It is a great advertiser. Breeders, buy one and be convinced. —C. O. Williams, Kempton, Ind.

I think the microscope is a necessity in an up-to-date breeding barn, and I think in time it will be required by the mare owners, especially after they have learned the advantages of its uses. I test every service during the season and good thinking mare owners can readily see the importance of such tests. I have the Percheron stallion, Inclus, grand champion American Royal 1911 (there is no better in the state) so, of course, when I happened, for some unknown reason, to get a bad service one day last season, and sent seven or eight mares away without service, it was quickly spread from other stables that Inclus had been taken off the stand. It only served as an advertisement and gave me a splendid opportunity to explain the advantage of using the microscope. In the first place it gives a man a chance to study the condition of his stallion or jack —that is, just how the semen should look to get best results—then try to keep them in the best condition. I find that lack of exercise, over-work or any radical change in the care of a stallion or jack can easily be detected through the microscope. Then it helps remove some "fogy" ideas and educate the mare owners, and we all know that education in the breeding business has been sadly neglected. And last, but not least, if a stallion makes a bad service, which any stallion may do sometimes during the season, seven or eight mare owners might be glad to breed next day, rather than wait three weeks, not knowing the stallion had failed to do his part.—Bruce Saunders, Holton, Kans.

I have had great success with the microscope in convincing my men as to whether or not my horses and jacks were sure. I test each one every week during the breeding season, and if you were there when I make the test and see the crowd I have, and hear the remarks as they look at the live spermatozoa, you would think I would not sell it at any price.—E. H. Lear, Mound Valley, Kans.

The microscope in the breeding business is an absolute necessity. No man can tell what he is doing unless he has one. I was talking to a stallion man last June and I told him

PERCHERON STALLIONS.
I have for sale or trade two good young registered stallions, coming 2 and 3 years old. They are out of one of my best mares—Queen Ann 44[illegible], and will make ton horses.
J. P. ANDERSON.
Agenda, Republic County, Kansas

the microscope was a very satisfactory instrument; it tells you just what you are doing. He said he could tell whether he was settling them all right without any microscope. Money would not buy this one if I could not get another. There is too much horse breeding going on in the darkness now.—E. E. Hall, Kincaid, Kans.

I have had good success with the microscope. It is a big help in the breeding business, not only for myself but it shows the mare owners that it is the mares' fault when they do not get in foal. They have a right to know that the stallion or jack they breed to is fertile, the same as a stallion or jack owner has a right to turn down mares that will not breed. I would not do without one at all. —W. P. Hodgden, Enid, Okla.

I did not get fixed to use my microscope as I wanted to, but I would not do without one if I kept stallions and intended to follow horse breeding. The customer can see whether it is the horse's or mare's fault that they do not get in foal.—F. M. Clevenger, Centerville, Ind.

I find the microscope the most convincing proof of the fertility of the stallion or jack. No reasonable man will doubt this after seeing for himself. It will cause the mare owner to think there is something wrong with his mare when all other arguments fail. It is the cheapest and most efficient means of advertising. I would not take any price for my instrument if I could not get another. —R. J. McAdams, Lisbon, La.

Using a microscope is the cheapest and best advertising I have ever done. Mare owners see for themselves that the existing trouble is invariably with their mares. Using the microscope has more than doubled my business. —T. R. Young, Richland, Iowa.

I have used the microscope during the season of 1913 in horse breeding, and will never try to get along without it. It shows the mare owners just what your horse is, and that you are not misrepresenting things. I keep a bottle of semen and show the old semen first and then let them look at good semen with live spermatozoa. It beats any kind of an ad if you have a sure horse.—Frank Conway, Casey, Iowa.

Using a microscope in horse breeding is much the same as eyesight in working—you can see what you are doing. A stallioner or mare owner, after seeing through a microscope, good live spermatozoa in a horse's semen, must know the semen is right. No need to wait three weeks to know about the stallion's part. Should he be wrong, attention can be given at once. If right, and the mare returns, the mare owner knows he must look after the mare—that the stallion showed sure. Even though your stallion may have proven sure in the past, and you can show a high per cent of mares settled, old customers, as well as new, appreciate it when you can show through the microscope good live spermatozoa in the semen right then when needed. I would not take the price of a good horse for my microscope and continue in the breeding business, if I knew another microscope could not be had.—F. D. Fruin, Gilman, Ill.

The microscope serves me well for two purposes; first, I can know the condition of my horse and jack; second, I am able to convince the mare owners that the trouble with the shy breeding mares is largely due to the condition or treatment of the mare. Being thus convinced we are the better able to get at and correct the trouble. It puts an element of certainty into the breeding business. It is a great help in introducing capsule breeding. If I could not get another I would not know how to price the one I have.—A. Lee Ely, Monroe City, Mo.

I have not used my microscope along the line you suggested, but will say I would not take three times the cost of mine if I could not get another.—John F. Wood, Alma, Ark.

I am very glad that I bought a microscope. It is the best advertising of horses I know. With it I was able to convince all the mare owners that the horses are sure foal getters. I have learned many valuable things from it that I cannot get any other way. This microscope did me more good than one extra stallion would. I would not sell it for any price if I could not get another one. —Joe Kejr, Dorrance, Kans.

Money would not buy my microscope if I could not get another. I would just as soon think of what times were years ago as to do without it, and the other instruments used in the breeding business. It's the largest drawing card for a beginner, as the farmers want to see the spermatozoa every time they come. I would not do without it, too, for I can't tell when the mare is going to fail.—Wade E. Harvey, Harvey, Iowa.

I have used the microscope in my breeding operations for two years with good success. Last season I made three stands with my horse and carried the microscope along to show the mare owners that my horse was in A 1 breeding condition. I guarantee him in that condition. I think every stallion owner ought to have one.—P. Gemmell, Henderson, Ky.

By the use of the microscope I have changed a disappointed customer to a satisfied customer in a few minutes, by testing the semen. In several cases the service was questioned, and by placing hand on the floor of vagina and testing with a microscope, proven conditions positively. I would not be without one and stay in the business.—J. C. Boyles, O'Keene, Okla.

There is nothing like the use of a microscope in horse breeding. With it you can find your stallion's capacity and breed accordingly. Before I got my microscope I ruined one horse, and without doing an extra large season either; it was just a matter of a short time. The man that breeds a horse without a microscope is very careless, indeed. He may be able to breed more mares than he is breeding, or possibly not so many. However, it stands him in hands to know. Besides it brings him a great many more customers of the right kind. Should I not be able to get another microscope I would no sooner take $500 for my glass than I would five cents.—G. F. Lucore, Arriba, Colo.

I would not be without a microscope. It will convince the public that your horse is all right when nothing else will, and they will come to your barn and see for themselves. I could not get along without one. When they see the germs they are convinced.—W. W. Weston, Audobon, Iowa.

My artificial breeding last spring and summer was a great success. The microscope is a great advertiser. It will head off the knockers and give the boosters confidence. I do not see how a man with a stallion or jack, that is on the square, could get along without one. The mare owner knows when he sees the live spermatozoa that the stallion or jack has done his work well.—C. L. Clayton, Wakefield, Kans.

The microscope has done me more good this year than I could by talking and advertising in five years. After the mare owners have seen the live spermatozoa they are convinced that my stallions and jacks are all right. One man in particualr would not let me use the capsules until after I had taken him to my office and showed him my charts, etc., and let him see the live spermatozoa. I capsuled both his mares and he paid me $15 cash, just the same as it would be for two single leaps. Both his mares are with foal at this time. I have mares coming 40 miles to be bred with capsules next year. Money could not buy my microscope if I could not get another one.—Frank N. Taylor, Meridian, Idaho.

I think the microscope is the best thing for advertising that I know of, and it surely convinces the mare owners that the jack or horse is sure. As

TAYLOR & JONES

WILLIAMSVILLE, SANGAMON COUNTY, ILLINOIS,

have for sale the **best** Imported and American-bred Percheron, Belgian and Shire Stallions at the **lowest prices** and with the **safest guarantee** of any firm in the business. Determine these facts by inspecton.

RESIDENCE AND BARNS IN TOWN.

Taylor & Jones, Box 160, Williamville, Sangamon County, Ill.

R. I. Little, Route 2, Fairfax, Iowa.

LA FAYETTE STOCK FARM

Largest Importers in America of Percheron and Belgian Stallions and Mares. Over 200 head on hand. When your locality has a horse from this great farm every one knows he is the right kind. Write us or come and see us.

We are also breeders of pure bred Hampshire Swine.

J. Crouch & Son, Props. La Fayette, Indiana

to what I would take for it if I could not get another, I would not think of pricing it at all; I would not part with it.—S. L. De Witt, Blue Springs, Mo.

After the mares are all served, a colt show under the microscope convinces the mare owners that the stallion is all right and that he is on to his job. Then if the mares don't get in foal they blame it on the mares. I think a breeding outfit is not complete without a microscope. I would hardly know what value to place on mine if I could not get another.—J. G. Arbuthnot, Cuba, Kans.

I consider the microscope as invaluable to me. I am able to convince mare owners by its use that my stallion and jack are sure, proving same by a microscopical examination of the spermatozoa, and showing that it is fertile. I would, under no consideration, part with the microscope so long as I expected to follow this line of work.—J. A. Swearingen, Breckenridge, Okla.

DIAGNOSING HORSE DISEASES.

To The American Breeder:—As a graduate veterinarian I would like to see the American Breeder take up a series of articles giving the symptoms and a few of the important diseases commonly found in horses. A lot of good horses are killed every year because their owners do not understand their ailment. There may be some who would not like to have these articles printed in plain language so that breeders could understand them, but I believe that nearly every qualified veterinarian would be heartily in sympathy with such a movement.

In addition to the great loss of animals from the wrong treatment there are also an even larger number for which a veterinarian is not called in time to be of any service. The more the owners of this stock understand these conditions, the sooner they will want prompt relief in order to save their stock. After an animal has passed a certain stage in most of the diseases or ailments, veterinary science is helpless. No veterinarian enjoys being called to a case too late. Every man who has his reputation at stake wants a fair chance.

There are also a lot of simple remedies that could be used to a good advantage by the owners of stock, and more especially the emergency remedies. If veterinarians had a better chance to visit an animal before it was too late, this profession would be more in demand. Every stock owner should be able to take the temperature and pulse and give a good description of the case over the telephone. This would greatly assist in preparing the necessary materials for a particular animal. In many cases a veterinarian is called without any knowledge of the case. He is not always prepared for that particular case. Nothing adds to a veterinar-

W. H. DAVIS, West Elkton, Ohio.

ian's reputation as much as being successful. This success in most cases depends on being called early and having a good description of the case to start with. Many times if the owner of an animal had enough knowledge to give a reasonable diagnosis he could be instructed to give emergency treatment which would save a lot of time and the veterinarian would have a better opportunity. I believe a vast majority of the veterinarians would be glad to co-operate with owners of live stock in a better knowledge of diagnosis.—P. L. C. Illinois.

A TEXAS NEED.

To the American Breeder: Here in my neighborhood I am the only one that has a registered Percheron stallion. Terms are $15 to insure mare in foal. There are mares bred to him and then traded to Tom, Dick and Harry, and by the time fees are due they have changed hands so many times it is hard to collect under our Texas laws. We want a better law in our state and want you to help us to get it. Have the mare and colt bound for 12 months and money due when property changes hands.—W. A. Winningham, Fannin County, Texas.

HOW TO HANDLE A STALLION.

To the American Breeder: I am 68 years of age and have made 42 seasons with stallions and jacks and have had a wonderful experience with most all kinds of breeds of horses. A stallion, as a rule, should be handled very kindly, but very firm, and keep your eye on him with a tight rein. When you take him out to try a mare, go slow to about ten feet of the mare; then let him stop for a minute; then let him advance to the neck of the mare, then work back to the flank and no farther. Keep a tight rein on him. If your horse gets very keen when trying, lead him away from the mare until he is quiet; then return and as soon as he is ready let him serve her. If he is a heavy horse, let him come up behind the mare, rather than side, to leap. Hold a tight rein and let him stop just before he gets to the mare. A bit that will hold him is the means of having him come slow and go on easy.

I think draft stallions are better worked on farm than to stand in stall. Let them run loose. Don't keep breeding stock tied up. Let them have a good lot with a bar stall to shut them in when weather is bad. Don't let them stand in drafts of wind. Don't let other stock be around the lot to fret the stallions. Put some cottonwood poles that the bark is tender for him to peel. Sucking asp poles are good, or willow poles and brush; they like to eat this.

To take care of a breeding stallion he must be turned loose when not at service and not fed too heavy on grain; give him plenty of pure roughness and this will keep him from getting too fat. Keep him out of cold rains and storms. When he is being kept for breeding purposes feed him a variety of feed, both roughness and grain. Keep his bowels regulated with wheat bran. If he is constipated, give him three quarts of very wet wheat bran with a tablespoonful of salt and a teaspoonful of baking soda at night. If he is loose give him a feed of dry bran.

Salt just after the horses and jacks have had their suppers and just before the keeper says time to go to bed. This may be done three times a week and you won't have much trouble with bots and worms.

When breeding mares don't have any whips, or battle with the stallion, as results are not so good. Breeding should be done very quietly.

When to whip a stallion when he bites or kicks you: How many licks? Three. What with? A broad strap, and strike fast. Don't swear; scare him as badly as you can with the three licks, as any more may cause him to bite back, and you will have a bad disposition to contend with.—G. W. Knotts, Payne County, Okla.

CARE THAT MAKES A HEALTHY, GENTLE STALLION.

To the American Breeder: This is the way I take care of my imported Percheron stallion: At the beginning of the season I try to have him in fair condition, and gradually keep him gaining until the end. My feed consists of corn chops, bran and good timothy hay, with a little clover. I do not let a day pass but what I let him eat grass for two or three hours, also five to ten miles of road work. The grain ration is not to my liking, but it is as good as I could get. Oats have been a failure in this country for two years.

About the last of July, I turn him in the pasture with my three brood mares. He has no trouble with them, only a few kicking spells at first; he soon learns to let them alone. This is getting close to nature, and can you improve on nature in this respect? That is for the health of the horse, and this is the first consideration always. Isn't it far better for the health of the horse to have the run of a large pasture, with plenty of grass, where he can take all the exercise he wants, and whenever he wants it, than to be shut up in a stall with a limited amount of exercise, or even be in the harness a part of the time? Can a man expect success with a horse if he only looks after his health three months of the year, and neglects it the other nine? I say not. It takes 12 months care in the year to make and keep a horse a successful breeder.

Of course all horses cannot be handled in this manner, but more of them could if only given a chance. That is, in regard to being turned loose in the pasture. Too many men are simply afraid to take any chances, when there is very little danger attached to it.

The man I bought this horse of cautioned me very particularly about ever letting this horse get loose, as he was so mean to fight. Six months from the time he came into my possession, he was running in the pasture with my mares and was no more trouble than a gelding. But I have to be careful about letting any geldings in the pasture with him.

At present his feed is three quarts of corn chop, once a day with what grass he eats. He is in good enough condition to put on exhibition. I won the blue ribbon at our fair in October, four counties allowed to exhibit. As to his breeding qualities, I wouldn't give a penny for a surer one.—H. B. Smith, Douglas County, Mo.

INFLUENCE OF A GOOD SIRE WELL HANDLED.

To the American Breeder: I have a bright bay Belgian stallion weighing 1800 pounds, Maximus the III, who has proven himself a fine breeder. His colts talk for themselves. One of his largest colts at six months weighed 800 pounds. Some people have been unable to get their mares with foal with other stallions, but when they bring them here I have no trouble whatever, as he is a sure breeder. I positively will not breed diseased mares, and after I talk to my customers as to why it is best not to, they seem perfectly satisfied.

Everyone in this vicinity is very much interested in colt raising. To get them more so, I am planning a colt show next fall and the one that brings the best colt will get a good cash prize. I think by doing this and getting the people more enthusiastic it will help to better the colt question. There are quite a few scrub mares around here. I have been a

Winning Percheron Stallions

I have some good colts I want to sell. They won at the Nebraska State and County Fairs, are strong in the Brilliant blood; splendid, strong boned horses; all bred and raised by me. Here is the breeding of two of my good colts:

Tony 93906—Foaled July 5, 1911; sired by Taiton 27153 (44790); dam, Fancy 46863.

Count 78720—Foaled May 21, 1911; sired by Taiton 27153 (44790); dam, Flossie 21220.

Come and see them or write for further description.

H. C. STRYKER,
RISING CITY, NEBRASKA.

Percherons

For Sale—Black-gray stallion; 3 years old; 1,800 pounds. Black stallion; 2 years old; 1,700 pounds. Lots of bone and quality. Will make over 2,000 pound horses. The 2-year-old's mother weighed 2,150 pounds. Also black, 6-year-old imported mare in foal; weight 1,850 pounds; sound and a good worker.
L. P. YOCUM, Clarence, Iowa.

PERCHERONS.

Buy them from the farmer and breeder. Young stallions and mares for sale. Mares bred to the interstate champion, Fortress, and imported Kergolay. Both noted sires and prize winners.
C. G. Anderson, R. 5, Hector, Minn.

Imported Percheron Stallion

For Sale—Black; 12 years old. I have used him four years. Colts to show. Price $450. I will trade for registered fillies or mare.
FRANK BRENT, Smithshire, Ill.

TO TRADE.

Two-year-old iron gray Percheron stud colt; one bay Shire brood mare, 5 years; will weigh a ton, in foal. Both full bloods of fine quality but can not be registered under recent ruling, and some Missouri land to trade for first class Percheron or Belgian stallion. I also have for sale a 160-acre fine farm land in premium; 106.7 bushels per acre; corn growing county (Ransom county) North Dakota. Also county or state right for patented article that every farmer needs and buys at sight. Rights for sale or trade. Address **N. C. Sikes, Dallas City, Ill.**

PERCHERONS, BELGIANS AND GERMAN COACH MARES AND STALLIONS

of all ages for sale. I have recently taken over the entire stock of horses formerly owned by the firm of Ives & Bellman and can furnish patrons with first-class breeding stock of the foregoing breeds. Have a fine lot of last spring's and yearling colts, as well as mature stock to select from. Address, **WILL BELLMAN, R. 1, DELAVAN, WIS.**

150 STALLIONS

Imported and home-bred stallions. I guarantee to sell you stallions for less money than any firm in America. Come to a Live Horse Market and see all draft breeds. Reference, any Bank in Creston. **A. Latimer Wilson, Creston, Iowa.**

Valley View Stock Farm

Offers for sale, two registered Percheron stallions; one three and one two years old; both greys; will make ton or better horses at maturity. Large and muscular bone; good disposition; certificate of soundness. Bred strong in Brilliant blood, therefore extra good. Write or come.

G. B. Loper & Sons, Chesterfield, Ill.

stallion owner for six years and find it a paying proposition.

Your paper is certainly a help to me. I have taken it for three years and find that I could not do without it.—Walter C. Sawyer, Franklin County, Ohio.

A STRONG BOOST FOR PERCHERONS.

To the American Breeder: I am well pleased with your paper as it contains information on breeding horses that is impossible to get elsewhere. It handles each subject in such plain language that any ordinary farmer will understand.

I saw in the November 5th issue a letter from a Montana rancher who contemplates starting breeding horses from small mares, 800 to 1000 pounds. Now I will give him my experience of 40 years. I first tried in Colorado in 1873 with Ute pony mares weighing 650 to 800 pounds and an "Arabian" stallion that was 16 hands high and weighed 1100 pounds. The result was colts that weighed from 800 to 900 pounds, raised on the range in summer and winter, and in temper the most vicious lot of cayuses on the face of the earth. Just such horses as ruin the reputation of the western horse.

My next attempt was in Idaho in 1881 when I brought a bunch of Montana cayuse mares to Idaho (mares weighing 800 to 1000) and one of Raymond Belmont's colts from Virginia City. The result was quite an improvement; the cayuse in form but not in size; were only saddle horses for which there was but little demand.

Next I tried a Clydesdale on mares from 900 to 1100. I found a great number of the colts were deformed one way or the other. In 1890 I began to try the Percheron horse on these small mares and have not had a single failure. I find that a mare 700 pounds will raise a colt that when four years old will weigh 1200 pounds from a full blooded Percheron weighing 1800. I have in my herd today colts from mares 800 to 1000 that will weigh 1200 at two years old, so I would advise any man that wants to raise chunks and general purpose horses to breed to the Percheron. Be careful to select an individual whose blood lines runs in a straight line back to the old gray Norman Percherons, for he will give quicker results, both in form and color. Watch the circuses as they pass and ask the managers why they have so many gray horses, and you will find their answer, "Because it is the only horse that will stand the hardships induced by continually moving from place to place."—Theodore Pierce, Elmore County, Idaho.

SPECIAL KNOWLEDGE GETS HIM BUSINESS.

To the American Breeder: Horse breeding in this neck of the woods has been pretty dull the last two seasons. Three-fourths of the mares are bred to jacks around here. I have been getting the mares that the jacks could not settle. I do not breed any mares without examination. As soon as I open them up, I tell if there is any show of getting them in foal. I get 50 per cent of the mares in foal, but not all with natural service; part of them capsule. I have a Percheron stallion that weighs 1800 pounds, that is a sure foal getter. One of my horses has a bunch of long hair on knee cap (the mark of the old Flemish stock.—Ed.)

I started raising horses eight years ago with one mare that weighed 900 pounds. I stayed with Percherons and made two crosses. My biggest work horse weighs 1620 pounds in common working order. I get a lot of good information out of your paper.—Kansas Subscriber.

THIS IS GOOD STALLION MEDICINE.

To the American Breeder:—Many people look upon the stallion as a dangerous animal, and so conclude that close confiment is the only safe way to keep him. This, in my opinion, has ruined many a fine horse. A stallion needs exercise, and free, natural exercise is the best. He needs sunlight, and lots of it. I have handled stallions about 15 years, and when I had only one I had a small enclosed lot next to the barn so he could go out and in at will. During the breeding season I traveled him four or five miles each day on the road. This year I had one seven years old and two three years old to handle by myself, consequently could not give them exercise on the road, as that would take too much time. I got eight foot cedar posts (four ten foot for corners), and some five foot heavy American woven wire fencing, and built a lot 15 rods square on alfalfa and blue grass. A strip about four rods wide across one side of this lot was maple grove which was sodded to blue grass. I put the wire on the posts about ten inches from the ground and then strung a barb wire about four inches above the woven wire. This made a fence full six feet high. I also strung a barb wire along the woven wire about four feet from the ground to keep the horse from rubbing against it. I set the corner posts in cement and set an extra post to stretch from and nailed the wire solid on all the posts before letting loose. This made a very solid fence.

Now as to handling the horses. I would put one out early in the morning; then about nine o'clock take him in and put another out. After dinner would put the other one out for about three hours. I also have a small enclosed lot next to the barn, and while one horse is on pasture another is in this lot so that two are in the open air nearly all the time.

Not counting my own work this lot cost m about $50. It has been a great success with me and a wonderful benefit to the stallions. I hope some one may be able to get some ideas from this article that will be a benefit to them.—H. M. Stephens, Republic County, Kas.

BREAKING A YOUNG STALLION.

To The American Breeder:—I think the American Breeder is the best paper for the breeding interest of this country that ever was published, and has done more good than all others to the breeding business of this country.

I have been breeding since 1886, and I want to tell how I break young stallions to tease and serve. I always tease all mares that are on hand; then take the stallion back to the stable and tie him up; then get the mare that I want to serve in the chute; that is, a place planked seven or eight feet long against the side of the shed. Then I take a blanket, double it and fasten at breast; then put surcingle on tight. Then I bring out the horse and stand him opposite side of the shed; back the mare out and lead her up to the side of the horse; back him a step or two and let him go on. The first time or two you may have a little trouble to make him stand, but if you have a good bridle and handle him firm you can soon make him wait. The blanket serves two purposes; one is, that your horse learns that there is no business until the blanket is on, and then your trouble is over.

We breed with the capsule and have good success. Still, there are people here that won't breed that way, and they see the colts and see they are just as good. Why they are against the capsule I cant' tell.

I forgot to say that at the back end of this chute we have a strong door hinged to the wall and a hook. We keep this hooked back until we examine the mares then we close and fasten. Behind the mare, on the side of the wall, we have a one and one-half gallon can with faucet, and a five-foot rubber hose which we use to treat mares and flush them out. This, I think, is better than a pump as there is not so much force. With this outfit we have little trouble. Maybe someone will have a better outfit than we have, if they have hope they will write about it.—A. L. Hedrick, Edwards County, Illinois.

INSPECTION FOR THE MARES, TOO.

To the American Breeder: As we horse men of Iowa have to have our horses examined so strictly, I think the law on the service fee should be more strict. As it is, we only have a lien on the colt. Now I claim that we should have a lien on the mare for at least eighteen months after breeding for this reason: There are so many mares bred and sold or traded before the colt is foaled, and the way all of the horses are billed here, the money for service is due when mare changes hands, and if the colt dies we have no way of collecting our money, but when mare is disposed of our money is due and no way of collecting it. It is only one man in ten that will pay when they sell a mare, and a good many if let alone would be working the colt before it would be paid for.

I have been keeping stallions for 13 years and the biggest fault with the business I find is to get the men to come back to try the mare. I think when our horses have to be

TRUMANS'

1878—Pioneer Stud Farm—1913

The Best in Imported Draft Animals

For 35 Years

We have been bringing to this country a class of Percherons, Shires, Belgians and Suffolks which were distinctly superior and these we have sold to the American horse improvers by such methods and under such terms as have stood the test of time.

By frequent regular importations of high class animals our barns are kept well stocked and inspection is at all times invited.

so free from diseases, and if they have anything wrong with them we have to publish it, why not have the mares pass examination and furnish a certificate of health, and if found to be free from any of the catching diseases, and be sworn to by a licensed veterinarian, and if anything is wrong let it be made public. Then when a man comes to breed, bring his certificate with him, and we would know what to expect. We are not all able to tell when a mare is in a fit condition to breed. It is a poor rule that will not work both ways.—J. F. Coleman, Monroe County, Iowa.

COMPLAINS OF THE STALLION LAW.

To the American Breeder: Our stallion registration laws gives you a lien on the colt until it is one year old. Would like to know how to proceed to collect the fee for a colt where the owner of the colt refused to pay for it. If you have to go into a law suit and hire a lawyer it will cost three or four times the season of the colt to collect it; then the stallion owner is not much ahead.

Why not make the law so the stallion owner can send an officer and attach or levy on the colt and hold it until he gets his pay. In fact, I don't think much of this registration law anyway. As I understand it, one feature is to keep a man from misrepresenting a grade horse for a registered one, but I have a thoroughbred horse or a cross bred horse, and one link of his registry is missing, then I have to register him as a grade. A lie in one way is no worse than in another. I hope to hear from others on this subject.—Wm. Crumrin, Clark County, Ill.

MORE DEMAND FOR MARE INSPECTION.

To the American Breeder: You ask if the lien law is satisfactory here. No, it is not. Our representative two years ago tried to get a bill through giving the stallioner a lien on the mare and offspring. It got no farther than the committee, but they gave the stallioner plenty of law. Why not have a law compelling the mare owners to have their mares examined, say in March each year. If in healthy condition to breed give a certificate. It would save many good horses and jacks. It would shut out the shy breeders and trading mares. Fillies that have not been bred should be exempt from examination.—I. S. Owen, Jefferson County, Kans.

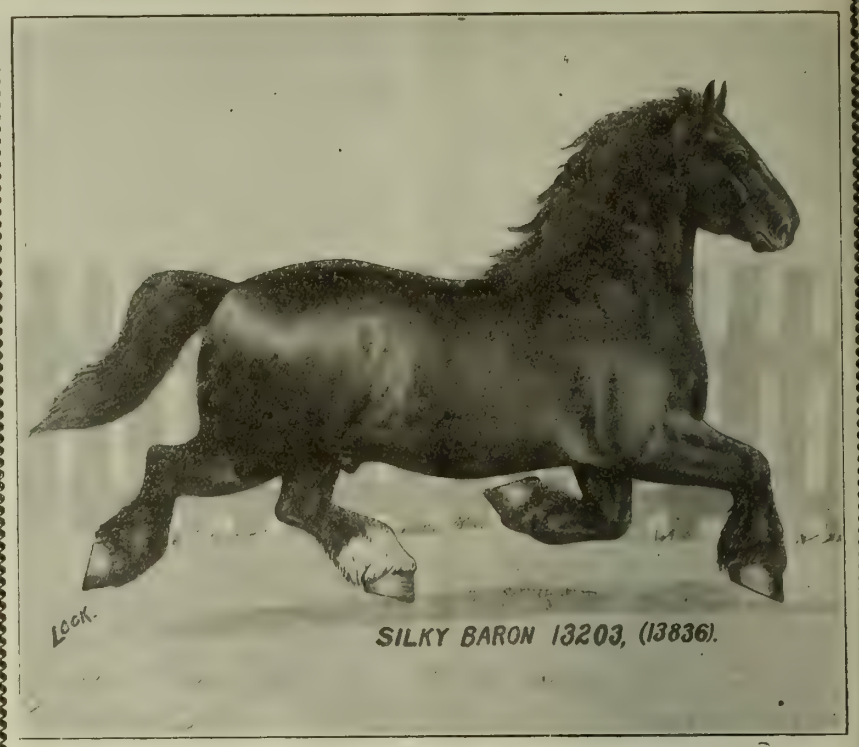
MEASUREMENTS OF WELL FED COLTS.

To the American Breeder: As there has been a lot said in your valuable paper in regard to the size and measurement and weights of colts, I will report on two Percheron colts that I led five miles and weighed them. One was 7 months and 8 days old, weighed 980 pounds, measured, height, 59 inches; around the front arm, 21 inches; below the knee, 9½ inches; around the hock, 19½ inches; below the hock, 11 inches. The other colt was 5 months and 15 days old, weighed 840 pounds and measured, height, 58 inches; fore arm, 18 inches; below the knee, 9 inches; around the hock, 18½ inches; below hock, 9½ inches. Is there any danger of having a young colt too fat for its bones? Some say mine are too fat. They are in good growing shape, I think.—Henry Stamm, Cheyenne County, Kansas.

Note—If any one has injured his colts by having them too fat we will be glad to print his experience.—Editor.

REPORTS A STOCK POWDER SWINDLE.

To the American Breeder: I admire Mr. Graham, the publisher of this great paper. The principle he takes for honest and square dealings with his readers. I was in his office last May but regret that I did not get to meet Mr. Graham for I certainly would have liked to take him by the hand. We need more men to come out for just what they stand for and do what they say. There are other crooks that ought to be exposed and I am going to give you readers a little tip to be on the lookout for some I have fallen in the hands of.

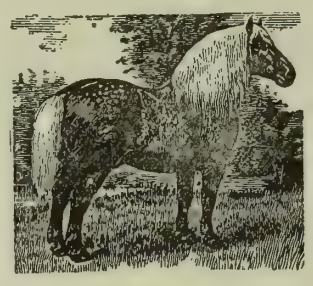


A firm in Omaha, Neb., known by the name of ———— Co. (also operating under the name of ———— Co.), came along and swindled me out of all I had. I don't know how many ways they have to catch a man, but they sell a stock powder and sell him a car load and give him a cheap automobile to go and sell it. Will trade stock powder for stock, or for land. They claim they will do lots of things and when they come down to the pinch they will take all you got and let you go. I am not writing this to knock against this firm but to put the readers next so you will be on the lookout. I traded my pure bred stock and all I had on a Kansas farm, worth $50 per acre. I brought suit against this firm in the Renro County, Kansas, court and recovered $2,000, of which I had to pay my attorney almost half. I enclose clipping from my old home paper of another case.

Hope I will sometime be able to own some more pure breds, as they are the cheapest for anyone to raise. I started in the pure bred horse business by buying a team of pure bred Shire mares for the sum of $1,400. I raised five colts, my oldest being a stud. I showed this colt nine times, won eight first premiums and one second. Wishing all the readers of the American Breed a Merry Christmas and a Happy New Year, I am, H. F. Wise, Alberta, Canada.

RAISING A ROAD STALLION.

To the American Breeder: I raised my road stallion, Major Hal, from a baby. When he was six months old I put him in a box stall and his dam in another beside him. In a few days he seemed to forget her. I fed him two quarts of good, clean oats three times a day with an occasional bran mash and a nice bunch of clover hay. In the spring when he was a year old he weighed 650 pounds. He was kept in barn and lot all the summer as he was so "cagy" I could not turn him out. The second winter he had a good, warm stall and on cold, bad nights a good blanket. His feed was increased to about three quarts of good oats with some bran and



Two Stallions for Sale; also Fillies and Mares

One Black Percheron 3 years old; one Clydesdale 2 year old, and a bunch of Clydesdale Fillies and two mares 7 and 8 years old. This is all registered stock—some of them from imported stock on both sides. For further information inquire of

R. I. LITTLE,
Fairfax, Iowa. Route 2.

shorts three times a day with clover hay and fodder. In January of the same winter he was educated to the harness and was driven lightly in the spring and summer. The third winter he was fed about the same as the second with some carrots, potatoes and cabbage as desert. Now I have a paddock for him to run in on good days, and I make it a habit to drive him at least four times a week. As he is now going into his fourth winter he is receiving three quarts of oats and an ear of corn at a feed, and a pinch of salt with each feed. His hay consists of a small bunch morning and noon and a larger bunch at supper of alfalfa and mixed hay. I keep water by him day and night. I find by this kind of treatment that my horse has never been sick a day in his life. The only fault I can find with him (and that is not a bad one) is, you can hardly keep him on the ground, he feels so gay.

Now I would like to hear from some kind brother who has raised a stud. The colt now is 15½ hands high and last spring weighed 1065 pounds.—W. L. Mason, Pickaway County, Ohio.

WHERE JACKS ARE A RARITY.

To The American Breeder:—We have had freezing weather up here for the last three weeks and a little snow off an on, but we have long cold winters here. There are many days in these months that the stock cannot stay out. Straw piles have been the chief feed for stock up here, although there is a silo put up here and there in the last year or two.

Breeding is far behind the Eastern states. There are about two grade stallions to one pure bred through this country and only a difference of $2 to $4 a colt. There are new farmers moving in here from Eastern states that now have the habit of looking for good stock and are helping their neighbors, which will help us all in time. The American Breeder speaks so familiarly of jacks, but up here I know of only four jacks in two counties, and they are small jacks, too. I was talking to a friend of mine, telling him I was going to bring a good, big jack in my business, one about 16 hands standard with ears two feet long. The answer was, "What an awful looking beast it must be," and "I don't want none of them in my bunch." So I am afraid I will have poor picking the first year with a jack.

Pure bred cattle are very scarce here. One of our banks brought in two carloads of Holstein, or 14 cows with calf, which sold from $175 to $300; 15 bulls under one year that sold as high as $250, and 11 heifers under one year which sold as high as $225.

Fall breeding for colts is very scarce here.—Albert Kroll, Becker County, Minnesota.

THE COLOR FAD.

To the American Breeder: I think the "Color Fad" is the greatest evil the jack breeders have to put up with at present. Many jack breeders are discarding many of the essentials of a good jack for the one thing; that he be black with white points. If breeders do not quit that plan they will soon have a jack black with white points and that will be all. I believe we breeders should strive to breed jacks of a uniform type and well proportioned, with color as a minor consideration. This color fad is going to be the ruination to the jack if they do not quit following it. I'll admit that a grey or a blue jack will not sell for as much money as one black with white points, although they come up with them in all their makings. But I believe they should, and I do believe that blue and grey jacks have sired as many high class mules as those black with white points. My idea of a good jack is one with good head, ear, bone, foot, body and well proportioned, regardless of color. Now I have expressed my opinion on this subject, let us hear from others. —Frank Mills, Rice County, Kansas.

GOOD COUNSEL TO JENNET OWNERS.

To the American Breeder: I am a subscriber to your valuable paper and am puzzled to know how you get so many good things bundled up for us in each issue. Each paper, I think, is worth a dollar to any breeder. Now as I want to help boost I will give my experience in breeding jacks and jennets.

The young colts are very tender the first few weeks and require much better care than horse colts. When colts are foaled in the early spring, and especially where the jennets are running on pasture, they should be watched very carefully. A colt dropped on damp ground will soon chill, especially if it is a weak one. Take your colt and its mother to a good, warm box stall; give them some good, dry bedding, for a good, clean stall has much to do in preventing navel poison and other kindred diseases.

Now don't get in too big a hurry to turn your colt out, and be sure that he gets his dinner all right, and at the same time don't forget to watch his bowels and water. Keep your eye on the clean bed, for this is very important. Now if your colt is doing all right and the weather is bright and warm, turn the jennet and colt out, but if it is cloudy and chilly he is a long way better off in the barn. My experience has taught me that most young colts die from exposure to bad weather. The two first years of a colt's life requires good care and I might say good feed, if you expect him to look good at that age.

If colts come during fly time, especially if flies are bad, if the colt comes weak and unable to get up when it should, the flies will at once leave the mother and settle on the young colt and in two or three days you will see the colt begin to puff up in different places. Corruption will form in these puffs in from two to five days. They will generally live from eight to ten days, then die.

This is neglect. Pick your colts up as quickly as possible; protect them from the poison enemies; especially if the jennets are on pasture. The very colt you neglect might be the best one you ever bred. Who can tell until it is developed?—C. H. Hearson, Cass County, Mo.

TREATMENT FOR LOUSY JACK.

To the American Breeder: I saw in your paper an article where a Kansas farmer wanted to know how to kill lice on his jacks. Use Hess's Louse Powders according to directions, then put a blanket on your jack and keep it on until the powder takes effect, about 15 or 20 minutes.—E. P. Davidson, Benton county, Mo.

A GOOD RECIPE FROM CUBA.

To the American Breeder: I notice in your issue of the 20th someone has a jack with lice. The wash we use here for ticks will destroy ticks, lice or ants, and is not injurious to animals. It is composed of the following ingredients: one-quarter pound arsenic, three-quarter pounds soap, three-quarter pounds sal soda, one-half pint tar. Put into three gallons water, boil for 45 or 50 minutes, then add enough water to make 16 gallons. It is then ready for use. Rub it into the hair all over clear to the hoofs and in a couple of days you won't find a live tick or louse, and to pour a little into an ants' den will exterminate them in a few applications. —A. W. Ward, Santa Clara Providence, Cuba.

JACKS AND JENNETS

FOR SALE. Registered Jacks; all blacks with white points; from 15 to 15½ hands, 3 to 5 years old; well broke and as good as grow. Jacks from the great Dr. McCord No. 1766, and Dr Long No. 1767. We have colts from both. The above jacks are ready for service. This stock is right, raised right and priced right. Farm one half mile from station on C. & A. railroad.

DILLINGHAM & DEWITT,
Blue Springs, Mo.

GOOD HERD JACK
For Sale or Trade,

I will sell my Starlight bred herd jack or trade for another herd jack as good as he is. His register No. 2527; 62 inches high; 9½ inch bone; 72½ inches around girth. Is a good one. Lots of colts to show. Have jennets in his way, the reason for selling.
ELWOOD RUSH,
Lockwood, Mo. Rte. 1, Box 59.

JACKS AND JENNETS

Any age; one or a car load for sale, or will trade. Inspection invited.
GUY W. FISHER,
Frankford, Pike County, Mo.

THE OLD RICHMOND JACK FARM

I make a specialty of breeding big registered jacks, with lots of bone; substance and finish. These jacks are raised right and all good servers. I also have at all times imported and American bred Percheron stallions. Prices right. Terms to suit.
W. H. SKIBINSKI, Richview, Ill.

JACKS AND STALLIONS

For sale. Registered jacks; all black with white points; from 15 to 15¾ hands; from 3 to 6 years old; well broke and as good as grow.

Percherons from 2 to 8; the big, good kind, weighing from 1700 to 2100 pounds; all guaranteed as represented.
J. E. PARK, Owner, CAMERON, MO.

JACKS AND JENNETS.

Thirty-five head of Mammoth jacks and jennets for private sale. Jacks in age from 1 to 5 years old; in size up to 16 hands. These jacks are all good ones, black with white points. I have one of the best herds of jennets in Kentucky. I raise all of my own stock and will sell them worth the money. Write for prices today, or better, come and see them.
U. G. SAUNDERS, Flemingsburg, Ky.

120 MULES AND ONE JACK

For sale. Yearlings and two year olds. Winners. From large jack and good mares.
POINTS & TOWNSEND,
White Clay, Nebraska.

GOOD BLACK JACK

For sale; 3 years old last August. Sure breeder. Price to sell quick $500, as farm is sold.
THOMAS GRUBB, Brookfield, Mo.

STALLION, JACKS AND JENNETS

For Sale—A 5-year-old Percheron stallion; weighs a ton. Six jacks and 16 jennets. Horse and jacks blue ribbon winners. Am closing out. A bargain for some one.
H. A. WEHRMANN, Monticello, Lewis County, Mo.

BLACK JACK, MEALY POINTS.

For sale; 15 hands high with good bone and body; 7 years old. A good breeder and quick server. Am quitting the business, reason for selling. Price $400. **E. J. Munter, Vandalia, Fayette County, Ill. Rte. 3.**

Registered big boned Black Jacks and Jennets. Fine individuals: best breeding; priced right. **J. H. SMITH, KINGFISHER, OKLA.**

JACKS FOR SALE—Born July 3, 1912. Black, mealy points. Dam weight 940 lbs.; sire weight 1,070 lbs. Fine, big colt. Price, $250 cash. Eight-year-old black jack, weight 920; sires lots of fine mules. Price $300 cash at once.
E. R. SMITH, Owner, FAIRFIELD, IA.

JACKS FOR SALE—Ten jacks from 1 to 8 years old; from 15 to 16½ hands high. If I can't show you as good stock as there is in the United States. I will pay your railroad fare. Come and see me.
W. L. GRAHAM, MACKVILLE KY.

FIELD NOTES

PUBLIC SALE DATES.

Upon request we will announce, under this head, free of charge, the date and location and the name of proprietor or manager, for all public sales of pure bred live stock which are to be advertised in the columns of the American Breeder.

Percherons.

Dec. 9—W. S. Corsa, White Hall, Ill.
Dec. 10—A. L. Robison & Son, Pekin, Ill.
Jan. 7—H. A. Holdridge & Son, Saunemin, Ill.
Jan. 27—Lee Bros., Harveyville, Kas. Sale at Manhattan.
Feb. 12—John H. Decker, Piper City, Ill.
Feb. 19—Chas. Irvine, Ankeny, Ia.

Belgians.

Feb. 19—Chas. Irvine, Ankeny, Ia.

Shires.

Dec. 11—Truman's Pioneer Stud Farm, Bushnell, Ill.
Jan. 15—C. C. & R. W. E. Williams, Bushnell, Ill.

Percheron and Other Draft Breeds.

Jan. 27 to 30, inc.—Bloomington, Ill., C. W. Hurt, Mgr., Arrowsmith, Ill.
Feb. 3, 4 and 5—Breeders' Horse Sale Co., Thos. J. Kennedy, Secretary, Streator, Ill.

Chester White Hogs.

Feb. 10—B. M. Boyer & Sons, Farmington, Ia.

Jacks and Jennets.

Feb. 26—H. T. Hineman & Sons, Dighton, Kas., and D. J. Hutchins, Sterling, Kas. Sale at Sterling.

Taylor & Jones of Williamsville, Ill., write: "Our horses are doing well and we are having good sales thus far this fall. We have a good representative lot of Percheron, Belgian and Shire stallions, imported and American bred and in order to make room for our new importation soon due to arrive, we are willing to make especially low prices on anything we have in the barns. Bear in mind that with every stallion goes our written binding guarantee that is as good as can be written, appealing to the judgment of any business man."

C. F. Jones of Rippey, Iowa, advertises in this paper one of the most drafty and heaviest boned Percheron colts foaled in 1912. This colt at 18 months weighs 1,500 pounds or better. The photograph in the ad shows that he is all we have stated. Please mention the American Breeder when writing to Mr. Jones.

Wm. Crownover of Hudson, Iowa, though not claiming to be one of America's "greatest importers," stands today on a level with any of them, strictly through the extreme high quality of his stock. Such horses as Farceur, his grand champion Belgian, and Surveyor, said to have sired more good horses than any other Shire in America, have won him this position.

Hugh M. Cottier, Mound City, Mo., is advertising a Percheron stallion for sale or trade for jack or Percheron mare. He also has a three year old Percheron for sale. Look up the ad in this issue.

John Henry, Fairfax, Iowa, has large Mammoth jacks for sale from $250 up. If interested, write him for description.

12 Head of Jacks

For Sale—2 to 5 years old; 14½ to 16 hands. I need room and will price right. **Ben M. Green, Cape Girardeau, Mo.**

JACKS FOR SALE.

Seven first class jacks; ages one to six. Bred right; raised right. Priced to sell. Colts to show. Mares in foal for those of proper age. Also some good jennets; ages one to seven.

L. W. Garriott, Austin, Scott Co., Ind.

W. H. Richards of Emporia, Kas., is one of the safest importers in America to buy draft stallions from. Mr. Richards is a practical horseman and graduate veterinarian of wide experience. He selects his importations personally and buys nothing but clean, sound horses of a kind to benefit any American community. Read his advertisement. It is a plain statement of just what you will find at his barns.

Ben Bohlander & Son of El Paso, Ill., Percheron breeders and importers, are one of the greatest draft horse districts in America. Nothing but good horses will pass, even for local trade, and Bohlanders stand at the head in their section. They handle good Percherons exclusively.

L. N. & O. B. Sizer of Fisher, Ill., begin advertising in this issue. They breed Shire horses exclusively, and "Sizer's Shires" have been among the best prize winners at the big fall shows, including the International Live Stock Show held last week. Read the advertisement.

The Simplex Spreader Company, 345 West Tenth Street, Kansas City, Mo., make the only practical straw spreader on the market. This is a machine which should be put to work at once on every farm where there is a surplus of straw. Straw scattered on the ground in early winter is in best condition for supplying needed humus for the soil when spring plowing comes.

North & Robinson of Grand Island, Neb., probably have more satisfied customers who have bought Percherons, Shires or Belgians of them than any other Western firm of importers and breeders. They have several hundred acres of the best Nebraska soil devoted to the developing and production of this class of horses. This not only enables them to sell on an economical basis, but to put out horses that are thoroughly conditioned for Western use.

Dunhams, Wayne, Du Page County, Ill., besides being one of the biggest modern Percheron importing establishments of America, is one of the landmarks in Percheron history, for it was the father of the present proprietor who was largely instrumental in putting the Percherons in the predominating position which they now occupy on the map of American draft horses.

The American Steel & Wire Company, manufacture the woven wire fence which today is practically the standard for this country. Go into any progressive farming community and a majority of the practical men you ask will tell you that the American fence is the best woven wire fence on the market. Tell the man through whom you buy your fencing that you read this in the American Breeder.

R. A. Smith, 1779 Union Pacific Bldg., Omaha, Neb., is the man to write for information concerning the farms and stock ranches to be bought in the healthy, progressive country traversed by the Union Pacific Railway.

The Lakeside Remedy Company, 5410 Calumet Ave., Chicago, Ill., begin advertising in this issue their remedy called "Clear Eye." See the ad for particulars.

L. R. Wiley of Emporia, Kansas, not only imports Percheron, Belgian and Shire stallions and mares, but his firm owns a big breeding farm 20 miles west of Emporia, on which are produced annually a fine line of horses of these breeds. See him for imported or American bred stock.

J. T. Watson, New London, Mo., starts his ad in this issue. Mr. Watson has a fine bunch of jacks and jennets priced right and invites our readers to come and see them.

E. P. Hamilton & Sons, Garden Grove, Ia., have registered road and draft stallions and mares for sale at first cost. Read their ad.

W. L. Graham, Mackville, Ky., invites our readers to come and see the jacks he has for sale.

J. E. Decker, Tiskilwa, Ill., is advertising in this issue a closing-out sale of Percherons on January 14. Any one interested should send for a catalogue at once.

W. M. Richards, Emporia, Kans., starts his ad in this issue. Mr. Richards has imported Percherons and Belgians personally selected and gives a gilt edge guarantee with each animal good for two years. Any one in the market for stock of this kind should not fail to write Mr. Richards for prices and description.

E. A. Silverthorn, Rossville, Ind., is advertising registered Belgian Stallions in this issue which he will price right.

E. R. Smith, Fairfield, Ia., has two jacks advertised for sale. Price, $250 and $300, if taken at once.

Wyatt Carr, Collins, Ia., is advertising Arabian horses, jacks and mules for sale in this issue. See the ad.

Richard Sellman of Rochelle, Texas, has a new ad in this issue on his Morgan horses. Read what he says.

Charles W. Stewart, West Chester, Ia., has a matched pair of Suffolk fillies for sale.

H. E. Hander, Garden City, Mo., is advertising a Percheron stallion and a Mammoth jack for sale in this issue. Write him for full particulars.

MISSOURI REGISTERED MAMMOTH JACKS AND JENNETS

FOR SALE AT ALL TIMES.

As fine a bunch as can be found on one farm. Guaranteed as represented. Prices right. Come and see them.

J. T. WATSON, NEW LONDON, RALLS COUNTY, MO.

HEADQUARTERS FOR JACK STOCK

LIMESTONE VALLEY STOCK FARM.

The best trade of North America has for years supplied itself largely with Jacks and Jennets from our herd. The World's Greatest Show Yard Winnings and Public Sales are a part of our record. The same honest values always open to private buyers; the Square Deal for all.

L. M. Monsees & Sons, props., Smithton, Mo.

5th ANNUAL PUBLIC SALE

OF 25 HEAD OF HIGH CLASS REGISTERED BLACK JACKS AND JENNETS.

JACKSON, MO., TUESDAY, FEBRUARY 10, 1914.

Every animal guaranteed to be as represented. Nothing priced or sold privately after catalogued. If interested, **write for catalogue and come to the sale.** You will not be disappointed but highly pleased with the offerings. Catalogues will be ready to mail February 1, 1914.

W. F. SCHADE **Jackson, Cape Girardeau County, Mo.**

C. C. & R. W. E. Williams, Bushnell, Ill., are going to hold a public sale of Shire mares and stallions on January 15, at Bushnell. The stallions range in age from weanlings to four-year-olds, and 25 mares and fillies. Write them for a catalogue.

J. C. Hagens, Pella, Ia., is advertising two imported Percheron stallions for sale; one eight years old and the other two past. These are both registered. Write him.

J. F. Campbell, Watertown, Minn., has a French draft stallion for sale cheap or will trade in on a stallion or jack, as he cannot use his stallion longer on his fillies.

G. M. Scott, Rea, Mo., starts his regular card in this issue. Mr. Scott makes a specialty of high class jacks and jennets and guarantees every animal as represented. He invites inspection of his stock.

W. C. Moore, Parsons, Kans., Jack and Stallion Broker, is advertising two jacks for sale in this issue. The ad gives a good description of this stock. Don't fail to read it.

H. C. Stryker, Rising City, Neb., has some Percheron stallions for sale. These are prize winning stock. Read the ad and then write for further description.

Leo T. Perkins, Kirwin, Kans., is advertising two Percheron stallions for sale cheap, or would trade for another horse, or cattle. Read the ad.

Anderson, Bicknell Company, Lovington, Ill., has some bargains advertised in this issue in the way of a Percheron stallion, Belgian stallion and a Thoroughbred stallion. They will sell these stallions very cheap in order to dissolve partnership. Read the ad.

Amos Hanson, Collins, Ia., has a Coach stallion for sale at $500, with terms to suit. See the ad.

Mrs. Charles Hayer, Holden, Mo., has a black Percheron stallion for sale at a bargain, on account of her husband's death. For particulars and price write Mrs. Hayer at Holden.

W. F. Schade, Jackson, Mo., will hold his fifth annual public sale of high class registered jacks and jennets at Jackson, Mo., on February 10. Catalogues will be ready to mail out February 1. Don't fail to send for one.

S. A. Farnsworth, Blairstown, Mo., is advertising three jacks, from 3 to 5 years old, in this issue, at reasonable price.

The Harrah Mfg. Co., Drawer O, Bloomfield, Ind., is advertising an "Automatic Combination, 12 Tools in One," used by contractors, farmers, teamsters, fence builders, threshers, miners, etc. Write the above company for the facts about this tool.

John Sparrowhawk, Wakefield, Kans., has stallions, fillies and mares advertised for sale in this issue. This is all registered stock. Look up the ad and write Mr. Sparrowhawk for full particulars.

J. H. Smith, Kingfisher, Okla., starts his ad in this issue. Mr. Smith has big boned black jacks and jennets.

C. G. Welsz, Palmyra, Mo., is advertising a bargain in the way of a French draft stallion and two registered Percherons. Look up the ad.

E. D. Cheney, Hillsdale, Mich., is advertising a Belgian stallion for sale that he will sell at a sacrifice, as he has not time to devote to the business.

Z. R. Reynolds & Son, Guthrie, Mo., are advertising jacks and jennets for sale worth the money. See the ad.

Box W, Prairie View, Ark., has a jack advertised in this issue at a bargain; $200 gets him. Look up the ad.

Young Jack--$350 Cash

Black, white points; 3 years old October 24, 1913. Broke and a quick worker; good size; plenty of bone. Am quitting the business. Write for photograph and description in full. Price, $350 cash. **WILLIAM. CROSBY, PRAIRIEBURG, LINN COUNTY, IOWA**

Jacks and Jennets

Nine jacks for sale, worth the money. These are as good as grow. Five of them herd headers. Also Jennets for sale. Visit our barns and see for yourself.

Z. R. REYNOLDS & SON, GUTHRIE, Callaway County, MO.

A "BEST" BARGAIN.

Young Jack. Made his first season this year. A sure foal getter, and as quick and active as any jack. Dark grey; is undersized on account of being a twin. His sire and dam are both large and of Mammoth stock. His sire showed the best of mules and this colt should and will be his equal in every way, except size. Will sell for less than half value. $200 gets him.

Address, Box W, PRAIRIE VIEW, Ark.

THREE JACKS FOR SALE—From 3 to 5 years old; about 15¼ hands high; large, heavy bone and registered. All black with white points. Price reasonable if sold soon. Address **S. A. FARNSWORTH, BLAIRSTOWN, MO.**

ONE JACK IN A THOUSAND

and the result of 40 years of intelligent breeding; 5 years; black with white points; 15-1½ standard; very toppy, wide, deep; perfect in neck from withers to hip, and hip to tail just right; legs like a coacher, travels plenty wide and true; snap and action like a colt; perfect handler and the best head I ever saw. For sale by breeder who traveled 5,000 miles to find his sire. This young jack a real counterpart of typical show mule. If $1,200 is too stiff don't take my time. The sire (an aged jack) at $800.

W. C. MOORE, PARSONS, KANS.
Jack and Stallion Broker.
List your wants and stock.

JACKS AND JENNETS

I make a specialty of high classed jacks. Come to one of the oldest jack farms in the state and see what Missouri really can produce. If disappointed will pay your expenses. Every jack guaranteed as represented. This card is to parties wanting the good kind.

G. M. SCOTT, REA, MO.

JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Moline, Elk County, Kas.

You can make big money farming in Arkansas

Same Latitude—Same Crops

THE soil is newer, richer and much lower in price. A splendid climate makes it possible to produce bountiful crops of nearly every variety known to man. It will pay you to investigate.

ALFALFA AS A MONEY MAKER

Rich alluvial soil is what is wanted for the successful growing of Alfalfa, the king of forage crops. The Red River Valley has this kind of soil in abundance—nothing better anywhere. We can recommend this land to well-to-day farmers who want something really good. Ample rainfall.

A CROP EVERY YEAR.

Write for free booklets and magazines to the Kansas City Southern Ry., Wm. Nicholson, Immigration Agent, 671 Thayer Building, Kansas City, Mo.

A "REGULATOR" FOR STOCK.

To the American Breeder: After reading a great deal about stock dying from eating damaged feed, I will give a remedy, or rather a preventative, as an ounce of preventative is worth a pound of cure. Keep salt, two parts, and sifted wood ashes, one part, by stock all the time, and feed any kind of feed preferred. I handle a heap of stock of all kinds and have not had any sick stock of my own for several years. I feed regularly and give stock free access to water. I have raised a heap of jacks and have never lost one in my life.—J. E. Ruby, Meade County, Ky.

LATER LIVE STOCK RECORD MEETINGS.

To the American Breeder: The next annual meeting of the American Breeders' and Importers' Percheron Registry will be held at the Chittendon Hotel, Columbus, O., Tuesday, January 14, 1914.—John A Forney, Sec.

To the American Breeder: The Brown Swiss Cattle Breeders Association meets December 10 at Rochester, N. Y., Hotel Rochester. —Ira Inman, Sec.

SEES BEST PROFIT IN MULES.

To The American Breeder:—As we have handled jacks for the last 15 years, have had a great deal of experience in the breeding business. Have got three jacks now; one a brown, weighs 1,140; another a dark gray, weighs 950, and I think the best built jack I ever saw. Is also an extra good breeder. We do our teasing with this jack. He does a better job than a horse, if it were not for some mares being afraid. Also have a three-year-old brown jack, weighs 1,020. Suckling mules from these jacks have been selling from $80 up to $125 at weaning time. If a person has a good suckling mule and does not want to sell it, he does not want to price it, as weanling mules are almost as high as yearlings.

We have not had any disease among the mares in our community, but I do not think it advisable to breed all mares presented. We raised a pair of twin mules last year. They are going to make a very nice little team. Are well matched in color and size—one mare and one horse. I think the mule business is more profitable than the horse business, unless you handle pure bred stock. You can get almost as much for one good suckling mule as you can get for two (better than the average) draft colts. At least, this seems to be the case with us.—A. F. Bargenholt & Sons, Adams County, Iowa.

THE PURPOSE OF "PIG CLUBS."

To the American Breeder: In organizing the Boys' Pig Club it is the purpose of the department to establish clubs in every Southern state. Our animal husbandry division is cooperating with the farmers' co-operative demonstration office in our bureau of plant industry, and has already established clubs in Alabama and Louisiana, and the movement is under way in Georgia. The organizing is being done by the officials of the farmers' co-operative demonstration force, and the animal husbandry agents are instructing and demonstrating how to handle the stock and to breed a superior type of pigs.

It is the purpose of the department to have every member of the club encourage not only an increased production of the swine family, but a better breed of pigs than is being raised at present. It is a serious purpose the officials of the department are engaged in—one that is aimed at the high cost of living.

The production of pork is not keeping pace with the increased population and something must be done to harmonize these two elements. If each member of the club—and they will be growing it is expected all the time—will see to it that one more pig and a better pig is produced each year then a long step will have been taken in meeting the ever growing chasm between pork production and increased population.—U. S. Department of Agriculture.

BORING FOR FACTS.

To the American Breeder: W. A. Boys, farm demonstration agent at Hays, Kas., uses an augur to show farmers the proper methods of moisture conservation. Armed with this instrument he goes into the fields of farmers and determines the depth of moisture in fields that have received different treatment. In one such test it was learned that the water, which had fallen recently, had not penetrated more than eight inches deep in stubble ground, while on stubble that had been disked immediately after harvest the moisture had reached a depth of eighteen inches. In corn stubble land the moisture had soaked twenty-four to thirty-six inches in the ground, while on potato ground that had been kept clean and well worked the water had penetrated thirty-six to sixty inches. Mr. Boys believes that this simple demonstration is one of the most effective ways to teach moisture conservation, by early preparation of the land.—Kansas Agricultural College.

Enrich Yourself

Supplying a Great Demand

The price of beef is steadily rising, due to the shortage of beef cattle. It is no longer profitable to raise cattle on ranges. That was a wasteful method, and with the passing of free pasturage the costs are too great to leave a profit. Yet people need beef and are willing to pay good prices to get it. That is the demand you may profit by supplying.

Search all over this continent and you will find no section in which cattle do as well or can be raised as cheaply as on the plains of northwest Texas. It is the natural home of the steer. Here great herds roamed in the early days. They fed on the luxurious grasses and went to market without grain. Latterly their weights and the owners' profits have been increased by grain-feeding near to the slaughtering market. But that is now too expensive, considering the high price of corn.

It has been found that the steer can be fed and finished here on ensilage and milo and kafir grain. The cost of feeding is reduced — the quality of the meat improved — a better price is secured and once again beef cattle are money-makers.

The territory available for this work is the millions of acres of northwest Texas, where the rainfall is less than twenty inches a year. It is too dry for corn, but milo and kafir thrive under dry-farming methods.

Herefords are graded up to nearly pure blood and they are the most profitable animal to feed. Weanlings can be brought up to 1,400-pound steers in less than three years, and this young beef sells well, saving a year's time, interest and feed.

Hogs thrive on the same feed. This is their climate, too, as there are no diseases in the high, dry air.

Lately it has been found that upward of one million acres of this fertile prairie is underlaid with an inexhaustible supply of pure water, near enough to the surface to be economically pumped and used for irrigation. This water makes the production of tremendous crops of feed easy and certain. With water, 50 bushels of wheat, 100 bushels of oats and 80 bushels of kafir are not unusual yields, and a small acreage of the irrigated land with a larger area of the dry land forms an ideal stock farm. Irrigation here means stock-feed insurance and is a guarantee of your profit.

The opportunity here is described in detail in a new folder just issued by the Santa Fe entitled "The Shallow Water Country of Northwest Texas." I would like every stock-grower in the country to read it as well as our leaflet, "Letters from Farmers." Then, if you are interested in following the matter further, I will be glad to place at your service the faculties of this department to assist you in finding the location best adapted to your needs.

The interest of the Santa Fe in settlers along its lines does not cease with helping them to select a location. We have a corps of agricultural demonstrators, who are employed by the railroad to help settlers to learn as quickly as possible the best crops and methods of handling for any given section. The assistance of these men will be yours without cost, and the enthusiastic letters from settlers already here will show you that their advice means a large increase of profit to those who have taken advantage of it.

Drop me a postal for this "Northwest Texas" folder and leaflet.
C. L. Seagraves, General Colonization Agent, A. T. & S. F. Ry,
2511 Railway Exchange, Chicago.

POSSIBILITIES IN GRADE HORSES.

To The American Breeder:—Last year there were several fine large draft geldings sold in this locality. I was anxious to find the sire of those horses. After considerable investigation I found that nearly every one was sired by a grade horse. A little more investigation revealed the fact that the grade was really a well bred horse; that is, we have discovered at least five good top crosses. I purchased that horse and we are now making an effort to have him registered in the National French Draft Association. He is a big fellow, weighing a little over a ton and is really a high class draft horse. This has caused me to look up the breeding of some more grade horses throughout the country, and I find that where a grade horse sires good colts he has had several crosses from good sires. .I am of the opinion that nearly every grade horse that sires good colts comes by this ability in some such a manner.

There are a lot of good horses over the country that might be registered in the French Draft Association. This association is recognized and in my opinion is one of the best records we have.

Among the grades we occasionally find a stallion that sires a few excellent colts and a lot of poor ones. This kind should not be maintained in the stud. It is this kind that has given the good individuals among grade horses a bad reputation in general. We have reached a stage in

our horse breeding that more attention should be given the grading up of this class of live stock. There is, I find, this difficulty: The owners of many grade horses do not know what a good horse is, consequently they are not able to judge the good qualities of the get. More education on this subject would mean better sires generally.—T. J. L., Ohio.

Buy Land Today

Along the Union Pacific System Lines there are many large and small tracts suitable for stock raising, farming, dairying or fruit raising. In good communities, close to markets, near the railroad.

Your money put in this land today will in a short time, pay you big dividends. Write to me for complete authentic information. It is free for the asking.

R. A. SMITH,
Colonization and Industrial Agt.,
Union Pacific Railroad Co.
Room 1779 Union Pacific Bldg.
OMAHA, NEB.

***Now* is the time**

to make a trip to Texas and see just where *your* opportunity lies.

The price of good, rich land in Texas is so low that you can own a big farm there without investing much money or mortgaging the place. The land will raise as big or bigger crops than you are now raising, and you will get better prices for what you raise.

Ask your local agent to sell you a ticket via the Katy—or tell me where you want to go and I'll plan your trip, and give you full information about the *low homeseeker's excursion fares* on the first and third Tuesdays of each month.

I will also send you our free books on Texas opportunities if you want them. Write today.

LAND AND OTHER PROPERTY FOR JACKS AND JENNETS.

Or for sale; 102 acres good land in Chariton County, Mo., splendid residence in best part of Chillicothe, Mo.; five passenger Overland automobile in good condition. Also several head of good registered Percheron mares, bred to imported stallion. Address,

D. B. KIRBY, Grain Valley Mo., or
LOUIS H. GOULD, Greenville, Texas.

Make Money With Poultry

AMERICAN POULTRY is a magazine devoted entirely to helping earnest men and women make a financial success of poultry raising. Its staff of writers is composed entirely of those who have made a practical, instead of theoretical, success of poultry farming, and who are glad to pass on the results of their hard earned experience to AMERICAN POULTRY readers.

There are many pit-falls in the path of the novice which may be entirely avoided by those who will follow the teachings set forth in this magazine. It fully explains how to make a start, how to construct houses, coops, and other devices, how to get a large egg yield, how to cure and prevent disease, how to exhibit, how to get the top price for eggs, how to use incubators and hundreds of other points which everyone wishes to know. It explains the famous secret system through which poultrymen have become rich and afterwards sold for hundreds of dollars.

AMERICAN POULTRY is a large, handsomely illustrated, monthly journal, well printed on fine paper, and should be found on file in the home of every poultry lover. No beginner in the poultry business should think of being without it. It will save him many times the small subscription price. The advanced poultryman will also find it of great value; the articles being varied in their scope.

SPECIAL OFFER. The regular price of AMERICAN POULTRY is 50c per year, but in order to introduce it to several thousand new readers, we will, for a short time, give a 200-page poultry book, which is a complete guide in the poultry business, ABSOLUTELY free to everyone sending 50c for a yearly subscription, or $1.00 for a three year subscription to AMERICAN POULTRY. A trial six months' subscription (without book) will be sent for 25c. Never has so much been offered for so small a sum. Advantage of this offer should be taken at once.

AMERICAN POULTRY
SAVOY BLDG., WILKESBARRE, PA.

FROM AN INTERESTING NEW COUNTRY.

To the American Breeder: I will try and write a little from this part of the world. First I will give you some idea as to where we are located. We are on the west slope of the Black Hills, 32 miles north of New Castle, Wyo., and 20 miles south of Sundance on the main road between both places, on the telephone line, and mail route two times a week. We are in a farming country and a good stock country. Land is cheap, from $7.00 to $20 an acre; well fenced and with springs.

I have been in this country only one year and two or three months. I brought nine head of registered Percheron mares and stallions here and some Duroc Jersey hogs, and have done well with both kinds of stock. I have two stallions left, one two years old and one three years old; good ones. I have five full blood mares and one mare colt and two grade mares and one gelding and one mare colt grade; 26 head of hogs of which I expect to sell 20 head that will bring $350. I have sold $180 worth in the last year, beside, out of the nine head I brought here. I could tell you just what I fed and the cost of feed.

I will tell you something of the climate. We are more than pleased with it. We are natives of Iowa and Nebraska, from southwestern Iowa and northwest of Omaha 200 miles. We don't have the extreme hot weather in the summer and no wind like in Nebraska or Iowa. Of course we have wind once in a while but not very often. Winter is cold but we did not notice it like we did back home, as we call it. Snow gets good depths. There is stock that runs all winter without any feed, but mine don't. I am told that there are people south of New Castle that have from 150 to 300 head of horses and they don't feed in the winter, only once in many years. I am going out and see that country pretty soon. I expect to homestead if I can get what suits me there, and if any of our readers want to know about that part ask me through the American Breeder, and I will try and tell you all I can about it. This country needs Eastern people with a little means to build it up.—T. N. Ayers, Crook County, Wyo.

ANSWERS THE MONTANA BREEDER.

To The American Breeder:—In reply to the Montana man in regard to what kind of a stallion to use on his 800 to 1,000-pound range mares, would say, use a 1,550 or 1,600-pound Percheron; one with fine carriage, good style and action, with a good, tough hoof, clean limbs and a smooth hock. A horse with good spreading ribs, short back and good strong loin; deep shoulder and wide on the breast; shoulders shaped right for action; well cut up under the throttle; prominent eye; full forehead; good disposition; an easy keeper; good looker and a sure breeder and a great colt producer. I can inform our Montana friend that he can sell all of the colts raised from such a stallion. Should he keep some of the mare colts for breeding, the next stallion I would have a Percheron weighing about 1,750 pounds of the same type, and the third stallion weighing about 1,950 pounds of the same type and the fourth stallion about 2,100 pounds of the same type. That would make the fourth cross 15-16th. The Percheron stallions are the product of the Arabian stallions crossed on French mares. The Western horses are the descendants of the thoroughbred Arabians imported by De Soto in the Sixteenth Century, and that is why the native Western mare produces the best results from Percheron stallion. Both sire and dam possess the Arabian blood. The Arabian blood infused into the veins of any breed of horses gives them more vitality and greater endurance.

I have a thoroughbred Arabian stallion named Sultan. He came from some of the World's Fair horses that were imported in 1893. Twenty horses came to this country and seventeen were returned. One of those returned was a fine gray and the owner refused $7,000 for him. Sultan is also a gray and an excellent breeder. I will some time have his picture for the American Breeder.—R. I. Little, Linn County, Iowa.

QUESTIONS AND ANSWERS

(Continued from Page 5)

average breeding jack supposed to get in foal? Do they get a less per cent than draft horses? Should a jack have more exercise than he would take himself when turned in paddock?—Indiana Subscriber.

REPLY—We do not know the average per cent of jacks. Some breeders are getting 80 to 90 per cent of the mares in foal while others are only getting 20 to 30 with practically the same conditions. There is only one way to increase the per cent of foals and that is with a better knowledge of the breeding subject. If the semen is tested at every service and found to contain live spermatozoa, the mares are to blame. They are, however, a few mares (perhaps one in 100) that will not hybridize when bred to a jack. A jack is occasionally a better server than a stallion. The discharge will be discharged in the uterus a little more often from a jack than from a stallion, which is an advantage for the jack. There is very little difference in the per cent of foals from a jack and a stallion. The great difference in results, when live spermatozoa are discharged, is in the mares. Those who are capable of correctly diagnosing the condition of mares are the successful breeders today. This one particular feature has more to do with the per cent of foals than anything else. Some jacks take plenty of exercise in a large enclosure; others should be exercised. A rye pasture where the forage is very short at this time of the year will frequently cause a jack to take sufficient exercise.

600 — DOCKING HORSES — Will the fact that a mare has a docked tail affect her colts?—Florida Subscriber.

REPLY—No.

601—BONE—I have a five and a half month old colt; weighs 725; is fat; in ordinary flesh would weigh about 675. He was judged as having too light a bone below the hock. He has a nine inch bone smallest place below hock. I want to know if he has bone enough for that size colt.—Iowa Subscriber.

REPLY—Ordinarily we would say that this colt had a fair measurement, but if a colt in the same ring was equally as good and had a better foundation, your colt would be judged as having too light bone.

602—YOUNG JACKS' SERVICES—How many mares can a two and a half year old jack breed and not hurt him? Or should he cover any at this age? If so, how far apart should they be between services?—Missouri Subscriber.

REPLY—Ten or 15 services might be satisfactory; no two services closer than one week. This does not mean mares, as some mares require several services. If you would adopt the capsule system and breed every Saturday, a large number could be accommodated, which would include the rebreeding. No one can afford to injure these young sires.

603—SMALL STALLIONS—Will the small size of a horse affect his usefulness as a stallion provided he is sound in every respect, and well bred?—Florida Subscriber.

REPLY—A stallion cannot be expected to transmit a quality with regularity that he himself does not possess. Undersized sires are not very profitable. Practically every breeder of live stock is demanding a large animal, consistent with quality.

604—MORGAN HORSES—Is there any registration for small horses such as army horses? If so, please publish their address.—Kansas Subscriber.

REPLY—Write to T. E. Boyce, secretary of the American Morgan Registry Association, Middlebury, Vt.

605—SUSPECTED TUMOR—I am writing you in regard to a filly I bought last March. She was imported from Belgium in the spring. She had a little discharge from her nose when I bought her which lasted some time and then stopped running; then she breathed hard like her head was stopped up. I took her to the veterinarian at Iola, Kas. He says it is a tumor. He could not get it and said it would have to be taken out through the throat, and advised me to take the mare to Manhattan. Now this mare is with foal. Would it be advisable to operate on her now? She bled badly when he put the instrument up into her head and has been better since. Is there anything to apply on the outside that will do any good?—Kansas Subscriber.

REPLY—If your animal is not seriouusly distressed in breathing we would advise that you defer any surgical operation until after foaling, inasmuch as the restraint and operation might provoke abortion. In the event you elect to send the mare to Manhattan we believe you will find

PICTURED BLANKET $2.25.
Order by Mail.

HALL'S HUMMER STABLE BLANKETS

THESE have heavy brown duck body and are full lined, 3 1-2 inch heavy surcingle—with bound front snap fastenings. Two specials are:

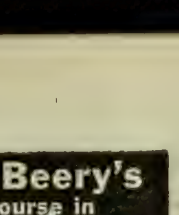
CLEAR-EYE
FOR HORSES' EYES



The most scientific remedy ever discovered for all diseases of horses' eyes. It has cured thousands of cases, many of which were old, bad cases that other remedies and treatments had failed to cure.

It is the guaranteed remedy for Ophthalmia, Moonblindness, Conjunctivitis, effects of Pink-eye, etc., etc.

Let us tell you all about it, and many useful things in most compact veterinary booklet you ever saw, called "Forty Facts For Horse Owners."

The Lakeside Remedy Co.,
5410 Calumet Ave., Chicago, Ill.

Don't Cut Out
A SHOE BOIL, CAPPED HOCK OR BURSITIS
FOR
ABSORBINE
TRADE MARK REG.U.S.PAT. OFF.

will remove them and leave no blemishes. Reduces any puff or swelling. **Does not blister** or remove the hair, and horse can be worked. $2 a bottle delivered. **Book 6 K free.**

ABSORBINE, JR., the antiseptic Liniment for mankind. For Boils, Bruises, Old Sores, Swellings, Varicose Veins, Varicosities. Allays Pain. Price $1 and $2 a bottle at druggists or delivered. Will tell more if you write.
W. F. YOUNG, P. D. F., 388 Temple St., Springfield, Mass.

Don't Have a Blind One
"VISIO"
A Remedy for Moon Blindness
(Opthalmia), Cataract and Conjunctivits
Shying horses all suffer from diseased eyes.

"VISIO" will convince any horse owner that it is the best remedy for defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our money back GUARANTEE.
$2.00 per bottle, postpaid on receipt of price.

there qualified veterinarians who will render you the very best of diagnosis as well as surgical service.

606—CARE OF BREEDING ANIMALS—I have 20 head of brood mares (from 600 to 2,100 pounds) and young stock running out every day since it froze up, in a large pasture; no grass but a large stack of wheat straw for shelter in windy weather. They are out for exercise and not to eat. They are fed some hay, oat straw and threshed oats (about 12 pounds per day of oats) to mature horses and to the young stock in proportion to their size. Instead of running around and taking exercise they stand around the wheat straw and eat all the time they are out. They are not taking enough exercise, as their legs show that they are filling and itchy. They are getting ting plenty of hay and oat straw in the stable night and morning. Shall I burn the wheat straw and so make them move around or feel cold or leave it alone? I keep them in more in the day time.—Canada Subscriber.

REPLY—We have a notion that the shelter of that straw stack will be mightily appreciated by your stock before the winter is over in your northern country. You state that there is no grass in your pasture so you can not expect animals to run about just for the pleasure of exercising alone. Were you to burn the straw as suggested, it no doubt would not improve things, as they very likely would collect in the most sheltered place and remain there. The stack offers shelter and some food, which latter should be to your profit. We do not believe the slight stocking of the limbs complained of will result seriously.

607—PERHAPS CANCER—We have a large, 8-year-old jack that has always been in good health but is losing his voice. We noticed it about a month ago, and as it is getting worse we made an examination a few days ago and found a deep inflamed red growth on the pallet of his throat, just a little forward of the throat latch; looks to be three-quarters of an inch thick. Can you tell us what it is and can there be anything done with it? He eats well but his breathing appears to be a little hard. Is it apt to keep getting larger and shut off his wind? It is on the upper part of his throat extending down. Our veterinarian has never seen anything like it.—Missouri Subscriber.

REPLY—Growths of the character described are usually malignant in nature and if such proves to be the kind affecting your animal it will eventually terminate in his death. It is quite impossible to successfully remove these growths completely on account of the parts involved being so deeply placed that they are quite inaccessible. A microscopic examination of a section of the growth by one competent to make it, is the only way to reach a positive diagnosis of the case at this time.

608—LOCO—What effect does the loco weed have on horses? And how can you tell when they are affected?—Iowa Subscriber.

REPLY—Loco affects the brain of horses, making them nervous, flighty and crazy. The cases are diagnosed largely by the known presence of the weed in a locality and particularly if several animals are more or less affected that have an opportunity to graze upon ground where the weed grows.

609—INJURED STIFLE—I have a 6 months' old colt which was hurt in the stifle joint someway about two months ago. The cap over the joint seems to be loose from its place; can be moved about and the entire joint is considerably swollen. Had a veterinarian look at it and he said the tendons which hold the cap in place are torn loose and advised keeping the colt quiet and applying frequent blister, which we have done twice, and applied liniment also. Was blistered with cerate of cantharides. If the joint is injured, as it seems to be, can anything be done? And is it possible to expect recovery?—California Subscriber.

REPLY—It would seem that your veterinarian is giving you good advice and service and we have nothing to add. You must remember that severe injuries of this nature require considerable time to effect recovery and that the age of your colt is in its favor, as young things incline to grow out of these mishaps better than older stock.

610—ENLARGED BURSA—I have a 2-year-old gelding that had a lump or swelling come on the fore part of hind leg at ankle. It has been there about six months. It is quite soft and can be moved from side to side with the hand. Will you tell me how to treat this lump?—Idaho Subscriber.

REPLY—It is quite likely that bursa beneath the anterior tendon of the limbs has been injured in some manner and the inflammation resulting has caused its distention. It is doubtful if the difficulty can be treated successfully with such agents as would be safe in your hands. You may try painting it twice daily with tincture of iodine until the skin has become quite sore, and then discontinue the treatment for a few days, after which repeat applications. These enlargements are best treated by a skilled veterinarian who would perhaps withdraw the fluid from the bursa and inject the same with some agent with a view of preventing its collecting again.

611 — UMBILICAL HERNIA — My neighbor has a colt 6 months old that has a small rupture at the navel. Will you kindly inform me what is best to do?—Idaho Subscriber.

REPLY—The most satisfactory way to treat a case of umbilical hernia of six months' standing is to have it operated on by a well qualified veterinary surgeon. We would suggest that this case be treated at an early date for the reason that it is more difficult to effect a cure in older animals.

SAFEST, OLDEST, BEST

We are the Largest Buyers and Users of pure Wormseed in the United States

Notice the Class of Men who Use and Endorse It

(A new endorsement for every ad; We get hundreds of them)

"For twenty years I have fed nearly all the leading brands of Stock Condition Powders, but as an appetizer, worm destroyer, flesh producer, none compare with Lion's. Considering results, it is by far the cheapest Powder I have used. It is thoroughly reliable. Have also used Lion's Imported Dip, as well as six or seven leading brands Domestic Dips, but find Lion's makes smoother, stronger, more uniform emulsion than any other. It is the only Dip that neither age nor weather conditions will effect. Never knew it to crystallize. So impressed am I with results that I want to arrange for the Agency of St. Louis County."

Jack Sores Cured

By Using Jack Sorine. Sold With a Cash Guarantee.

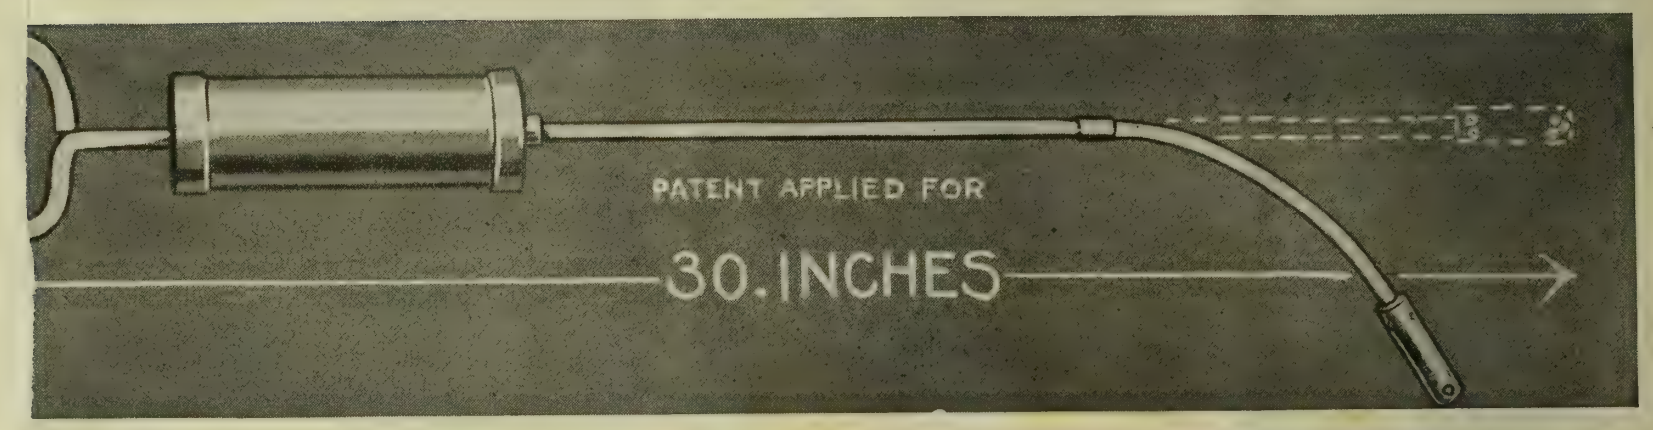
O. P. WILSON SERUM CO., Kansas City, Mo.

Enclosed find my check for $5 for a package of your "Jacksorine" for sores. This is for a neighbor and shows on its face that your salve is d my old jack's leg some good.
June 5, 1913. W. H. HAYS, Bloomfield, Ky.

We guarantee Jack Sorine to cure any sore on the legs of a jack or stallion, no matter how long it has been sore or what caused it. You know we have a good, reliable remedy or we could not guarantee it to cure all sores on the legs of stallions and jacks, without any restrictions. It is put up in a substantial box and sent promptly by mail. It is a paste and applied with a small brush.

Send money by bank draft or P. O. money order. Price $5.00.

O. P. Wilson & Co., 3754 Wayne Avenue, Kansas City, Mo



FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat.

A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.

Made and sold by **A. W. FRAVEL, Ph. G.V.S.** Centralia, Mo.

Breeding Appliances of all Kinds

THE IMPROVED CARLSON SEMEN EXTRACTOR AND CAPSULE SYRINGE

This extractor has been improved so that it is much easier to use. The proper temperature can easily be maintained. Any- should have good results with this instrument by following the directions carefully. This is the only instrument made has been successfully used for getting the semen from the uterus. We believe this instrument with its improvements will it possible for any ordinary breeder to use the capsule system successfully. It has a soft metallic point that will stand ng a thousand times. All necessary directions will be sent with the instrument.

$5.00 IS THE SPECIAL PRICE ON EXTRACTOR TILL MARCH 1st, 1914

Pointed Breeding Capsules

have the only capsules made especially for breeding Some capsules do not dissolve, g a foreign substance in the uterus which will ent conception. Other capsules are too flimsy se for this purpose. You cannot make any mis- by buying capsules from us as we only have kind. We have them boxed with 100 in each The box is tight so they will be clean. These les are properly baked and all bacteria killed e they are mailed. Always keep the lid on the when not in use.

Price per box (100), $1.50.

Bulb Impregnator

This is the best bulb impregnator on the market. me dealers sell for $5 and $6.

Price $3.00.

Veterinary Thermometers

This thermometer is recognized and used by the leading veterinarians for taking the temperature of animals. It has a metal case which insures it against breaking and will last a life-time. It has a small chain with pin in it that may be fastened to the vest pocket and carried with safety.

Price, $1.25.

Thermometer

Tested and used for keeping water at the right temperature.

Price, $1.00.

Breeding Hobbles

We have heretofore handled breeding hobbles made by reputable firms, but we have received so many complaints that we are now manufacturing our own hobbles. They can be adjusted to fit a small pony or the largest draft mare. We believe these are the only hobbles made large enough for draft mares. Most hobbles are made to fit the common race mare.

Price $8.00.

Emasculator

This emasculator (improved style) is made by the Kny Scheerer Co., and bears their trade mark. It is guaranteed to give satisfaction. If it breaks within one year or gets out of order, return it and get a new one. This instrument is made of the very best steel. It is the latest method, only having three pieces and can be taken apart very easily and thoroughly sterilized. It operates perfectly. Price, $7.00.

Microscopes

For use in testing the semen of stallions or jacks. Magnifies 500 times and is used by veterinarians and physicians. Price $35.00. Boxed in fine case. These instruments are of great value in the breeding business. Through them you can see for yourself and show your mare owner the live spermatozoa of your sire.

Curved Metal Impregnator

This instrument is sold by other dealers for from $5 to $6. It is nickel plated, about 22 inches long, with a glass tube in it.

Price, $4.00.

Breeders' Bags

Three sizes, small, medium and large. Stallions weighing 1,200 or 1,600 pounds usually require a medium size. These bags are guaranteed not to tear from any cause before March 1, 1914. If they do tear before that time return the top part with our stamp on it and 35 cents in cash and we will send you a new bag.

Price each, $1.00.

Directions for Ordering

Send money orders or draft as exchange is always charged on personal checks. Always name your express office as well as your post office address in order to insure prompt delivery.

POSTAGE AND EXPRESS PAID ON ALL ORDERS.

THE AMERICAN BREEDER

A Farmers' Paper, Devoted to the Breeding and Care of Their Live Stock, and the Welfare of Their Families and Homes.

Published Twice a Month. Subscription Price, $1.00 Per Year, or $2.00 for Three Years, Payable in Advance.

Volume VI. *Kansas City, Mis[illegible]ecember 20, 1913* *Number 23*

Studies in Percheron Conformation Through the American Breeder Camera.

Graham Publishing Company, Inc., 225 West Twelfth St., Kansas City, Missou

DON'T ADVERTISE IN THE AMERICAN BREEDER

Unless You Think It A Good Business Proposition

If in Doubt on That Point Read What These Advertisers Say of Their Experience.

"We have known the American Breeder since its first publication and during parts of the last three years have been using the columns in advertising our business, and the results have been very satisfactory. We believe it reaches a good, sober class of readers. It is with pleasure that we tell you we are satisfied with our advertising with you. We wish you continued success."—Taylor & Jones, Sangamon County, Ill.

To the American Breeder: Your paper reaches the buyers.—L. Donaldson, Lincoln County, Mo.

To the American Breeder: I read your paper with interest and have told many of the better farmers around here that I think every farmer should subscribe for this paper, and by giving copies some have subscribed for it. This not only helps them but also helps me in that it helps educate the mare owners and gives greater publicity to any advertisements I might have in the paper, and for your encouragement will say that we have received more inquiries for money spent advertising in your paper than we had any idea of. I sincerely wish you success in your work and will be glad to distribute any papers or send names to you of any one I think would be advantageous to the cause.—F. M. Lorimer, Johnson County, Kas.

To the American Breeder: Sold everything I have advertised in the American Breeder.—Wyatt Carr, Story County, Iowa.

To the American Breeder: We fully realize that the American Breeder is the best paper published for the practical horseman. We are satisfied with the results obtained through its columns and can recommend it to any one who is dealing with registered stock.—George W. [illegible]ers & Sons, Huntington County, Ind.

[illegible]e American Breeder—My last year's ad[illegible] of my big boned black jacks and jen[illegible]ught me lots of inquiries.—J. H. Smith, [illegible]er County, Okla.

[illegible]e American Breeder: The American [illegible] is a long felt want to the farmer and [illegible]iser. As an advertising medium it is [illegible]o none. I got letters from all quar[illegible]he globe from the highest class farm[illegible] breeders.—Enos Hayes, Hamilton Coun[illegible]

[illegible] American Breeder: I am well pleased [illegible] advertisement in the American Breed[illegible]ve had definite results. How any stal[illegible]n can be without the American Breeder, [illegible]ending the breeding school, is some[illegible]hat I can't understand. I have had [illegible]ul success in breeding barren mares [illegible]tending the Scientific Breeding School. [illegible] Rodecker, Los Angeles County, Cal.

[illegible]e American Breeder: We have found [illegible]rican Breeder the best and most profit[illegible]vertising medium that we have ever [illegible]nd we have tried quite a number of [illegible]of various kinds. You not only reach [illegible] number of people but you reach the [illegible]hat are interested in buying and sell[illegible]llions and jacks, and since that is our [illegible]r, you are the best paper for us in that [illegible] We are also very certain that your [illegible]ontains more valuable information to [illegible]e owners and the raisers of all kinds [illegible]k than all the other papers of our [illegible]ge. People are becoming more inter[illegible] registered sires here all the time, and [illegible]his has been a poor crop year we ex[illegible]sell more saddle stallions and jacks [illegible]er. Wishing the American Breeder the [illegible] it deserves.—Kentucky Sales Stables, [illegible]n County, Ark.

[illegible]e American Breeder: For quick re[illegible]e American Breeder beats them all. [illegible]n ad in it to sell my two stallions. I [illegible] answers from the ad before I ever [illegible] paper the ad was in. Got letters from [illegible] several different states. Long live the American Breeder.—J. Hallmark, Daviess County, Ky.

To the American Breeder: Please discontinue my ad and send me the bill. I want to thank you for results obtained by placing the ad in the Breeder.—D. B. Kirby, Jackson County, Mo.

To the American Breeder: I have been well pleased with results of my advertising with you, and expect to use your paper again when I need further service.—Chas. A. Galt, Linn County, Kas.

To the American Breeder: Find check enclosed for advertising. The results were good. Your ad was a great help. Herman H. Koth, Clayton County, Iowa.

To the American Breeder: I had good success advertising my black Hambletonian stallion. Received a great many letters and made a good sale. I think your paper is O. K. and would recommend it to any one wanting to advertise stock for sale or exchange.—John Scherer, Richland County, Ill.

To the American Breeder: Two dollars and eighty cents worth of advertising sold my Percheron stallion. I am more than pleased with results.—Beecher Rayl, Tipton County, Ind.

To the American Breeder: We have always been satisfied with the American Breeder as an advertising medium for our high class Shires, Percherons, Belgian and Suffolk stallions, and congratulate you on the stand you have always taken for the upbuilding of high class horses.—J. G. Truman, McDonough County, Ill.

To the American Breeder: I have always found my advertising in the American Breeder

Remember that the prices and quality of advertised stock are more sure to be right than any others, for advertised animals are sold faster, sold more direct and sold in more open competition than any others, and the seller's printed advertisement in an honorable publication obligates him to those who answer the same. Always mention the American Breeder when writing an advertiser.

to pay better than in any other paper, and the expense is always less.—E. R. Smith, Jefferson County, Iowa.

To the American Breeder: Results realized from advertising with you in the past have been very satisfactory to me. I consider it money well spent.—C. W. Lamer, Saline County, Kansas.

To the American Breeder: For a jack seller we consider your paper about worth all the rest. We have sold jacks all over the country through your paper. We expect to take a good ad again with you as soon as the jack season opens up.—Bradley Bros., Johnson County, Missouri.

To the American Breeder: I have been a breeder and seller of jacks for over 30 years; have sold as high as 137 a year at home by advertising. I consider your paper a high class medium for advertising. It has sold lots of stock for me and I still use it and think it one of the very best I use out of a large number. I also enjoy reading your paper as it has a great deal of valuable information for farmers and breeders of live stock.—S. W. Jetton & Co., Rutherford County, Kentucky.

To the American Breeder: I consider your paper the best advertising medium I have ever used in my 24 years' experience in the horse and jack business. It always brings results.—J. E. Bradley, Jasper County, Missouri.

To the American Breeder: The past season's advertising with your paper was quite satisfactory. I believe the American Breeder to be one of the best advertising mediums in the West, and shall continue to use it in the future.—W. H. Bayless & Co., Linn County, Kansas.

To the American Breeder: I have used your paper for advertising with the very best results, as it reaches the up-to-date farmer and stock producer. It shows me it pays to advertise from the amount of correspondence I received from my ads in your valuable paper. Wishing the paper success in every way.—E. P. Chapman, Adams County, Iowa.

To the American Breeder: Stallion ads in your paper bring more letters than I can answer.—A. C. Boyd, Will County, Illinois.

To the American Breeder: I am well pleased with the advertising I did in the American Breeder during the past four years. I consider it a good paper for the breeder and stock grower. I have been greatly benefited by reading it since I subscribed four years ago. I also recommend the Graham Scientific Breeding School. I have found it to be all O. K.—J. E. Lewis, DeKalb County, Missouri.

To the American Breeder: The ad I put in the American Breeder brought me plenty of inquiries and sold my jack.—Dr. D. H. Bibens, Pawnee County, Kansas.

To the American Breeder: Last spring my ad in your paper brought me several letters of inquiry about my jacks. Sold one jack, a quick cash deal when the stock was seen, and for want of more money I had to turn down too low a cash offer for another good jack. I think the American Breeder a good paper to advertise in, and as I still have some good jack stock for sale, I may run another ad in the near future.—A. C. Briggs, Harrison County, Iowa.

To the American Breeder: The American Breeder is one of the best stock papers published. No one can make any mistake to advertise in it. Have done a good business through my ad in the past season.—W. A. DeMerritt, Will County, Illinois.

To the American Breeder: I sold my horse soon after placing ad in your paper. Had inquiries from about 40 or 50 persons.—Earl J. Gossard, Tipton County, Indiana.

To the American Breeder: I have been advertising with you for several years and believe your journal reaches as many jack men as any journal published.—G. M. Scott, Andrew County, Missouri.

To the American Breeder: We have received many inquiries from our ad in your paper which we have been running regularly for several years.—Cook & Brown, Fayette County, Kentucky.

To the American Breeder: I like the American Breeder as an advertising medium better than any paper I have ever advertised in. I have sold more horses through your paper than through four or five other papers combined.—H. A. Greenwell, Shelby County, Missouri.

To the American Breeder: We were well pleased with the results we have had from our advertising in the American Breeder. We have advertised in your paper for three years; have tried several others, but the American Breeder beats them all.—T. E. Collins & Son, Republic County, Kansas.

To the American Breeder: We consider the cost of advertising in the American Breeder as money very well spent. We have always received definite results.—Wright Bros., Henry County, Iowa.

To the American Breeder: I will say that I have read the American Breeder ever since it started under the name of the Stallion and Jack News. I have also carried several ads in it at different times and have had good results from them. I have been in the stallion and jack business for 30 years and the American Breeder is one of the best papers of its kind I ever read. I always keep the best of stock and hope 1914 will be a prosperous year for all breeders of pure bred stock of all kinds.—Adam Matz, White County, Illinois.

To the American Breeder: The American Breeder is one of the best papers I run ads in. I got as many or more inquiries than from any other paper.—Ed Boen, Ray County, Missouri.

To the American Breeder: Please stop my ad and send me your bill, as I have answers enough to dispose of any number of jacks.—G. Fred Skank, Mills County, Iowa.

To the American Breeder: I received a good many inquiries to our ad in your paper.—H. A. Wehrmann, Lewis County, Missouri.

Rates for small ads (one time and one month) always printed on editorial page. For longer time or larger space send for rate card, addressing

PERCHERON SOCIETY AFFAIRS

What Happened at the Annual Meeting in Chicago—Some Comment on Record Association Affairs in General—Bright Outlook for the Percheron Business.

For several years considerable interest has been manifested among Percheron breeders as to the outcome of the annual elections in the Percheron Society of America. The interest seems to be increasing. A larger number of breeders seem to be attending these meetings. It is evidence of a healthy interest when members attend such meetings. We should like to see every record association have a large attendance at its annual meetings, because there are always important and interesting things to be discussed. A breeder should attend such gatherings and be familiar with existing conditions. Proxies and farm paper reports do not always give satisfactory service and information.

The annual election of the Percheron Society of America was held at the Congress Hotel, Chicago, Ill., on Monday, December 1st. The meeting was called to order and the different reports given. I. D. Graham who has been editor of the Kansas Farmer for the past ten years, was present in his new capacity as Assistant Chief of Live Stock of the Panama-Pacific Expostion. His suggestions concerning the co-operation which the Percheron Society could give (both in special premiums and in the maintenance of a "View Stud" during the exposition) were well received. August Tacheau, one of the leading Percheron breeders of France, addressed the meeting concerning Percherons.

When the election of officers was announced several nominating speeches were made, some of which caused great excitement. A man from Minnesota during his speech placing in nomination U. L. Burdick, for director, seemed to make some of his remarks very plain, and the attorney employed by the Percheron Society arose to a point of order and stated that, in his opinion, the Minnesota speaker was out of order. The president sustained the point but the Minnesota gentleman said that he had started to place a man in nomination and was going to finish, and if there were any who felt capable of throwing him out, to proceed at once. He was not thrown out. The crowd seemed to be with the Minnesota man. He made his speech and placed his man in nomination, although the attorney for the directors made numerous attempts to stop him.

During the discussion there was as much excitement as has ever been experienced at a record association meeting in any country. In order to fairly describe what happened we will call the two sides taking part in the discussion, which preceded election of directors, the "Progressives" and the "Stand-patters." The speaker from Minnesota represented the Progressives and it was evident from the start that he and his associates were there for business. The Progressives easily had a majority in attendance, but perhaps not enough proxies to carry the entire election. By massing their votes they could have elected one director without any question had such a plan been necessary. There were four places to fill, and as soon as four candidates were nominated it was moved that the nominations be closed and the four candidates be elected by acclamation. This carried; it was indeed a satisfactory way to avoid a "rough house." Those elected included two of the old directors, W. S. Dunham of Wayne, Ill., and John De Lancey of Northfield, Minn. Lieutenant Governor U. L. Burdick of Wiilliston, North Dakota, also elected, was the candidate of the Progressive element. Mr. Burdick's friends and acquaintances state that he is a good, clean man with plenty of character and ability to protect the best interests of the Percheron breeders. Professor C. F. Curtiss of Ames, Iowa, was elected for a director from that state to take the place of H. G. McMillan. Some breeders believe this will be an improvement.

After the election of directors, Mr. Burdick asked the president what power was vested in the Board of Directors. A. P. Nave, the president, referred the question to their attorney, who stated that everything was vested in the Board of Directors; that the members of the Percheron Society of America had only one privilege in such a meeting and that was in the election of the Board of Directors. He further stated that the members of the Percheron Society of America had no right to make suggestions to the Board of Directors at that meeting. This brought on the hottest discussion. A lot of prominent breeders made speeches on that subject, which should go down in history. They were not of the "white wash" nature, either. A number of men who had always held that the accused should have the benefit of the doubt are now convinced that they should have used their efforts long ago in removing two officers.

During the discussion, after the directors had been elected, an attempt was made to adjourn the meeting, but this attempt was a failure. The breeders did not leave, they continued to talk and visit until a late hour. It was evident, from the spirit and substance of the remarks that night that "gag rule" was at an end. Breeders expressed themselves as to the future, by saying that hereafter they would be on hands at the annual meetings. It was also evident that the days of a self perpetuating ring of office holders are at an end.

Senator White of Leesburg, Va., was elected president. This is a case of the right man going into the right place. Mr. White was the progressive candidate two years ago when he was elected a director. W. S. Corsa of White Hall, Ill., was elected vice-president. He also is a Progressive and will serve the Society well in case of absence of the president. These are men of the kind that the Percheron breeders want. We believe that even those who upheld McMillan through fear are glad that they do not have to fight his battles longer. C. M. Jones of Plain City, Ohio, was elected treasurer. His term ends next year.

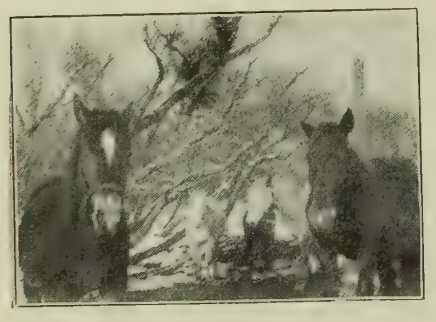
This was the most satisfactory election the Percheron Society has held in years. The new officers have shown that they are willing to give the breeders a reasonable opportunity to be heard in the meetings. We look for great improvement in the affairs of the Percheron Society of America, and of all breeders of Percherons. Care must be taken to protect the interests of all honorable members, but at the same time there are breeders who might be a little careless, yet perfectly honest, who would suffer if the regulations were too exacting. All regulating must be done carefully, but the Society should investigate all irregularities promptly and treat all breeders with justice. We believe there are not many who will care to take the chances of disgrace by attempting to register animals fraudulently. Examples have been set for those interested, not only in Percheron horses, but in all other live stock breeds, and honest men in every line have had some benefit.

Now that the Percheron Society is in the hands of a majority in which the Percheron breeders have confidence, let us all work for the advancement of this Association. Thanks to a better educated demand, and the consequent elevation of the standard, registered Percheron horses are higher in price than they have ever been. The few breeders who practiced fraudulent registration are being driven out of business and their stock is disappearing from the records because everybody is afraid of it. Already the per cent of animals which trace to fraudulent registrations is so small that it ought not seriously to interfere with the Percheron horse in America. The most important service which Percheron breeders now can render their breed is to work for the development of better individuals through the use of better sires and sufficient care and feed. If an irregularity should ever arise, brand the crook and brand him quick, and brand the publication that stands up for him and profits by his advertising. Do not wait until it is a deep-seated corruption. If every honest Percheron breeder will do his duty there will never be any necessity for another "house cleaning." Percheron breeders should be thankful that the records on both sides of the water have been improved and give promise of becoming as strict as any live stock records in existence.

The great demand for really good Percheron horses should increase year after year. With a little more feed, better selection of sires and the proper development, the owner of every pure bred Percheron mare should be realizing a nice profit.

In the matter of registrations, the Percheron Society, we are told, has a peculiar new problem to contend with. For years this Association has refused to register home-bred Percherons for Robert Burgess of Wenona, Ill. Circulars were sent out to members of the Percheron Society of America and to newspapers concerning their refusal of these horses. Now the Burgess Stock Farm has been incorporated and we understand that an attempt will be made by this incorporation to register home-bred horses. It would seem to us that the Percheron Society of America should be able to settle this controversy for all time to come. If any breeder wishes to know anything about the reputation of Robert Burgess of Wenona, Ill., he should inquire of some of the older breeders and importers and ask the papers that carry his advertising if they vouch for the reliability of his representations.

Mare Owner Editions A General Benefit.



To the American Breeder: Sending your "mare owner editions" to my customers has been a good advertisement for me. It is a good thing for the mare owners, too, as they learn about breeding subjects what they can not learn from any other breeders' paper published. It makes regular subscribers of part of them, and if all mare owners read every copy of the American Breeder they would keep learning things they did not know before. It has helped me educate a great many farmers to having more mares bred with capsules, therefore fewer natural services for the stallions and jacks, keeping them surer, and sireing more and better colts. As I have been breeding with capsules for years have colts all over this country got that way. Am among the first graduates of the Scientific Breeding School. Have shown my patrons that scientific horse breeding is a success, and the mare owners editions have helped me do it. Will send them to as many this year as I have heretofore. The sooner mare owners and stallion and jack owners learn better than to breed diseased mares by natural service, carrying disease to the next mares bred, the better off the country will be.—D. H. Adcock, Alexis, Warren County, Ill.

PUTTING GROWTH ON THE COLTS.

To the American Breeder:—In this western country where the grain crop is so uncertain it is often quite a problem to provide suitable feed for the colts the first winter when they need the most careful attention. This fall we are feeding our colts about two pounds each per day of bran and cotton seed meal, equal parts by measure They have the run of the pasture by day and at night are tied in the barn with a good feed of the best prairie hay the ranch has. When the weather is unfit for them to be in the pasture, they will be fed bright, clean alfalfa in limited quantities. They are doing fine and did not guant at all when taken from the mares.

Cotten seed meal and cake are being fed very extensively in this country this fall, and with gratifying results to nearly every user. I enclose the picture of a nine months old grade Percheron colt weighing about 800 pounds taken in a winter scene on our ranch.

We have used the capsule system

At Nine Months, 800 Pounds

to such good purpose that three of our customers asked to have all their mares bred with capsules.—C. M. Jennison, Lane County, Kansas.

THE WAY I CARE FOR MY STALLION.

To the American Breeder:—I have a small paddock with 8x14 stall in northeast corner; door opens to the south. Paddock built with eight foot post every eight feet, two 2x6 stringers, one about a foot from the ground and the other three feet above; then I took 1x6, 12 ft. long sawed in three pieces and nailed on inside of stringers, four inches apart. That makes it about five feet from the ground to top of boards. Then I put three strands of barb wire above that about five inches apart. It has given complete satisfaction. I have had one of the most firey and high-strung stallions I ever saw, in it all summer and he has never made any attempt to get out.

During the breeding season I feed about a quart and a half of soaked corn and oats each three times a day; alfalfa hay, straw and kafir corn fodder. The alfalfa hay was limited to about ten pounds per day. Straw in the manger all the time and what fodder he would clean up. When the season was over I gradually changed until I am now feeding a quart and a half of ground wheat twice a day, prairie hay, some kafir fodder, no heads, and some baled kafir hay and straw. Our kafir fodder was damaged by the wet weather, and hay was damaged by drouth, so you see he is not getting anything good, but the ground wheat. He is in prime condition, feels fine and is never still only when eating. I keep a half bushel measure in stall to keep water in. I fill it up with fresh water three times and sometimes more per day. He drinks from 10 to 18 gallons a day. I never shut the stable door.

This horse measures 10¾ inches front shin; 11¾ hind shin, smallest place; 7 feet girth and 7 feet 6 inch flank. He was five years old last May.—A. M. Eubank, Woods County, Okla.

Questions and Answers.

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problms of on reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

612—SWELLING ON MARE—I have a fine black mare that I had broke for riding a short time ago. One day about a week abo she was ridden about 50 miles and since then she began to swell up under her belly and between her front legs. She seems to have a good appetite. I feed her wild hay and corn; am feeding her some Pratt's stock food. What can I do for this mare?—Nebraska Subscriber.

REPLY—Your letter is too indefinite to permit of a satisfactory diagnosis. It is possible the swelling was induced by the trip, but we would search carefully for a bruise or injury to the parts. Hydrothorax as well as purpura hemorrhagica are diseases that give rise to swellings of this nature.

613—DISEASED MARE—There was a mare brought to my place this fall for breeding. She has been bred during the season this summer, but did not catch. Before breeding I examined the mare and found her to be open, and found the vagina full of a thick, sticky substance. This mare is seven years old. Is she in a right condition to breed or is she diseased?—Colorado Subscriber.

REPLY—Your mare is not in a condition to breed. Use the iodine treatment on her twice about three weeks apart, beginning now. The fluid should be used at 115 degrees. About the first of April make an examination with the speculum. If the cervix shows to be healthy and in a normal condition, breed her. If she does not settle use the litmus paper for the acid test.

614—ECZEMA—My mule in the spring breaks out with watery blisters on her front legs; size of a match head, and whenever they appear there is no hair around them. They appear on the neck and ears but none on her back and only a few on her sides. It's so painful that it is impossible to curry her. After warm weather they disappear. I have had veterinarians, but they can't do anything for her and don't seem to know what it is. They itch her so she wants to roll all the time. If you can give me any information will greatly appreciate it.—South Dakota Subscriber.

REPLY—It appears as though your mule was affected with a form of eczema that recurs when favorable conditions offer and you will find it a very obstinate skin affection. Inasmuch as you have access to veterinarians you will no doubt make better progress than could be expected from us inasmuch as we have no opportunity of making a personal examination.

615—STALLION FAILS TO SETTLE MARES—I bred seven grade draft mares to my grade Percheron stud in 1911 and got five good colts, but did not work the horse. Next year I worked the horse, but did not get any colts. This year no colts. Fed horse same way each year. In July I thought they had leucorrhoea (whites) so injected in them for 15 days peroxide of hydrogen two ounces, water four ounces, a small amount each day, then waited a few days then irritated them with iodine preparation once and in a week irrigated them with the salt solution. Then I bred them again. I doubt them being with foal. They do not have that discharge now. Would it be safe to irrigate them with the iodine treatment now or wait until spring? The horse has not averaged over three or four covers a week since I owned him.—Texas Subscriber.

REPLY—Test your stallion with a microscope. He is evidently the one to blame in this case unless your mares have had a serious disease. One of those five mares with colts by their side should have settled if this horse was performing his part of the work. If you had used a microscope with this horse every few days each spring, you might have been several hundred dollars ahead. Working of the stallion should not make any serious difference if the stallion is worked moderately and fed regularly. Occasionally a stallion when allowed to get exceedingly hot will not discharge live spermatozoa for a great length of time and is sometimes ruined permanently. Do not use any more peroxide of hydrogen in the uterus of any female, as it is dangerous. If your mares are diseased it would be well to irrigate them with the iodine treatment now as it will require several months for them to get in breeding condition after such treatment. The first thing necessary in your case is to have the stallion tested with the microscope.

616—INJURED BULL—I have a registered Durham bull that got cut on wire about three months ago. It is cut just below the hock on the small part of the leg. There was about four inches of the bone showing until recently. I have been using the Dr. Le Gear's healing powder, also pine tar The place still looks bad; it hasn't healed over yet and his leg is still large. Can you give me a remedy that will make it heal over and the hair come back?—New Mexico Subscriber.

REPLY—Such an extensive injury should receive the personal attention of a competent veterinarian, inasmuch as it quite likely needs some surgical attention at this time. It is only by careful attention you will be able to reduce this limb to anything like normal proportions again.

617—LAME JACK—I have a big jack that has been ailing for the last two years. Last spring the veterinarians thought he was growing a new hoof and had rheumatism. He got so bad that he could hardly get up. Then he got better so I could use him a little through the season. He is acting the same way again. He acts stiff in his limbs; he stands stretched out with his feet forward; he keeps drawing up one foot and then the other—his front feet the most. Where he stands he scratches the ground with his front feet until he makes a hole and his flesh seems to be so shaky at times as if he was weak.—Kansas Subscriber.

REPLY—It may be that your animal has rheumatism as they are very subject to this disease, but the position the animal assumes causes to be suspicious of laminitis. It may be that this jack's feet have become so dry that they have contracted and are pinching the sensitive structures of the feet. Try soaking his front feet in hot water for an hour at a time three times a day and in the interval apply large hot flax seed meal poultices. Keep this up for a week or ten days and if you note improvement, continue longer. The feet should be trimmed to proper proportions.

618 — INFECTIOUS ABORTION — Please give some information on mares throwing or losing their colts at the present time. They are out in the pasture most of the time. Feed hay and oats moderately. Salted once a week. Have had two cases so far. After they drop their colts they have a bad smell.—Minnesota Subscriber .

REPLY—It is about the time of year when complaints of this kind begin to reach our office, and as a matter of safety a person should regard all cases of abortion as an infectious disease. Mares that have aborted should not be permitted to mingle with pregnant mares or in any way come into their presence. Again all foul or contaminated bedding or premises should be cleaned up by means of

(Continued on page 15).

SCIENTIFIC BREEDING SCHOOL.

There are hundreds of breeders who would like to double their income without increasing the investment, but many of these same men hesitate to leave home for a few days. Frequently a breeder will prepare to attend the breeding school, which can show him how to do this, but when the time comes some little thing will interfere with his leaving home.

There is only one way to attend to this necessary work and that is to make your arrangements and then be on hand at the next term. During the winter months there are plenty of neighbors who could be employed very cheaply to feed the stock. Instructions can be given to feed regularly by exact measurements. In case the feed is not all consumed in the feed box, a meal might be missed until the feed is gone. Quite frequently it is a good plan to let an animal skip a grain feed. There is very little danger of sickness when the stomach is practically free from grain feed. If the breeder was afraid that an animal might get sick, he could instruct the attendant to feed only half grain ration during his absence.

This should not be an obstacle to a breeder's leaving home when necessary for his own good. If there was no other valuable information to be obtained at the Scientific Breeding School, the meeting of a large number of the most progressive, clean, up-to-date horse breeders in the country for an entire week, and being in their company all the time, would be worth the time and expense. The experience meetings are valuable. Practically every hour of the day from 7:30 in the morning until 10:30 at night is utilized to a good advantage with the particular subjects which every breeder should thoroughly understand.

The next term of school which begins Monday morning January 5, and lasts one week (with day and night sessions consisting of illustrated lectures and demonstrations) should be well attended. Breeders are requested to reach Kansas City the evening before the school starts so they can have a good night's sleep and rest. Inquire for the Convention Hotel at Twelfth and Broadway. Representatives of the school will be there to meet them. Special rates have been secured at this hotel for all of the students, so that they can be together all of the time.

One tuition fee of $25 for a life membership admits the student to all future terms of the breeding school. This school guarantees to please the student in every respect or the tuition fee will be refunded. The student alone is to be the judge. Any breeder interested in this subject can well afford to spend his time and car fare to investigate this proposition. Those who expect to stay in the breeding business and be numbered among the expert horse breeders should arrange to be on hand at the next term of the school.—Adv.

"BETTER RESULTS THAN FROM ANY OTHER."

To the American Breeder: It gives me much pleasure to say that I get better results from my advertising with you than in any other paper (including the * * * * *) that I use. It is quite a business answering the letters I receive sometimes.—Stanley Turner, Tom Green County, Texas.

"NO PAPER EQUALS IT FOR ADVERTISING."

To the American Breeder: I have been well pleased with results from your paper, and have made many sales of jacks from it. I think there is no paper equal to it to advertise in. —Al. E. Smith, Douglas County, Kans.

Live Stock Market Review

The trade in horses and mules for the first two weeks in December showed fair activity, and there was only a slight price recession. Total volume of business decreased considerably compared with November, but that decrease was not as pronounced as in former years. Some dealers have complained of the dullness in the trade, but they were making unfair comparisons. A year ago in December the weather was rough and Southern and Eastern demand were both at a low ebb. This year Southern demand still exists and considerable broadening is expected in that outlet channel after the first of the year. At several Missouri points in the past ten days a large number of mules have sold to cotton state buyers, at $190 to $210 a head. They were fat and in good condition, being direct from feed barns. The Southern trade is braced by the high value of this year's cotton crop. The east never is a patron of the horse market in December, and only on extraordinary occasions is there any movement east. This season is no exception. Practically no heavy drafters have been offered on any of the markets in the past two weeks, and only inquiry of a local character has been received. January usually develops Eastern trade, though weather conditions are a pronounced factor. Feeders are taking thin horses and mules in limited numbers for finishing, and there are a good many mules on feed at Missouri points. The high price of feed may cause eager January marketing, but unless the market breaks severely supplies will not exceed the demand. Receipts in the past two weeks have been fairly large and the general opinion prevails that the country is cashing in on horses. In a limited way that is true. As far as numbers go December receipts will be large, but only animals of the plainer quality have been marketed, and then only where owners had a surplus. The main movement is not from the farms, but from the cities, where animals that have been used for teaming, and were out of work and eating high priced feed had to be disposed of. This is more noticeable in the coal business than any other commercial line. Usually at this time of the year coal haulers are worked to the limit now they are working less than one-third time. Some big companies still have their barns full of horses waiting a change in weather conditions.

The following quotations are for serviceably sound horses and mules 4 to 7 years old'

Horses—	
Drafters, choice, 1600 lbs up.	$240@285

15½ to 16 hands.....	150@200
16 to 16½ hands.....	185@275

Christmas Trade In Cattle.

In the past two weeks the market has taken a higher range, due in part to a general improvement in quality. The International Live Stock Show in Chicago yielded prime beeves at $9 to $13.35 a hundred pounds, and at the same time the open market was well supplied there with offerings at $9.25 to $9.75. At river markets, the past ten days brought in Christmas steers, and they sold at $8.75 to $10. The supply though limited, was above expectation. Kansas, the state most affected by the recent drought, topped the open market with 1,229 pound steers and heifers mixed at $10, and other yearlings at $9.30 to $9.50. Straight heifers sold as high as $9.50. The heavy steers, however, did not make more than $9. Several bunches weighing 1,600 to 1,886 pounds sold at $9, and the 1,300 pound class made as high as $9.25. Last year in the Christmas trade heavy steers were leaders, but this year owing to mild weather, retail trade has called for light cuts of beef, and consequently the yearling classes have been the best sellers. Outside of the Christ-

The clean, pure, healthful

WRIGLEY'S SPEARMINT

can now be had of most any dealer for **85** cents a box of twenty packages. Get this long-lasting goody that helps digest other goodies. It costs less than a cent a stick by the box!

Be SURE it's Wrigley's

WRIGLEY'S SPEARMINT PEPSIN GUM
THE FLAVOR LASTS
THE FLAVOR LASTS
W. Wrigley Jr. Co. CHICAGO

CAUTION!

The great popularity of *the clean, pure healthful Wrigley's* SPEARMINT is causing unscrupulous persons to wrap rank imitations that are not even real chewing gum so they resemble genuine *WRIGLEY'S*. The better class of stores will not try to fool you with these imitations. They will be offered to you principally by street fakirs, peddlers and the candy departments of some 5 and 10 cent stores. These imitations cost dealers one cent a package or even less and are sold to careless people for almost any price. If you want *Wrigley's* look before you buy. *Get what you pay for.*

We are inserting the above caution solely to protect our customers, who are continually writing us that they have been deceived by imitations which they purchased thinking they were Wrigley's.

THE RIGHT CHRISTMAS SPIRIT.

During the early settlement of Kansas a number of emigrants from the East located on Fall river. Among these was Edwin Tucker, who proved to be a very successful farmer. During one of the dry years he had a lot of corn left over from a better year. This was generally known throughout that section of the country. It was also generally supposed that this corn would be for sale. When buyers would visit his farm for the purpose of purchasing corn, the first question asked was whether they had the cash to pay for the corn, or not. If the buyer had the cash, he would refuse to make the sale, but informed the prospective buyer where corn could be purchased for cash.

Those were trying days for the early settlers. Money was scarce. Only a few of them had established credit at banks where money could be borrowed. A great many settlers knew that they must leave for the East in the very near future unless they could get feed and provisions enough to carry them another year. Their families were usually small and they did not have much live stock. Just before Christmas Mr. Tucker sent word to a large number of those destitute settlers to come to his place for their supplies. Each one was questioned carefully as to the amount of grain and provisions needed so as to make his surplus go as far as possible among his unfortunate friends and neighbors. They were not asked for security, but they were asked to return to him as many bushels or as many dollars as they had secured, at such a time as their circumstances would permit.

This hospitality saved a very large number of homes and kept the settlers on their farms until a later time when crops were more bountiful and prosperity arrived.

This was only one of many pleasant holiday seasons that Edwin Tucker of Eureka, Kans., enjoyed. Hundreds of poor men have been treated in practically the same manner since that early day experience. Mr. Tucker died a few years ago, leaving an army of friends. He enjoyed helping others, and those whom he assisted in time of need, later proved their appreciation in more ways than one. By making his Christmas presents to those in limited circumstances he executed a greater power for good than is possible through the millions of dollars spent at Christmas time, giving presents to those who do not know what need is.

STALLION ORGANIZATIONS.

In the last issue we advocated "Stallion Owners' Organizations." We are again calling attention to this subject as this is the particular time for stallion owners to begin their meetings.

If no move has been made in your section for a breeders' organization, proceed at once to get the names and addresses of as many stallion owners as possible, and write them to meet at your place at a certain day and at a particular hour, for the purpose of organizing a Stallion Owners' Organization.

Any kind of a hall or room that can be kept warm will do for the first meeting. The principal thing is to get the breeders together the first time and elect the officers and get the organization started. Send us the name and address of the secretary as soon as possible. This association should be a county breeders' organization when possible. Thinly settled sections might take in two, three or four counties.

Different sections will have their own problems to contend with, but the principal thing every stallion owner will be interested in is to make the most money with the least amount invested and give value received to his customers. In order to be of the most service in a community, co-operation between the stallion owners and the owners of mares must exist. Where a large number of stallion and jack owners assemble there is liable to be considerable argument against the mare owners. This will not prove profitable, as a rule, in the finish.

More education is needed among the mare owners as well as among the stallion owners. No breeder can expect to have continued good results without giving value received. If there should be a few individuals in an organization who believe they have reached the limit in knowledge, a few questions should be presented to them in a gentlemanly manner so that they will realize something of what there is to learn, and be more interested in the real foundation of horse breeding success—more reliable knowledge of the business. Everything should be done to promote harmony among members of these new organizations and to keep something going on. Selfish motives and actions will not win in the end and should not be tolerated. Great results can be accomplished by even the average county "Stallion Breeders' Organizations."

THE SUBSCRIBERS' NUMBER.

There are mighty few publications which can print in one issue a simple invitation to their subscribers to contribute articles and secure in this way enough good material to come anywhere near making a paper. For the second time now the American Breeder has printed such an invitation and in each case the invitation has been responded to so promptly and liberally that more material was received within the time allowed than could be accommodated.

The issue which just went out, dated December 5, was literally a "Subscribers' Number." Nearly all the articles in it were written by subscribers, and we had on hands after the paper was made up, seven or eight columns of just as good material as that which we were using. Most of this left over material appears in the current issue and speaks for itself as to quality.

So successful have been the Subscribers' Issues of 1912 and 1913, that this will doubtless become a regular annual feature of the American Breeder. We do not, however, wish any one to wait for the Subscribers' Issue. There are always dozens of readers who will have an especial interest in the practical experience or observation of any one, and there is no better way to scatter knowledge and improve conditions and promote good fellowship among the readers of the American Breeder, than by the publication, in every issue, of articles like those in our Subscribers' Number. Many of these came from men who had never written for a paper before.

The "know how" is far more important than experience in writing. Every month has its special problems and subjects of especial interest, and articles on these subjects do the most good if prepared and printed at a time when each question is a live one. That is what we want; timely, short articles that will give information or bring out discussions or start others to thinking. No subscriber should wait until he feels that he has mastered a subject. Tell what you know, and ask questions about what you do not know. That is the way to bring out others and secure the greatest benefit to all. This sort of interest and co-operation (which the American Breeder enjoys more than any other publications we know) can make our columns not only "bureaus of information" but "idea exchanges" and "experiment stations." When you have facts to give or know what information you want, literary style is not necessary. Just write out what is in your mind and send it in.

Where so many thousands of men are continually carrying out investigations there are bound to be new thoughts advanced among them. Other readers will be glad to know of these. Those who are too timid to write for publication are requested to send their information to the editor, who will put the knowledge before the breeding world. We are glad so many breeders are not afraid to express an opinion. If there is any better method than they have advanced they will undoubtedly be glad to hear other breeders tell about it.

We want the American Breeder to be a "clearing house" for the latest and most successful methods. Don't wait for the invitation but write us any time.

EDUCATE YOUR MARE OWNERS.

The average mare owner raises only a few colts. It is a side issue with him. He does not have the time or the encouragement to become thoroughly posted on the subject of horse raising, although the horse stock of the average farm is worth more than all other stock, this subject has been badly neglected among the farmers. Old "fogy" notions have prevailed. Little thought is given to the type of horse which the market demands, to the management of mares, development of colts or to the financial end of horse breeding.

Many mare owners do not know just why they are breeding to a particular horse or whether it really is a good one or bad one, but when they have the opportunity to read about this particular subject in their own home, they do study the subject carefully and improve their own knowledge. No breeder can expect to have a good breeding district without some education among the mare owners.

We are preparing a series of five issues for the special information of mare owners. It is an educational proposition. A lot of special material for these horse growers, including educational photographs will be included in the Mare Owner Editions. For one dollar we will send the five mare owner editions to each member of a club of ten. Each additional subscription will cost 10 cents; 100 subscriptions will cost $10. Breeders owning valuable breeding stock can well afford to send a very large number of these Mare Owner Editions. for they mean permanent education, where it will do a lot of good. Nor are mare owners the only ones with which these issues help; some breeders include all the stallion owners in their section. These names and addresses should be prepared carefully, giving the rural route; written in a plain hand and be sent in as quickly as possible. If they are received at this office soon, they can go out with the regular issue. If they come in late the paper will go out late, so it should be attended to now. All the lists should be in this office by January 5 at the latest.

CAPSULE BREEDING BARN.

We have received several requests from breeders asking for the best plan of a breeding barn where the capsule system is employed. Some breeders do not use a barn for their work, but wait until the weather is warm and use a small shed in which to place the instruments. Those who wish to be the most proficient, where a large number of mares are to be bred at each service, will find it more convenient to have a regular breeding barn where the mares may be placed in convenient stalls so that the services may be made quickly.

We will be glad to have communications from breeders using capsule breeding barns, telling us how they are made and giving drawings if possible.

WAS YOUR COUNTY HEARD FROM?

In the December 5 issue of the American Breeder there appeared over 140 subscribers' communications on various subjects. About that many different counties were "heard from" in an interesting way. Twenty-four

LAST CALL
For the Horse Breeding School
NEXT TERM JANUARY 5 TO 10

Breeders with money invested in the business cannot spend a week's time and their tuition fee to better advantage. Fathers and mothers need not be afraid to send their boys. Ask any graduate.

It's the greatest opportunity offered anywhere to make yourself an expert breeder, to learn to avoid the points of the breeding business that causes so much loss to stallion and jack owners every season. All of the instruction is practical and everything taught is demonstrated whenever possible. All instructors but two are expert post-graduate veterinarians doing educational work recognized by the United States Government.

SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Mares, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse Judging—Mule Judging—Barren Mares—Barren Stallions—Abnormal Conditions—Dieseas of the Foal and Fetus—Diseases of the Male and Female—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Capsules, etc.

EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lectures on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from $1 to $1.25 a day—sufficient to provide quarters for all who come.

Remember the date and prepare to be here next term. When you get here take Observation Park street car at Union Depot; get off at 12th street and walk one block east. **Tuition is $25, which entitles all students to a free return privilege for life.** For other information address

The GRAHAM SCIENTIFIC BREEDING SCHOOL
225 West Twelfth St., Kansas City, Mo.

states, and also Cuba, Canada and Washington, D. C., were represented.

Of these communications three came from Arkansas, four from Florida, three from Idaho, 15 from Iowa, six from Illinois, five from Indiana, 21 from Kansas, three from Kentucky, 12 from Missouri, three from Nebraska, six from Ohio, eight from Oklahoma, four from South Dakota, four from Texas. One or two communications each were received from the following: California, North Dakota, Wyoming, Oregon, Colorado, Wisconsin, Minnesota, Mississippi, Louisiana, New York, Washington, D. C., Canada and Cuba.

About 30 more communications were received than could be printed in that issue, but are in the present issue or will appear soon.

IMPORTATION OF ANIMALS FOR BREEDING PURPOSES.

To the American Breeder: Since 1793 the various tariff acts, with the exception of the act of May 16, 1866, have provided for the entry free of duty, under certain restrictions, of pure-bred animals imported for breeding purposes. This provision is continued by paragraph 397 of the tariff act approved October 3, 1913. Such animals, to be admitted free of duty, must be recorded in a book of record recognized by the Secretary of Agriculture, and the certificates of registry and pedigree are to be submitted to the Agricultural Department. The Secretary of Agriculture is authorized to make such regulations as are deemed essential to determine the purity of breeding and the identity of such animals. In order to carry out these provisions a list of the various books of record which are recognized is published as Order 206 of the Bureau of Animal Industry. This order also gives directions for obtaining the department's certificates of pure breeding, which are required by the customs officials for the entry free of duty of animals imported for breeding purposes.

Paragraph 397 of the tariff act does not require the submission to the collectors of customs of the certificates of the foreign societies but permits the Agricultural Department to return them direct to the importers when the same have served the purpose of that department.

As paragraph 619 of the present tariff act provides for the entry free of duty of cattle, sheep and swine, the collectors of customs will not require the certificates issued by the Department of Agriculture for the free entry of such animals. Consequently the only societies (pedigree associations) recognized at the present time under the provisions of paragraph 397 are those for horses, dogs and cats.—Weekly News Letter, Washington, D. C.

ALL STALLION OWNERS, NOTICE.

To the American Breeder: All stallion licenses issued before July 1, 1913, were cancelled by the last legislature, but under the new law they may be renewed for a fee of $1.00 if application is made before March 1, 1914. If not renewed before March 1, 1914, a new license must be secured and the law provides a fee of $2.00 for each new license issues. Application blanks have been sent to stallion owners. These should be filled out and sworn to and sent to the Live Stock Registry Board, Manhattan, Kans., at once, so that every stallion owner will receive his stallion license before the breeding season opens. There are several thousand licenses to be renewed and if owners wait until nearly March 1 to make application, it will necessarily mean considerabe delay in returning licenses. In making application for renewal or new license for pure-bred stallions, pedigrees or certified copies of pedigrees must accompany such application. Stallion owners should read carefully the instructions on the back of every stallion license.—Live Stock Registry Board, C. W. McCampbell, Secretary, Manhattan, Kans.

HIGHEST PRICED DRAFT STALLION.

The Trumans' Pioneer Stud Farm of Bushnell, Illinois, reports the sale of its grand champion Shire stallion, Lockinge Hengist, to a company headed by George J. Stoll of Chestnut, Illinois, for the long price of $11,500. This is perhaps the highest price ever paid for a draft stallion in America.

Mr. Stoll, a practical and experienced breeder, is a graduate of the Graham Scientific Breeding School. His study and investigations have shown the way to make a high priced stallion profitable, and the result is a purchase which not only puts him in the first rank, but opens the way for many small owners of good Shire mares to raise a class of colts such as they could not hope to own under the old order.

The graduates of this school have purchased many of the highest priced stallions in the country. The knowledge and methods which they employ are making an outlet for the good ones. It is repeatedly being demonstrated, that in the course o fa year, 200 or 300 more mares can be bred to an outstanding stallion than was ever done under its old plan. This is an advantage to the importers and breeders, and especially to the importers, many of whom have hesitated to purchase the highest priced animals in Europe because there were so few in position to pay the necessary prices and make good. The breeders who develop the good sires for sale can now depend on having prospective purchasers for that kind. Hundreds of men are successfully using the modern breeding methods which are bringing about this change. Any one who doubts can easily visit the breeding barns of these men and be thoroughly convinced that one sire can accommodate several hundred mares during the breeding season. It is only a question of time until very nearly all the better sires will stand on this most practical plan. It is a good sign when the leading importers and the larger American breeders recommend scientific methods, as they are now doing.

To the American Breeder: I have had good luck in breeding. I just finished checking up today for the spring run of breeding; 127 natural services and 44 with capsules. I have more with the capsules this year than last. I will have a good fall run this year, with 50 to breed this fall.—Frank A. Dutter, Carroll County, Ia.

Hotel Convention

12th and Broadway, Kansas City

Mo. Large, airy rooms, good beds. Special rates to students of the Graham Scientific Breeding School. Two persons in one full bed, 35c per day each. One person in a full bed, 60c per day. Good restaurants in connection and nearby. Take Observation Park street car from in front of Union Depot direct to our corner. Only a few minutes' walk to the school building.

LIVE STOCK MARKET REVIEW.

(Continued from page 5).

mas line the general market for steers has shown no improvement. Killers say that demand for ordinary beef is dull, and that the trade is well supplied. Receipts have been liberal in lieu of the necessity to settle loans by the first of the year and the general disposition on the part of feeders to get rid of a big feed bill. Trade territory of Chicago into which the bulk of the feeding cattle were shipped from July to November, are cashing in at a rapid rate. West of the Missouri river wheat fields have been most useful, and a liberal number of cattle, are moving to markets, that have been fattened on wheat pasturage and cotton seed products. Oklahoma and Texas are marketing some silage meal-fed steers. Other than strictly prime cattle the general market is on a $7.50 to $8.50 basis, with ordinary kinds selling as low as $6.25 up. As soon as general selling pressure is removed the market is expected to rebound.

Quotations for the various grades of killing steers are as follows:

Prime corn fat steers	$8.50@10.00
Good to choice steers	7.75@ 8.45
Fair to good steers	6.50@ 7.75
Common to fair steers	5.75@ 6.60
Meal fed, choice	7.50@ 8.15
Meal fed, common to fair	6.50@ 7.45

Heifers Up to Nine Fifty.

Some prime handy weight heifers sold as high as $9.50 this week, making the season's record for straight female cattle. In the bunch was less than a full load. This sale shows the extreme of the market. The next highest price was $9, and it was $8.50 down that caught most of the offerings. Several bunches of medium weight heifers direct from wheat fields brought $7 to $7.50. Cows sold at $4.25 to $7.50, dry lot grades reaching the latter price. Veal calves sold mostly at $10 to $11, and bulls $4.75 to $7. All lines of butcher cattle are considered fine. Demand is broad and the supply small for this season of the year. Packers are still anxious for "canner" cows, but the movement of that class is largely from the dairy districts. No range cows of any consequence are coming. The open season thus far has been favorable for breeders in the Southwest and prospects based on present conditions are for a large calf crop next spring.

The following quotations are for the various grades of butcher cattle:

Cows—	
Choice	$6.25@ 7.50
Fair to good	5.50@ 6.20
Common to good	4.85@ 5.45
Canners	4.25@ 4.80
Heifers—	
Choice fed	8.25@ 9.50
Good to choice	7.25@ 8.25
Common	5.25@ 6.25
Plain to fair	6.25@ 7.20
Veal calves	6.50@11.00
Bulls	4.75@ 7.25

Limited Demand for Feeders.

Only a few heavy feeding cattle have gone back to the country in the first two weeks this month. The market offered a large number of good half fat steers that would have shown a feeder's margin had they been taken for a finish. Some 1,060 pound steers sold at $7.75, but most of the 800 to 950 pound thin cattle sold at $6.65 to $7.50. More stockers than feeders sold. Countrymen prefer the light weight cattle that can be carried through the winter on rough feed and grassed next summer. There is a ready demand for stock cows, heifers and calves.

The following quotations are for stock and feeding cattle:

Selected feeders	$ 7.25@ 7.75
Good to choice feeders	6.60@ 7.20
Plain to fair feeders	6.15@ 6.60
Selected stockers	7.00@ 7.50
Good to choice stockers	6.35@ 7.00
Plain to fair stockers	5.65@ 6.30
Stock calves	6.00@ 8.25
Stock cows	4.75@ 6.00
Stock heifers	5.00@ 6.65
Milch cows	50.00@110.00

Big Receipts of Hogs.

If the present movement continues up to the close this month's receipts of hogs at the five Western markets will exceed 1½ million. Last week's receipts were 450,000, and the first full week this month 412,000. Christmas holiday next Thursday will interfere with the movement next week. The country is disposing of hogs rapidly, and the movement is at the expense of future supplies. Weight is deficient and that figures a big loss in product. January is usually a month of big receipts and the opening month next year will be well supplied. February and March will be short, and the shrinkage in supplies will extend well into the summer. Aside from fluctuations prices have shown no important change in the past two weeks. In the West the range held under $7.80 and on two days a top of 8 cents was reached in Chicago, but the market there yesterday was off about 15 cents from the high point. There is a marked preference for heavy hogs. Grades that weigh 240 pounds up, and were discriminated against until late November are now selling at a premium over the lighter weights. Shippers as well as packers want the heavy weight hogs. Hogs that have been fattened on wheat are selling at about the same price as those fattened on corn.

The following quotations are for hogs:

Choice, 250@300 lbs	$7.75@7.70
Choice, 200@245 lbs	7.45@7.67½
Medium weight	7.30@7.65
Light weight	7.20@7.60
Common to fair	5.75@7.25
Stags	6.00@7.65
Boars	4.25@6.25
Bulk of sales	7.40@7.65

The following table shows prices for hogs in Kansas City in the past two weeks:

		Preceding Week.
Mon., Dec. 8.	7.40@7.77½	$7.40@7.77½
Tuesday.	7.35@7.77½	7.30@7.72½
Wednesday.	7.30@7.75	7.30@7.70
Thursday.	7.40@7.75	7.20@7.62½
Friday.	7.40@7.75	7.30@7.65
Saturday.	7.40@7.65	7.30@7.60
Mon., Dec. 15	7.30@7.70	.....
Tues., Dec. 16	7.20@7.70	.....

Advance and Setback in Sheep.

Sheep prices advanced and receded in the past two weeks, and yesterday were about where they were two weeks ago. The entire price movement is covered by about 50 cents. Last week some prime lambs for the Christmas trade sold at $8.50, and on Tuesday the top price was $7.75. The $8.50 price is the extreme high for this season's market. Good to choice lambs are quoted at $7.25 to $7.85, yearlings $6 to $6.75, wethers $5 to $5.40, and ewes $4.35 to $5. Sheep coming now shows some feed, and as the season advances there will be a marked improvement in quality. The Arkansas and San Luis valleys in Colorado have marketed some lambs, but a general movement will not occur from those sections until after the first of the year.

Enrich Yourself

Supplying a Great Demand

The price of beef is steadily rising, due to the shortage of beef cattle. It is no longer profitable to raise cattle on ranges. That was a wasteful method, and with the passing of free pasturage the costs are too great to leave a profit. Yet people need beef and are willing to pay good prices to get it. That is the demand you may profit by supplying.

Search all over this continent and you will find no section in which cattle do as well or can be raised as cheaply as on the plains of northwest Texas. It is the natural home of the steer. Here great herds roamed in the early days. They fed on the luxurious grasses and went to market without grain. Latterly their weights and the owners' profits have been increased by grain-feeding near to the slaughtering market. But that is now too expensive, considering the high price of corn.

It has been found that the steer can be fed and finished here on ensilage and milo and kafir grain. The cost of feeding is reduced — the quality of the meat improved — a better price is secured and once again beef cattle are money-makers.

The territory available for this work is the millions of acres of northwest Texas, where the rainfall is less than twenty inches a year. It is too dry for corn, but milo and kafir thrive under dry-farming methods.

Herefords are graded up to nearly pure blood and they are the most profitable animal to feed. Weanlings can be brought up to 1,400-pound steers in less than three years, and this young beef sells well, saving a year's time, interest and feed.

Hogs thrive on the same feed. This is their climate, too, as there are no diseases in the high, dry air.

Lately it has been found that upward of one million acres of this fertile prairie is underlaid with an inexhaustible supply of pure water, near enough to the surface to be economically pumped and used for irrigation. This water makes the production of tremendous crops of feed easy and certain. With water, 50 bushels of wheat, 100 bushels of oats and 80 bushels of kafir are not unusual yields, and a small acreage of the irrigated land with a larger area of the dry land forms an ideal stock farm. Irrigation here means stock-feed insurance and is a guarantee of your profit.

The opportunity here is described in detail in a new folder just issued by the Santa Fe entitled "The Shallow Water Country of Northwest Texas." I would like every stock-grower in the country to read it as well as our leaflet, "Letters from Farmers." Then, if you are interested in following the matter further, I will be glad to place at your service the faculties of this department to assist you in finding the location best adapted to your needs.

The interest of the Santa Fe in settlers along its lines does not cease with helping them to select a location. We have a corps of agricultural demonstrators, who are employed by the railroad to help settlers to learn as quickly as possible the best crops and methods of handling for any given section. The assistance of these men will be yours without cost, and the enthusiastic letters from settlers already here will show you that their advice means a large increase of profit to those who have taken advantage of it.

Drop me a postal for this "Northwest Texas" folder and leaflet.

2511 Railway Exchange, Chicago.

FOR SALE OR TRADE

Four young Hereford cows and calves and three Hereford bulls, 2 to 4 years old. All registered and in fine condition. Can use youngsters of the draft kind; registered. Fillies preferred.

S. L. OVERHOLSER,
Glenham, South Dakota.

GOOD SHORTHORNS.

Pratical cattle for both beef and milk. Just the kind the farms of the country need, and with breeding and conformation to make show cattle if you want them. I show my breeding stock successfully, but no stock is ever crowded enough to hurt it.

Pleased to show stock, quote prices and answer inquiries at all times.

C. H. White, Burlington, Kas.

GUERNSEY BULL CALVES

for sale at $25 to $35 per head.

Jack stock, Percheron, Standard bred and German Coach stallions always for sale.

O. L. THISLER, Chapman, Kans.

I will give you a pig if you are not satisfied

My big type Poland China boars are sired by Cox's Wonder, by Rude's Giant and out of a Long King sow and by A. Model, grand champion of Iowa, 1912, and others. I sell at farmers' prices. Write me.

B. F. MARMION FARMINGTON, IOWA.

ASSOCIATION SALES AT CHICAGO.

During the International Live Stock Show at Chicago the leading four beef cattle record associations held public sales of breeding stock.

The Shorthorn Association sold 43 head at an average of about $427. The top price of the sale was $1,275, paid for a young cow. Two other females sold at $1,000 each.

The Hereford Association sold 46 head at a $560 average. The top price was $2,200, paid for a yearling bull. Two others, a bull and a heifer, sold above $2,000 each, and still two others sold at better than $1,000 each.

ALFALFA AS A MONEY MAKER

Rich alluvial soil is what is wanted for the successful growing of Alfalfa, the king of forage crops. The Red River Valley has this kind of soil in abundance—nothing better anywhere. We can recommend this land to well-to-day farmers who want something really good. Ample rainfall.

A CROP EVERY YEAR.

Write for free booklets and magazines to the Kansas City Southern Ry., Wm. Nicholson, Immigration Agent, 671 Thayer Building, Kansas City, Mo.

This is the biggest overcoat bargain you ever saw and is positively worth $25.00. This is one of the luckiest purchases we ever made and we expect every man who reads this ad to order.

$30 Beaumont Repeating Army Rifle $2.95

This is a marvelous bargain. A 5-shot, hammerless, repeating army rifle, guaranteed to be in perfect working order; made under government supervision. The most accurate rifle made. Magazine under barre holds five cartridges. Only three movements to load and fire. Equipped with adjustable, long range lift sight; length from butt to muzzle 52 inches; shoots 48 caliber cartridges and can be used as a shotgun. Only a limited quantity of these guns left, so be sure to order today at this ridiculously low price, $2.95.

Send for "Book of A Thousand Bargains," describing hundreds of other wonderful bargains in Government Goods and General Merchandise. Free upon request.

Cal Hirsch & Sons U. S. Dept. 212 St. Louis, Mo.

Always Mention the American Breeder.

The Aberdeen Angus Association sold about 50 head at nearly $275 average. In this sale a yearling bull brought $2,000. Other prices were moderate.

The Galloway Record Association sold 24 head at auction, at about $165 average.

CEMENT WATER TANK.

To the American Breeder:—Possibly some of your readers might be interested in a cement water tank I made a year ago. It is built in a side hill, southern exposure, eight feet long; six feet, six inches wide; two feet, six inches deep; holds 30 barrels; well reinforced with barb wire; made of a rather rich mixture, one to three of sand. The tank is roofed with galvanized iron and covered with about 18 inches of dirt and well banked with dirt on ends, protected from washing by rock. The front has a door with about a one-fourth pitch to be closed down cold nights. By hanging a lighted lantern in the tank closing the lid, I don't believe it would ever get cold enough to freeze. Last winter it did not freeze without the lantern. I might add that the entire cost including labor at 15 cents per hour was $20, $4.00 of this was for covering it.—E. E. Heacock, Coffey Co., Kas.

BELGIAN RECORD ASSOCIATION.

Belgian breeders met Wednesday, December 3, at the International. Reports were given and showed the Association to be in good order. George Crouch of Lafayette, Ind., was elected president; Eli Sprunger of Saginaw, Mich., vice-president; J. D. Connor, Jr., Wabash, Ind., re-elected secretary and treasurer. Directors, A. Latimer Wilson, Creston, Iowa, and Henry Wolf, Wabash, Ind. Executive committee, J. M. Frisinger, Decatur, Ind., and A. B. Holbert, Greeley, Iowa.

James Spear, Stanwood, Ia., has for sale three choice stallions: Imported Sir Joseph, 10 years old; are through with him. A 2-year-old out of Sir Joseph; a very heavy boned colt; best of style and action, and a 3-year-old this fall; a low down, blocky horse. Also a few choice mares.

Bishop Bros. of Towanda, Kas., whose add appears in this paper, are making a specialty of the Percheron stallion business.

C. G. Anderson, Hector, Minn., starts his ad in this issue. He has Percheron stallions and mares for sale. His mares are bred to prize winning stallions. Write him for particulars.

H. A. Wehrmann of Monticello, Mo., has stallions, jacks and jennets for sale. This stock is offered at a bargain, as he is closing out.

Henry Obermann, Friestatt, Mo., wants to sell his herd jack, Sheridan 4828, as he can not use him longer in his herd. He also has jacks and jennets and Poland China hogs for sale. Read the ad.

F. F. Harman of Bynumville, Mo., is advertising a black jack and a bay Hambletonian stallion for sale at a bargain if taken at once. Read the ad.

Bert Fry, Plainfield, Ia., wants to trade a jack for a combination saddle and driving mare or gelding. Write him for particulars.

Dillingham & Dewitt, Blue Springs, Mo., are advertising registered jacks and jennets, from 3 to 5 years old for sale, ready for service.

Louis Schneider, Horton, Mo., has stallions, jacks and jennets for sale or trade for mares, cattle or mules. Look up the ad.

Joseph Rousselle & Son, of Seward, Neb., writes: "No doubt you know that we have some of the best specimens in America. We have bought a colt for our herd header that would weigh now (20 months old) over 1,800 with reasonable fat. We sold two stallions to J. E. Zehn of Flanagan, Ill., one grey Percheron and one roan Belgian; one black Percheron to Mr. Weiley, of Schickley, Neb.; one black Percheron to Ernest Doehling of Staplehurst, Neb., and one sorrel Belgian to Ernest Muller, of Gresham, Neb. We never, at any time, have made as many sales so early as this year. We have many horses in each breed a year old that would weigh from 1,900 to 2,000 pounds if they were fat."

Escar Edwards & Son, of De Soto, Mo., proprietors of the Hillsdale Stock Farm, have 16 head of registered saddle stallions, mares, colts, jacks and jennets at prices from $150 to $1,000.

Nick Wagoner, Menlo, Kans., has three jacks advertised in this issue for sale, two, three and five years old. See the ad.

H. B. Newton, Magnolia, Ark., has a black jack advertised for sale at $500. Will use one good mule or mare.

Thos. P. Watkins, Prospect, Ohio, is advertising an American bred Percheron stallion for sale in this issue. Look up the ad.

D. A. Thomas, Roseville, Ill., is advertising Arabian horses, Jerseys and Durocs for sale in this issue. The ad gives a good description of the stock. Look it up.

S. L. Overholser, Glenham, S. D., has four young Hereford cows and calves and three Hereford bulls for sale, or will trade for registered fillies.

H. A. Alcorn, Adair, Ia., wants a big jack for which he will trade a Standard bred stallion, mare, Shetland ponies or an imported Belgian stallion. Read the ad.

Henry J. Stuhr, Minden, Ia., has an imported Percheron stallion for sale or trade for mares in foal.

S. W. Jetton & Co., Murfreesboro, Tenn., start their regular advertisement in this issue. They have 22 Tennessee jacks, all ages, for sale, and ask our readers to send for catalog of their stock.

Jas. Hildreth, Dighton, Kans., has 160 acres of land for sale or trade. Will take a good Percheron stallion as part pay. He also has a 320-acre homestead for sale cheap or will trade.

W. P. Smith, Apache, Okla., wants to trade a draft stallion for a jack. He will trade either a Percheron or French draft. Look up the ad as it only appears once.

G. F. Martin, Perry, Mo., is advertising a Morgan stallion for sale or trade, also one black jack and four jennetts. He is going out of business and will sell at a bargain.

Chas. E. Baldwin, Ada, Kans., is advertising his Percheron stllion for sale at $1,000. Read his ad.

R. C. McMillan, Hebron, Ind., has Clydesdale stallions, yearlings and up,

TRUMANS'

H. M. STEPHENS, Munden, Kas.

WILCOX STOCK FARM.

We have some extra good young Percheron stallions and mares for sale. They are all blacks and dark greys, with plenty of bone, size and quality. All mares are in foal by a prize winner at Springfield and Chicago in 1912. Can please the most critical buyer at reasonable prices. Write me your wants.

ENOS STEWART, Lexington, Ill. Rte. 3.

Imported Percheron Stallion

For Sale—Black; 12 years old. I have used him four years. Colts to show. Price $450. I will trade for registered fillies or mare.

FRANK BRENT, Smithshire, Ill.

BLACK PERCHERON STALLION FOR SALE at a bargain, on account of my husband's death. Keota Sampeur 49089; 17 hands; 2,000 lbs. in full flesh. For particulars and price address, **MRS. CHAS. HAYER, HOLDEN, MO.**

LA FAYETTE STOCK FARM

Largest Importers in America of Percheron and Belgian Stallions and Mares. Over 200 head on hand. When your locality has a horse from this great farm every one knows he is the right kind. Write us or come and see us.

We are also breeders of pure bred Hampshire Swine.

J. Crouch & Son, Props. La Fayette, Indiana

and mares and fillies for sale, among them the International prize winner, Bruce Meeker.

B. F. Marmion, Farmington, Ia., writes: "A strong demand for sows and gilts should encourage prospective buyers of bred sows to make their purchases early in the season. I have a few good big-type Poland China boars for sale and am breeding a bunch of large, growthy spring gilts to my good, young herd boar, Wonder Jumbo, sired by Nebraska Wonder, a son of Fasenmeyer's noted A Wonder and out of a sow by Jumbo Junior. This boar is fourteen months of age, has a ten-inch bone and weighs 525 pounds. These gilts will soon be ready to ship out and I will be glad to take your order at once. See ad, and write me, kindly mentioning the American Breeder."

Opportunities along the Union Pacific are not excelled for those interested in stock raising. For more information on this subject address R. A. Smith, 1779 Union Pacific Bldg., Omaha, Neb.

Taylor & Jones, Williamsville, Ill., write: "Our new importation of draft stallions will be shipped now in a few days. These will crowd us somewhat for room and in order to dispose of some of these we already have, we are willing to make reduced prices on anything we have in the barns. If you are planning to buy, it will pay you well to come and select what you want and get the advantage of this special price. With each horse goes our written breeding guarantee. Our horses are all doing well and we are glad to say our sales are quite good."

Johnston-Slocum Co., 933 State St., Caro, Mich., make and sell the Indestructible Horse Collars. Thousands of horse owners use these collars, and this is the way they talk about them: I have been using your Adjustable Hameless Collars for four years. I use them doing all my heavy work and never have any sore shoulders.—F. M. Corey, Pleasant Hill, Mo.

C. W. Lamar & Co., of Salina, Kas., hold a public sale of home bred and imported Percheron stallions and mares January 8. Over 40 horses will be sold, of which about half are mares bred to Ilman and Kangarou, respectively champion, 1912, and first prize, 1913, of the American Royal Live Stock Show. The sale will be on the Lamar Stock Farm at Bridgeport, 18 miles south of Salina, and a special Union Pacific train will leave Salina at 8:30 for the sale, returning after the sale is over in the evening. Send at once for catalog, mentioning the American Breeder.

J. C. Robison, of Towanda, Kas., begins with this issue his regular winter advertisement of one of the biggest and best Percheron breeding establishments in the United States.

Oscar Edwards & Sons, of DeSoto, Mo., are offering some values in Jacks and Saddle horses. Here is an old established firm with which it is a pleasure to deal.

Wrigley's Spearmint Chewing Gum is one of the biggest business successes known to the confection business. As usual, it was the superior merit of the article that did it.

The Detroit Gas Engine Works, advertising regularly in this paper, exemplifies exactly what you want in a gasoline engine, or any other machinery, viz: reliability. Conservative

H. A. WEHRMANN, Monticello, Lewis County, Mo.

RAILROAD GIVES PERCHERON MARES AS PRIZES.

To the American Breeder: Among the many ways in which railroads, stock yards and various other commercial organizations have shown their recognition of the need of more live stock on the land, is the practice of the Central of Georgia railway in giving draft mares and pure bred bulls and boars as prizes to boy winners in the various Southern agricultural contests. Last year in both Alabama and Georgia Percheron mares were given to the boys making the highest showing in state contests. In county contests the boys making the highest showing received Berkshire boars. The same plan was followed in 1912. The coming year, 1914, Percheron mares and Berkshire boars will be given as before, and, in addition, a Shorthorn bull will be given in each of the 76 counties of Georgia which the railroad traverses, on condition that there are 25 or more entries in a county contest. In counties where there are 50 or more entries in a county contest, two prizes will be given. The railroad officials have come to the conclusion that good business methods and genuine value in an engine are two of the factors which give them the buyers' confidence and bring them sales.

PERCHERONS EXCLUSIVELY

Stallions 1 to 4 Years Old.

The 2-year-olds averaging close to a ton right now, and all heavy fashioned and well developed.

Fillies and mares up to 4 years, and nearly all safe in foal that are old enough.

Our Stock Is Mostly Imported

But we breed some high class stuff of our own and keep everything under good farm conditions. We want you to see this stock.

BEN BOHLANDER & SON, EL PASO, ILL.

IMPORTED PERCHERON STALLIONS

Each year I select 35 or 40 horses in France, so good and so correct in type, that any one of them will prove a great benefit to the man who buys it.

At the shows of the Southwest circuit, our horses won every championship and every group of five in 1913, as they have done most of the past five years. Our horses are handsome; our contract just and right; our insurance the best. Come and see me.

THREE SHIRE STALLIONS

For Sale—6 to 8 years old; registered; one yearling can be registered.

G. A. TALLMADGE, Madison, S. D.

CORSA'S SALE AVERAGED ABOUT $630.

In his annual sale of Percherons held on December 9, W. S. Corsa, of White Hill, Ill., made an average of nearly $630, the 40 head sold bringing over $25,000. The feature of this sale, as was the case in 1911 and 1912, were the youngsters sired by Carnot and mares in foal to Carnot. Only four or five stallions were sold, and of the 35 or 36 females many were young. The first five were yearling fillies and brought an average of $762. Prices were very uniform, only one animal passing $1,000. Buyers undoubtedly secured good values from start to finish. Nebraska, Iowa, Illinois, Minnesota, South Dakota, Ohio, Indiana, New York and Pennsylvania were represented in the bidding.

TRUMANS' SHIRE MARE SALE, $540.

An average of nearly $540 was Stud Farm at Bushnell, Ill. Buyers December 11 by the Truman Pioneer got excellent values, the highest price paid being $1,000, for the first prize

Pure Bred Shire Stallion

For sale, Tingley's Prince (10699); six years old; weight 1,900 pounds; dark bay, snip; white hind feet. This is a blue ribbon horse and he gets blue ribbon colts. Is a sure foal getter. This is one of the best horses in Iowa. His colts will show what he is. For full details and price write

C. W. SHELDEN, Diagonal, Ia.

Five head of jacks, 3 to 7 years old; 14½ to 1.3 hands; black with white points; good individuals; extra breeders.

FLEEK & WICKER, Grenola, Kans.

SIZER'S SHIRES

Stallions and Mares for Sale.

All ages—the Get of

TATTON CHIEF 8605 (20087)

The sire of more prize winners than any other Shire horse in America.

L.N. and O.B. Sizer, Fisher, Champaign County, Ill.

RECORDED SHIRE STALLION FOR SALE

Seven years old; weighing over a ton; very gentle; proven an 80 per cent foal getter. Must sell on account of his colts. Price $750 if taken soon. Also a stud colt; fillies of all ages and mares in foal. Must sell for cash or bankable note. Will not consider a trade at all.

B. M. Boyer & Sons, Farmington, Iowa

Two Stallions for Sale; also Fillies and Mares.

One Black Percheron 3 years old; one Clydesdale 2 year old, and a bunch of Clydesdale Fillies and two mares 7 and 8 years old. This is all registered stock—some of them from imported stock on both sides. For further information inquire of

John Sparrowhawk Wakefield, Kas.

(Forty Years a Breeder.)

three-year-old filly, Normandy Sweetbrier. At this auction the first announcement was made of the sale of Lockinge Hengist, the International Grand Champion, for $11,500. This great stallion (to which several of the mares in the sale were bred) was bought by a company headed by Geo. J. Stoll of Chestnut, Ill., a successful breeder and graduate of the Graham Scientific Breeding School.

ROBISON'S PERCHERONS AVERAGE $485.

The Percheron sale of A. L. Robison & Sons, Pekin, Ill., averaged about $485. Two imported mares sold for $1,250 and $1,080, and from that prices ranged down to $185 for a stallion colt. Illinois got most of the horses.

GOOD STOCK, SQUARE DEALING, RIGHT METHODS.

To the American Breeder:—Having arrived home in good shape with my Belgians, purchased at Blue Mound, Kas., I want to tell you just what I got, and I must say for honest dealing, Mr. Bayless can not be beat. He is a gentleman in every sense of the word and lives up to his contract. I bought a five year old imported mare in foal to the big sorrel horse; also bought a three year old sorrel stallion. I think the mare one of the best mares I ever saw. I send you a clipping of our paper (Daily American) that you may know what our people think of them. I was on the road five days; came through all right.

I am trying to interest a couple of our boys to go to the Breeding School—January term. Will make up a list next week for your Mare Owners' Editions. I want 100 copies this time. Hope the School will have a large class. If I was closer I would come again, but am going to try and be there once a year. With kind regards, I beg to remain a true friend to the cause—W. F. Dusell, Chippewa County, Minn.

---

3 JACKS FOR SALE

All right every way. One is 5 years, 9-inch bone; 14½ hands; 1,000 pounds; colts to show. One 2-yearlold; 8-inch bone; 13½ hands. One 3 years old; 7½-inch bone; 13½ hands. I have his full sister that weighs over 1,000 pounds. Come and see these jacks. The prices are right.

NICK WAGONER,
Menlo, Kansas.

HILLSDALE STOCK FARM.

16 head of registered stallions, mares, colts, jacks and jennets. The best that grow. Don't write unless you want to buy. Prices from $150 to $1,000.

OSCAR EDWARD & SON, De Sota, Mo.

JACKS.

20 good black jacks and some good jennets; coming 3 to coming 8 years old. Large, heavy boned, broken to mares and prompt servers. Prices reasonable. Come and see me. Barns two miles from town.

Phil Walker, Moline, Elk County, Kas.

WANTED—A BIG JACK.

For which I will trade standard bred stallion, mare, Shetland ponies or an imported Belgian stallion. Jack must be young and not less than 1,050, and right in every way.

H. A. ALCORN, Adair, Iowa.

JACK COLT MEASUREMENTS.

To the American Breeder: I notice often in your valuable paper measurements of jack colts. I don't know if this one will interest any one. I think he is a good one. His grandsire was imported by Shelby Irvine of Madison County, Kentucky; his dam owned by McCord, same county. His sire I owned and he produced more good mules than any jack I have owned. He is perfectly black. Measurements as follows, taken November 10: Foaled April 10, 1913; seven months old, height, 54 inches, hair of hoof to center of shoulders; ears, 30 inches; girth, 49; flank, 50; small bone, 7¼; arm, 16½; hock, 15½; knee, 12½.—A. G. Bush, Ottawa County, Okla.

THE BEST MULE MARES.

To the American Breeder: The best mare to raise the high priced mule, in my judgment, is a Percheron; the better bred the better. I was in Kentucky a few years ago with a mighty good mule judge and we went out to see some show mules that had been shown all over the state, and they were sure good ones. The old man had been telling me that the Thoroughbred mare was the thing to raise show mules, and I asked the owner of the mules what kind of a mare these mules were out of, and he said a Percheron. I hunched the old man and he didn't say anything more about the Thoroughbred.—T. C. Collins, Republic County, Kans.

A PLANT FOR FEEDING 500 MULES.

A big horse feeding barn is being built by A. D. Cottingham on his farm at Grandview, Mo. Grandview is only 14 miles from Kansas City, and Mr. Cottingham can make good use of his facilities there in connection with his business at the Kansas City market. When the barn is completed he expects to have facilities on the farm for feeding 500 mules. The farm is already equipped for handling half that number.

SOLD 50 MULES IN A BUNCH.

Since receiving the letter from T. L. Bradley, of Johnson County, Mo. (which is published in our issue of December 5) another big sale of live stock at Warrensburg, Mo., has been reported. One of the features of this auction was the sale of 50 mules in one bunch. An effort was made to get a $10,000 bid on the lot, but a Georgia buyer finally landed with a bid of $197.50 per head for the 50 mules, or $9,875 for the bunch. The total receipts for all the live stock sold at auction that day were about $40,000.

HEADQUARTERS FOR JACK STOCK

LIMESTONE VALLEY STOCK FARM.

The best trade of North America has for years supplied itself largely with Jacks and Jennets from our herd. The World's Greatest Show Yard Winnings and Public Sales are a part of our record. The same honest values always open to private buyers; the Square Deal for all.

L. M. Monsees & Sons, props., Smithton, Mo.

Mention the American Breeder when answering advertisers.

No More Scalded Shoulders

Don't lose time and money because of sore shoulders. Don't pay out money for Hames and Sweat Pads. Try a pair of indestructible

Hameless Adjustable Metal Horse and Mule Collars

Endorsed by veterinaries and men of high authority. A. F. DeLaune, St. Thomas Plantation, Albemarle, La., writes: "Send me forty steel collars."

Think what that means to the horse owner. Think of the time saved—money saved and suffering saved the mules. Think of the extra work you could do with a collar that insures against galls and sore shoulders. Be humane, progressive and up-to-date and save money by using

Indestructible Collars

and you'll be free from sore shoulder troubles. The metal won't permit the sweat to scald and produce a sore. Being adjustable they fit the neck and bring the draft to correct point. Durable—last a lifetime. The ideal work horse and mule collar. Be sure and test out this great Twentieth Century invention—100,000 in successful use. Good Agents Wanted. Manufactured by

Johnston-Slocum Co., 933 State St., Caro, Michigan

QUESTIONS AND ANSWERS.

(Continued from page 4).

fire and thorough disinfection and the mares that have aborted should be given a course of treatment under the direction of a good veterinarian. Such mares should not be bred until it is known that they are perfectly sound, on account of continuing the disease on the premises.

619—KNUCKLING IN COLT—I have a yearling colt that knuckles on both hind legs. It has been this way since spring. I called a veterinarian right away and he said he could not help her. She feels well, only is gaunt in the flanks. Eats well but is in misery when she walks; it makes a crackling noise at times and at other times it doesn't. The frogs in both hind feet are not growing much, if any, and her hind feet are smaller than they ought to be. This is a valuable colt and would like to know the cause of it and also what to do. I thought that the nerves had to be cut, as I think that is the seat of the trouble. If so, should it be done right away or not, and will it make her useless for ever if it is done?—Iowa Subscriber.

REPLY—This condition is often congenital and the great majority of the cases outgrow the defect without treatment. In your case we would suggest that you call in a good, competent veterinary surgeon with a view of having him sever the posterior tendons of the limbs affected. Such an operation if properly done, nearly always converts a useless animal into one of value.

620—RED ABERDEEN ANGUS CATTLE—Mr. Arbuckle bet me today that there was no such a thing as a red Aberdeen Angus cow, but that they are all black, and agreed to leave it to the American Breeder. Will you kindly settle this for us?—Washington Subscriber.

REPLY—Occasionally a pure bred Aberdeen Angus calf comes "red," as we designate the color in this country. In Volume 20, of the American Aberdeen Angus herd book, for instance, five of the 12,000 animals recorded, are given as red. One is given as dark brown, while white markings are mentioned in the descriptions of 33 others.

621—MANGE—I have some calves and yearlings that have spots about the size of a dollar coming on them. The skin where the spots are is dry and gets rough like seed warts. These spots come in different parts, first one place, then another. Any information you can give me will be greatly appreciated.—South Dakota Subscriber.

REPLY—The condition complained of is very likely one form of mange that makes its appearance among herds of cattle during late seasons when the weather continues warm, and especially if the animals are kept in closer quarters than ordinary open pastures. Apply a paste made up with equal parts of sulphur, lard and kerosene, rubbing it well into the parts affected and repeat every three or four days if the cases seems to require it.

622—ENLARGEMENT—Please tell me what ails my 18 months old colt. It has a lump on upper jaw above first three or four teeth. It is about as large as a turkey egg. Has been on two months and is getting larger. The colt has been on pasture and is in good flesh.—Missouri Subscriber.

REPLY—It will be necessary for you to employ a competent veterinarian to give this animal a thorough examination in order to positively determine the difficulty. Such enlargements usually come from the teeth, the presence of tumors or from astro parosis. We would suggest that the two latter diseases be given close consideration for the reason that the animal is rather young for difficulties to arise from the teeth.

623—BREEDING QUESTION—I have a friend that has a large mare which is bred last spring to a horse and was brought to my jack this past October, well in season, but upon examination there was a strifin or thin tissue that prevented me from opening the mouth of the osuteri or neck of womb, and I when withdrew my hand I found on my fingers a white, jellish looking substance. Please tell me whether this mare was in foal or diseased. She was perfectly willing for the jack to cover her, but I did not let him.—Arkansas Subscriber.

REPLY—The experience you have recited points to the mare being with foal and the fact that she was ready to receive the jack is not evidence that she is not in foal. Your statement, however is too brief to enable us to positively decide the point in question.

624—INJURED LIMB—I have a yearling colt that was hurt on the inside of right front leg, half way between knee and foot over the splint bone. The sore seemed only skin deep, but started to grow proud flesh and kept getting larger. I have used burnt alum and also a salve I got from a doctor who said it would cure it, but it seems to do no good.—Kansas Subscriber.

REPLY—It is quite likely that the bone was injured at the time of the accident which is the cause of the soft structures behaving as they do. You should have your veterinarian carefully look into the matter as it is possible that a foreign body may be present.

625—DOUBTFUL MARES—Is a mare diseased when she has a sticky substance on the walls of the vagina? We had three or four such mares come to our horse this year and we capsuled them so as not to run any risk.—Wyoming Subscriber.

REPLY—We are not able to state whether your mares were diseased or not from the meager description, but we believe you have done right in refusing to let the stallion serve them. You cannot afford to take the chance of transmitting infection to clean, healthy mares. A few bad mares frequently cause great loss to both stallion and mare owners.

626—THRUSH—Will you kindly tell me of a remedy and how to use it, for thrush in a horse's foot.—Nebraska Subscriber.

REPLY—Clean the frog thoroughly daily by scraping and washing out all the crevices and pack the affected part with calomel using a blunt piece of wood to force the calomel to the bottom of the affected parts.

627—THREE YEAR OLD STALLION—I have a good Percheron stallion coming three years old in June. Would like to know how many mares I could let him to this season without future injury.—Ohio Subscriber.

REPLY—From three to five services a week. If growing rapidly three services will be better than five.

SAFEST, OLDEST, BEST

We are the Largest Buyers and Users of pure Wormseed in the United States

Notice the Class of Men who Use and Endorse It

(A new endorsement for every ad; We get hundreds of them)

"For twenty years I have fed nearly all the leading brands of Stock Condition Powders, but as an appetizer, worm destroyer, flesh producer, none compare with Lion's. Considering results it is by far the cheapest Powder I have used. It is thoroughly reliable. Have also used Lion's Imported Dip, as well as six or seven leading brands Domestic Dips, but find Lion's makes smoother, stronger, more uniform emulsion than an other. It is the only Dip that neither age nor weather conditions will effect. Never knew it to crystallize. So impressed am I with results that I want to arrange for the Agency of St. Louis County."

By Using Jack Sorine. Sold With a Cash Guarantee.

O. P. WILSON SERUM CO., Kansas City, Mo.

Enclosed find my check for $5 for a package of your "Jacksorine" for jack sores. This is for a neighbor and shows on its face that your salve is doing my old jack's leg some good.

June 5, 1913. W. H. HAYS, Bloomfield, Ky.

We guarantee Jack Sorine to cure any sore on the legs of a jack or stallion, no matter how long it has been sore or what caused it. You know we have a good, reliable remedy or we could not guarantee it to cure all sores on the legs of stallions and jacks, without any restrictions. It is put up in a substantial box and sent promptly by mail. It is a paste and applied with a small brush.

Send money by bank draft or P. O. money order. Price $5.00.

O. P. Wilson & Co., 3754 Wayne Avenue, Kansas City, Mo.

FRAVEL'S DISTEMPER REMEDY

Guaranteed to Cure and Prevent Colts and Horses in same stable with sick ones from having Distemper, Influenza, Epizootic, Pink eye, Shipping Fever, Catarrhal Fever, Coughs, Colds and all Diseases of the Horse affecting the nose and throat.

A powerful germicide given internally alone will do the work, and that is found in FRAVEL'S DISTEMPER CURE.

Made and sold by **A. W. FRAVEL, Ph. G.V.S.** Centralia, Mo.

CLEAR-EYE FOR HORSES' EYES

The most scientific remedy ever discovered for all diseases of horses' eyes. It has cured thousands of cases, many of which were old, bad cases that other remedies and treatments had failed to cure.

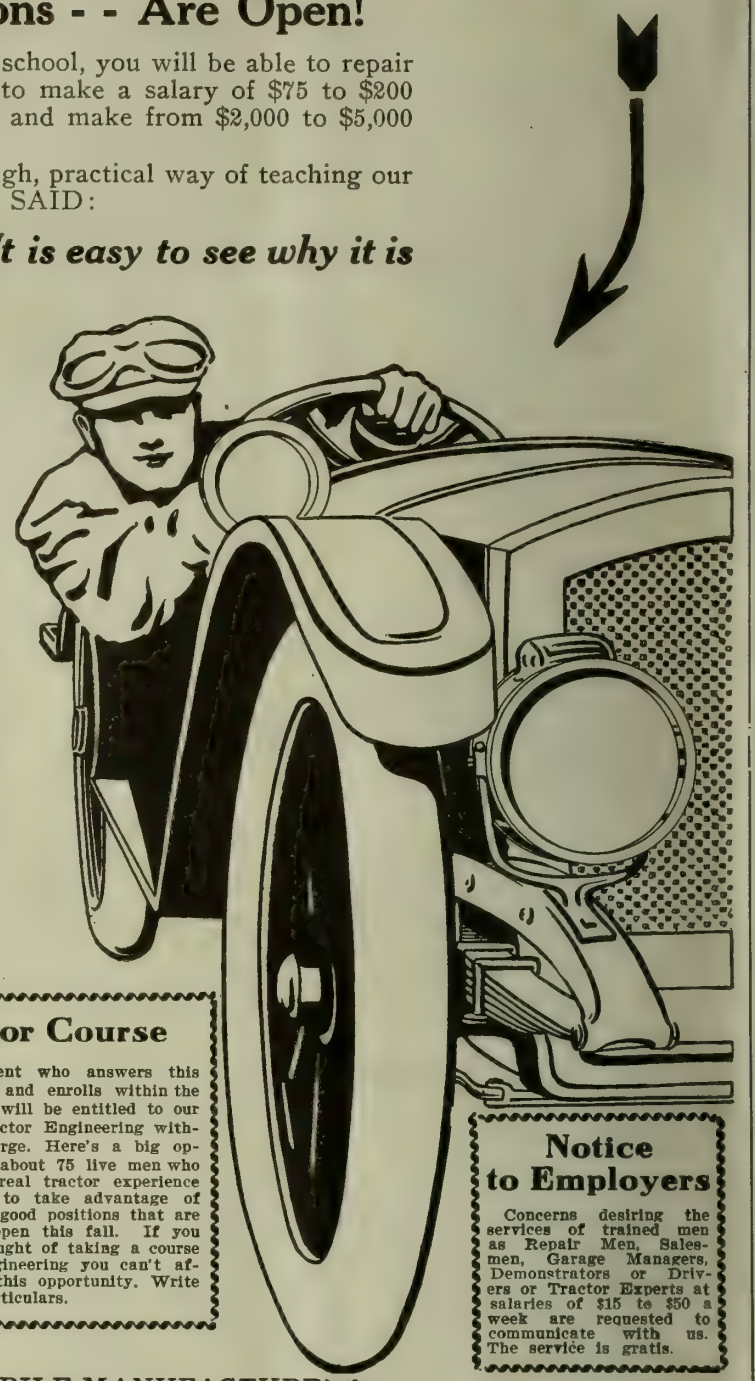
It is the guaranteed remedy for Ophthalmia, Moonblindness, Conjunctivitis, effects of Pink-eye, etc., etc.

Let us tell you all about it, and many useful things in most compact veterinary booklet you ever saw, called "Forty Facts For Horse Owners."

The Lakeside Remedy Co.,
5410 Calumet Ave., Chicago, Ill.

Be an Auto or Tractor Expert

Scores of Positions - - Good Paying Positions - - Are Open!



Six weeks from the day you commence your studies in this great practical school, you will be able to repair any make of automobile and drive any car on the market. Prepare yourself to make a salary of $75 to $200 a month, or go in business for yourself as garage owner or automobile agent and make from $2,000 to $5,000 a year.

After a thorough inspection of our institution, our equipment and our thorough, practical way of teaching our students, THE REPRESENTATIVE OF "THE AMERICAN BREEDER" SAID:

"Mr. Rahe, you have a wonderful institution. It is easy to see why it is that your graduates get the best paying positions."

Every visitor, every student, every graduate says the same. The Automobile Training School is an institution that invites inspection. It is a practical school. We have the best equipped automobile and tractor school in America. Thousands of dollars worth of Automobiles, Tractors, Engines, Magnetos, Chassis, Gears, Lathes—in fact, every kind of automobile equipment and machinery are here and USED daily to instruct our students. Our Garage and Repair Department is one of the largest in Kansas City or the West.

Scores of Automobiles are brought here for repair and adjustment. Our students lay aside their good clothes, don overalls, and under the careful guidance of our officers and members of the faculty, LEARN BY PRACTICAL EXPERIENCE how to repair quickly any make of automobile. This is a kind of instruction that other schools cannot offer. In this great Garage and Repair Department our students are taught the details of garage management, how to buy and sell automobiles, as well as to do Expert Repair Work. It is here they gain that practical experience and expert knowledge that secures for the graduates of this school the highest salaried positions as Auto Salesmen, Demonstrators, Garage Managers, Repair Men and Drivers.

SELF-STARTER COURSE FREE.

There is practically an unlimited demand today for self starter and lighting system experts. Garage managers and automobile agencies need them and are willing to pay good salaries for expert men.

The student who attends an Automobile School today and does not learn the electric and other self-starting systems is a BACK NUMBER and cannot expect to make a success. Next to knowing the construction and operation of the motor, the starter is the most important thing.

Instead of purchasing a USED or second hand system off of some wrecked or used car, we have all of the different systems brand new, complete here NOW ready for your instruction. I believe beyond any question of doubt, that this school has the most complete equipment and the most competent instructors of any school in the U. S.—certainly the best in the West.

We have just purchased a new 1914 Buick with the improved "Delco" starting and lighting system. It is in our school room, and is for the sole use of our students.

We also have the "Deaco" system. The manufacturers deemed this school of such importance that they just sent us this system free of charge. As you know, manufacturers don't make a practice of giving away valuable lighting and starting systems. But the number of students who graduate from this school and the positions they assume in the automobile world makes it important for prominent manufacturers to have their products before them.

Besides the "Delco" and "Deaco," we have the Winton Air Starter and the Chalmers' Special, which in a way is similar to that used by the Winton.

Remember this special course in Self-Starters is FREE to all Class "D" and Class "C" pupils. You can't afford to go to any Auto School that don't have the Starter instructions complete, any more than you can afford to go to one that had only a partial instruction in ignition or motor troubles.

Make no mistake, come to the old established School—the one with the complete equipment and the long list of successful graduates.

Earn $75 to $200 a Month

Automobile Training School graduates are in demand. The letters reproduced below are from the Studebaker Automobile Co., the Winton Motor Car Co., and others regarding the efficiency of our graduates. We will gladly send you letters from our graduates, many of whom formerly earned only day wages, but who now have responsible and good paying positions. Many are in business for themselves and making big money. It is a fact easily proven that the Automobile Training School of Kansas City has many times more graduates holding responsible positions than all other Automobile Schools in the West combined.

Tractor Course

Every student who answers this advertisement and enrolls within the next 60 days will be entitled to our Course of Tractor Engineering without extra charge. Here's a big opportunity for about 75 live men who want to get real tractor experience and be able to take advantage of the scores of good positions that are going to be open this fall. If you have ever thought of taking a course in tractor engineering you can't afford to pass this opportunity. Write today for particulars.

Notice to Employers

Concerns desiring the services of trained men as Repair Men, Salesmen, Garage Managers, Demonstrators or Drivers or Tractor Experts at salaries of $15 to $50 a week are requested to communicate with us. The service is gratis.

READ THESE LETTERS FROM AUTOMOBILE MANUFACTURERS.

THE STUDEBAKER CORPORATION

Kansas City, Mo.

Dear Mr. Rahe: There isn't any question in my mind that your automobile school is the best in the country.

I for one automobile repair man, would not think of having a student who came from any other school.

Yours very truly,
W. R. DEMPSTER.

THE ADMIRAL GARAGE AND REPAIR WORKS
Kansas City, Mo.
Mr. H. J. Rahe, President.
Automobile Training School,
Kansas City, Mo.

My Dear Mr. Rahe: For the past three years nearly all of our mechanics have been graduates of your school. It is a pleasure to state that they handle delicate repair work on magnetos and coil boxes like factory experts. It has often puzzled the writer that such expert knowledge could be drummed in a man's head in such a short time. Wishing you continued success, we remain

ADMIRAL GARAGE,
W. A. Slusher, Mgr.

SCHERRER AUTO REPAIR CO
Automobile Specialists.
Automobile Training School,
Kansas City, Mo.

Gentlemen: The other night at a meeting of the Automobile Repairmen's Association, the members in general discussed the plan whereby they could hire competent Auto Repairmen.

It was then that I learned that nearly every garage repair shop and agency in Kansas City are hiring your students exclusively.

Hereafter when we are in need of competent help we will communicate with you.

THE SCHERRER AUTO REPAIR CO.,
By Chas. J. Scherrer, Mgr.

NO BOOKS USED—NO TOOLS TO BUY.

The Automobile Training School has no pretty picture books, and offers no charts or correspondence courses. These things don't teach you the automobile business so that you can go out and earn a big salary. Our students receive individual, practical instruction under practical conditions on real up-to-date automobiles. The progress of each student is carefully watched by our instructors.

OUR COMPLETE "C" COURSE.

Our complete "C" Course is a Life Scholarship and consists of all practical works and includes eight weeks instruction in Driving, Vulcanizing, Practical Repair Work, Tires and Tire Trouble, Forge Work, Lathe Work, Welding and Assembling, Automobile Salesmanship, Shop Management, Lubrication and Oils, Commercial Trucks, Electric Cars, Gasoline Engines, Garage Management, Automobile Laws, Magnetos and Automobile Advertising.

SPECIAL OFFER TO AMERICAN BREEDER READERS.

I have a special offer to make a limited number of readers who answer this advertisement right away. I am authorized to make you a special low price on our 100 "C" Course which includes a life scholarship and our complete Tractor course without extra charge. Your tuition covers all expenses at the school. We have no extras. GOOD BOARD AND ROOM NEAR THE SCHOOL AT SPECIAL LOW RATES FOR OUR STUDENTS. Here is a chance you may never have again to fit yourself for the fastest growing, best paying industry the world has ever known. Write me TODAY.

Send Coupon Today for Important Information

Write today for our big free catalog. It is interesting and instructive—does not cost you one cent and places you under no obligation whatever. You need it for your own sake, not mine. Breeds and Imports

Percherons, Belgians, Shires.

My November importation is ready for business. My two-year-olds, Percherons and Belgians, are weighing 1,860 to 2,000 lbs.; three-year-olds and over, 1,900 to 2,250 lbs. They are high class and sound. I am making prices that sell. I will pay any man's expense who can say he is disappointed in the size and quality of my horses. 75 head to select from. Write your wants. Send 10 cents in stamps for large picture of the horse parade.

WM. CROWNOVER, Hudson, Iowa.

Robison's Percherons

175 For Sale

Best Collection of *Stallions* and *Mares* ever offered for sale in the West. Come and see me if you mean business.

None Can Undersell Me

J. C. ROBISON, TOWANDA, KAS.

Imported Percherons and Belgians

All horses personally selected direct from the farmers, for good bone and of the best draft type and conformation. All will mature from a ton to 2,300-pound horses. I give a gilt edge guarantee good for two years. I am going to price them down very reasonable. Come and see them and be convinced.

Making Stallions Profitable

Know Your Breeding District Thoroughly. Ways to Interest and Educate Patrons and Prospective Customers. Caution For Use of Cuts in Printed Matter. Exhibiting the Stallion.

A complete census can be made of the breeding mares in any particular breeding district. The limits of the district can usually be extended by proper management. A careful study as to the kind of sires needed and acceptible in such a territory should be made. Conversation with numerous prospective patrons should be had on this subject. A stallion that was a money maker in some other district might be kept at a loss in your particular district.

The average breeder keeps too many sires. Often this surplus consists of inferior stuff that might be castrated with profit. A smaller number of outstanding good individuals, properly handled, is more profitable to stand for public service. For the amount of money and labor involved there has been no better money-making proposition than standing good stallions and jacks, providing the business is carried on in a proper manner. Even though a sire is used with the natural service only, a very good profit can be secured under good management.

The breeding business like any other staple line of endeavor, is not built up in one day or one season. It must be built up by increasing the number of satisfied and satisfactory customers. Those who have tried to maintain a breeding business with deficient breeding stock, have not only met with failure but have placed the entire class of stallion and jack owners in bad light, in some degree. Practically all business future depends on giving value received and a "square deal." Among a large number of patrons there is bound to be a few "slippery" customers, who will be just as unscrupulous as can be found among any other class of men. But the majority of farmers have good business judgment and are a little better morally than the average class of men.

By using his head, the stallion owner can get along nicely with these customers, because he knows them. There are some transients who will slip in occasionally, but the majority of these customers are permanently located.

A closer cooperation between the owner of good sires and his patrons will be an advantage to every stallion and jack owner. It takes time to educate these men but once it is done it is usually permanent. The greater proportion of them want to be shown. Where a stallion is properly handled in every respect he should get a very large per cent of the mares in foal, provided the mares are handled correctly.

There are hundreds of the best stallions in the country that are not working to their full capacity because they are not properly advertised. Too many breeders go on the theory that they have the best horse or the best jack, and that it will be necessary for those interested to patronize this stock without solicitation. This is a serious mistake. The owner of every good stallion should spend considerable time and money interesting a larger number of mare owners to investigate the sire or his colts, and the better the sire the more profitable such expenditure will be. By attending public sales, gatherings in small towns on Saturday, and by a general solicitation, promises from many new customers can be had. This work should be started early.

Talk to the customer until he at least agrees to come to see the horse or investigate his progeny. A frequent mistake made by stallion owners is that after a customer has agreed to use a particular horse, they continue to talk, and very frequently impair the force of that agreement by too much conversation. The right thing at the right time should be said and done. When the breeder secures an agreement, the talk about that particular point should be discontinued. Don't forget to quit talking when the customer agrees to your proposition. Many business men become known as "windy" and what they say loses force. A few well chosen words on a particular subject usually get good results. Study your man. One line of talk will be successful with one individual, but another sort of appeal may be necessary with the next man. It is usually an advantage to let the mare owner have plenty of time to tell his own story concerning the subject; it will enlighten you as to his requirements. The average man is capable of forming his own ideas as to your statements. In case you should state that some other breeder's horse is a failure, a counterfeit or a cripple, he usually takes that as evidence that you are trying to "boost your own game."

A general knowledge as to the essential qualities of breeding stock makes legitimate argument much more effective. The man who owns a successful sire that produces high selling colts has a "talking point" that gets the business. Such a man can introduce new horses to a good advantage. He has shown his customers that he knows what a good sire should be. Those who are capable of seeing the defects in the mares of a district and providing a cross which will correct such defects and result in the production of well formed, healthy colts, also have an advantage.

The mare owners must be reached in some manner before any of these arguments can be produced. A complete list, with correct names and addresses, of all those owing mares in that particular district, should be obtained. This can be accomplished with a little effort. The breeder should have a book in his pocket all the time, so that when he meets a friend he can ask him who has moved on a particular farm. Get his name and address and rural route. Try to find out in advance who is going to occupy a particular farm. After these names and addresses have all been acquired, prepare a good strong, brief statement that will comfortably fill a postal card (set in typewriter type preferably) setting forth the reason that the man you address should come and see this breeding stock. These cards can be printed at any printing office. If typewriter type is used the breeder should sign his name with pen and ink. If other type is used in printing the postal cards, it may not be necessary to sign those. When a card is received that looks as though it had been written on the typewriter, and has a correct signature in ink, it causes the one who received it to read it carefully.

This is direct advertising. A little later another card should be sent out to this entire list with different reading matter on it. Every postal card will go directly to the man wanted.

No misstatements should be made. Everything connected with a successful business must be founded on facts, and value received.

Another good method of advertising is to have a photograph taken of the sire and a good "cut" made from the photograph. The cut will cost about $2.00, if not over ten square inches. Above that size the cost is 15 cents for every square inch if the photograph is good and clear. Thus a cut 4x3 inches would cost $1.80 to $2.30. Your newspaper man can print cards or folders to accommodate this particular cut, or several cuts, and also leave space enough for reading matter.

These cards should also be sent direct to the mare owners. Don't let any one influence you to use any kind of a cut except one made from a natural photograph. Misleading cuts should not be used. By using a correct photograph you will popularize a particular animal so that when he is seen he will be recognized. Out of date stock cuts, such as are frequently found in country newspaper offices, should not be used because new and appropriate ones can be purchased cheaply. A good, clear photograph can be used for making the cut. The animal should be photographed without any confusing back ground. No other object should show in the photograph except the animal wanted, but in case you have a good photograph otherwise, the engravers can correct the background at a slight additional cost. This will help to make the individual stand out plainly in a picture. The animal should stand up correctly with his head elevated so as to show a good, natural pose. The one holding the animal for the photograph should stand out in front so as not to appear in the photograph. The old fashioned cut with the head and tail up, appearing on common posters erected at the cross roads, is not sufficient.

Newspaper advertising in the local papers can be used to advantage, especially if good, natural cuts are used.

Some breeders have found it profitable to take their stallion or jack, especially if it is a new animal, to farm sales and other gatherings where owners of mares might congregate. A stallion or jack may be led or driven. Some have a cart; others drive a mate and have the team bedecked with a handsome set of harness. The stallion should have plenty of grooming so that his hair would lay down nicely; mane and tail straight and his feet should be in a presentable condition. If much road work is to be done in the winter time, he should be shod. He should not be

MARE OWNER EDITIONS

We will send the AMERICAN BREEDER to your customers for five issues for ten cents each, in clubs of ten or more.

We will notify each one by mail from this office that you have paid his subscription.

Where can you spend a few dollars in advertising to better advantage and at the same time educate your mare owner? And educated Customers are the Best Customers.

Those who have used these editions are ordering more of them because they have found it very profitable.

A trial will convince you, Mr. Reader, and next year you will send a larger list. If in doubt, try a club of ten; you will never regret it.

The owner of every good stallion or jack should send in at least ten of his best customers.

Orders will be received at this office until January 16.

Graham Publishing Co.

225 West 12th St., Kansas City, Mo.

paraded to the extent of making him a nuisance, or at a time which will interfere with the sale, or other business for which the people are assembled. The stallion owner needs always to show a proper interest in, and respect for, the other affairs of his customers. It is to his interest also, for them to feel that the animals he offers for service are of good disposition and always under control.

Colt shows are an undoubted and important help in building up trade for good sires, but the conducting of colt shows is in itself subject enough for a complete article and must be left until another time.

HORSE BREEDING CONDITIONS IN IOWA.

To the American Breeder: My opinion as to the kind of mares best suited to raising high priced mules is that they should be lengthy bodied draft mares, not too tall, weighing 1500 to 1700 pounds. My favorite color in mules is dark grey. I have a mare, a regular breeder, that takes the jack or stallion any time. It keeps us guessing sometimes, so we cover her when convenient. She most always foals to first cover.

Iowa has a light colt crop; ever since the craze for big, fat stallions we have had a light per cent of colts. Our mares are largely sired by shy breeding stallions, as were their mothers, and when bred to another stall fed stallion, gets us very few colts. In France (where the per cent of foals is much larger) they work all their stallions, and the mares (generation after generation) were not sired by shy breeders. I know a stallion that made a big season in 1912 that got only three colts; two died at foaling time.

In regard to the stallion law in Iowa, good stallions are getting scarce. A man thinks twice before putting money into a horse that is liable to be worthless in a year or two. The secretary's report showing less grade stallions is very misleading. Farmers are buying good grade stallion colts and working them and breeding their own mares. These colts do not show up on the books but they are doing business all the same. Three times as many mares have been bred to jacks this year as ever before. Farmers figure that a live mule beats a dead colt or no colt at all.—Wyatt Carr, Story County, Iowa.

YOUNG MEN STARTING RIGHT

To the American Breeder:—Am enclosing blank filled out as per your request for stud colts. Will say we are just young farmers and certainly appreciate the effort the American Breeder is trying to accomplish for the small breeder. We are just "boys" but thought that in investing in a pair of good Percheron mares that when we were middle age we would have a nice stud of Percheron horses. Wishing you success and thanking you in advance for what business you can do for us, we are,—Koehler Bros., Clay County, Nebr.

DOING GOOD IN MISSOURI.

To the American Breeder: I have two jacks and one stallion. I have two lots; one grass lot of two and one-half acres. I let them have the grass lot about a half day. I feed sheaf oats and timothy hay, and water twice a day. My stallion is a French draft. I don't see much about that breed of horses in your paper. I am a new beginner at the business. I appreciate the American Breeder.—Andrew Easdale, Shelby County, Mo.

To the American Breeder:—I think the Mare Owner Editions money well spent. The majority of the mare owners do appreciate it.—Louis Knoop, Benton County, Mo.

The Breeder an Improver

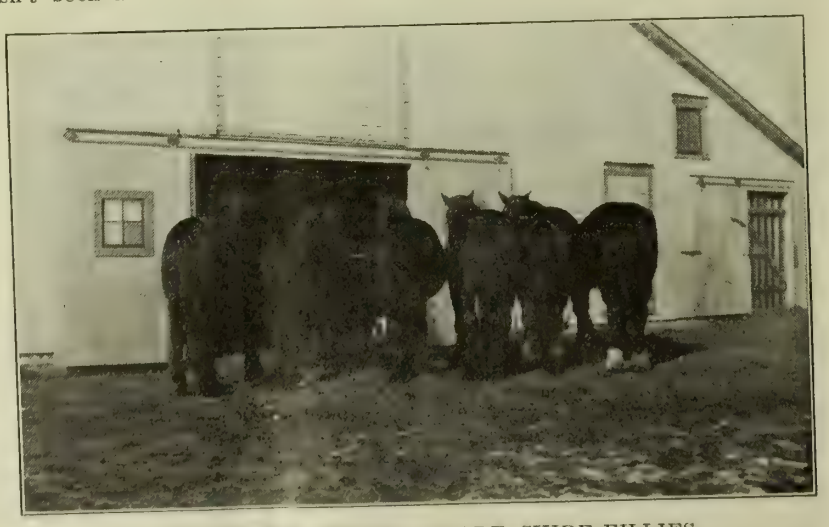
To the American Breeder: The American Breeder hits the spot with me as does no other publication which finds its way to my desk. I read it every word, yes and re-read a great deal of it, ads and all. Every copy I receive is worth 50 cents.

I have loved a good horse ever since I was a small boy, and when I finished my schooling (which was very limited) in a city of Ohio, I was offered a job as a clerk on a steamboat plying in the waters of the Muskingum river. I studied a few minutes and said to myself if I accept this position I cannot own a horse. So I turned it down. Since that day my love for a good horse has never grown less up to this day. Twenty years ago I located here. At

BREEDING PLANT THAT IS A COUNTY ASSET.

that time I had a fine ton stallion. A few years later horses were worth almost nothing. The stallions nearly all left the county. Men who owned good mares would not breed them. I still kept a good Shire stallion and talked horse every chance I could get, until four years ago I shipped in six stallions and one jack from Illinois; all registered; three Percherons and three Shires; built me a large barn and started a breeding business of my own on scientific principles. I invested in a Carlson breeding outfit and studied it very carefully. Some of my patrons objected to it, but I talked to them the best I could to keep peace in the family, and bred a few mares with capsules that would not settle from natural service. I was very successful in settling some which had been bred for several years and had never produced a foal.

Last spring I sold all my stock at auction for what they would bring and then went to Missouri and bought the best breeding jack that ever left the state. He is 15½ hands high and weighs nearly 1300. He gets curried every day and rubbed with an oily rag. There is not a pimple on him and hasn't been all summer. They need not tell me that it does not pay to curry a jack. I am from Missouri and will "have to be shown." With several jacks all around me and no colts to show I have, this season (with the jack and two horses), bred 400 mares at $15 to insure living colt. Out of this number the jack has 170 to his credit. All these were bred at nine services a week. Each sire proved to be very sure.



I enclose picture of barn, also some filies, two years old past, showing what a few crosses of Shire blood will do for a farmer. There is not one in the bunch which will not weigh 1500 pounds before they are three years old.

I am a strong believer in the capsule system and may have more to say later along this line, as there are so many reasons why every breeder should use this system. It is useless to say that I breed at a certain hour. I line them up, pick my mare for the service and breed everything that is to be bred. If any one objects to my way I tell him, in a courteous way, that I am running my business a certain way and if he does not like my method he is at liberty to go where he can have his way.—J. S. Smith, Custer County, Nebr.

FINDS BUYERS; HELPS READERS.

To the American Breeder:—So far I have received 14 answers to my ad in your paper and from seven different states. Your Mare Owner Editions, I think, are a great help to the stallioner. Those who take an interest in the welfare of their horses and are progressive men. I think, study the Editions carefully. There is a per cent that does not care much and will hardly be convinced when shown. I think the money I spent last season for the Mare Owners Editions was amply repaid.

I find that a great many of the mares are overworked and not properly fed, some having no grain but corn, and their systems are always more or less feverish and consequently hard to get in foal. I think the Mare Owner Editions should be a great help to these men, and of special benefit to those men who have diseased mares and mares hard to get in foal, and through these men prove a great help to the stallioner when they may patronize, providing he is up to date with his breeding practices. I hope to attend the next term of the Horse Breeding School, and will see you then if possible.—Hugh M. Cottier, Holt County, Mo.

SOME OF MR. SMITH'S GRADE SHIRE FILLIES.

THE ABDERHALDEN PREGNANCY TEST.

To the American Breeder:—Something over a year ago, Prof. Abderhalden of the University of Halle, Germany, announced his discovery of a new test for pregnancy in animals as well as the human subject. Prof. Abderhalden first worked out the test on animals and then applied it to human subjects. This test has been used rather extensively in human medicine, but scarcely at all in veterinary practice, although it promises to be of great practical value to breeders.

The Abderhalden test is based upon the fact that as soon as placental tissue is formed in pregnant animals, there is also formed in the blood of the animal a peculiar chemical substance of the nature of a ferment. The presence of this ferment in the blood is a positive proof of pregnancy.

In making the test, it is necessary to draw one or two ounces of blood from the jugular vein, collect the clear serum and send it to a laboratory where it is placed in an incubator with prepared placental tissue and certain color reagents. The presence of the ferment gives a well defined color reaction and proves the animal is pregnant.

In the larger animals this ferment is found in the blood about six weeks after conception and remains until two weeks following parturition, when it disappears.

The importance of this test in the sale of pure bred females and in females sent away to be bred will be evident to any breeder.

The test is so accurate that the small fraction of error is generally considered to be due to faulty laboratory technique rather than the fault of the test.—N. S. Mayo, D. V. S., Chicago.

SHIRE HORSE ASSOCIATION.

Shire breeders met December 2, at the International. J. G. Truman of Bushnell, Ill., was re-elected president; Chas. Burgess of Wenona, Ill., was also re-elected as secretary; Harry Hopley of Lewis, Iowa, vice-president; Edwin Hobson of Clifton, Ill., treasurer. Directors, H. W. Wilson, Washington C. H., Ohio; F. E. Huston, Wakee, Iowa; Chas. Coppel, Logansport, Ind.

THEY EDUCATE THE MARE OWNERS.

To the American Breeder:—I have great faith in the Mare Owner Edition. It is the best way to advertise my stock. It educates the mare owner, what kind of stallion to patronize, it teaches them to appreciate well bred stock. The photographs show them why it pays to breed to better stock and it settles all "fogy" breeding problems, in short, it brings the mare owner and stallion owner closer together. I will send you quite a large list.—E. J. Kloeckler, Cotton County, Okla.

A man's growth is proportionate to the amount of extra knowledge that he absorbs over that necessary for his daily work.

Success in Horse Breeding

The average breeder purchases a stallion or a jack and proceeds to make a stand for public service. The knowledge on this subject has been limited. Only during the last few years has there been any substantial investigations carried on. Some of these investigations are technical and cannot be explained on paper so that the average individual can understand them. But by having animals both dead and alive upon which to demonstrate, this new knowledge can be imparted to those who have not had technical training.

With this help and a few explanations given in a plain manner, breeders can get an understanding of a particular disease or condition which the technical language would not convey to the average man. One lecture and the demonstration covering six hours' time, made by one instructor at the Graham Scientific Breeding School, will demonstrate this fact beyond a question of doubt. This particular lecture is the dissecting of the first diseased mare at that school. The subject of diseased mares and what to do with them is the important feature at the Graham Scientific Breeding School. Any breeder would be mighty proud to be able to make a thorough examination of a mare, as to her breeding condition, so that he can know and explain the exact condition.

There is only one institution in the world that teaches men to do this. Only those who have attended this school, or the instructors, are in a position to intelligently discuss the work of this school because there is a lot of information given here that is not given at any other institution in this country, or any other.

The most that can be said for any institution is that it is a success. Practically every student that has attended this school during late years has made a wonderful success, excepting a very small number who have not given enough attention at the school. An average horse breeder, regardless of his education, can get excellent results by listening to the illustrated lectures and taking part in the demonstrations. The practical work on mares is the important feature.

Those who are compelled to breed only by the natural service are the ones who should attend this school by all means. Where only one mare can be bred at a time, every service should be made profitable. What breeder can afford to make the mistake of making three or more natural services on about a third of the mares presented when that can be readily avoided? Twenty mares with three services each means 60 services lost or only a very small number of colts for that many services. This is a severe drain on the stallion without any compensation. Practically every neighborhood has a good number of barren mares, some of which are diseased. If the stallion serves a diseased mare, this infection can be transmitted to clean, healthy mares, and increase the difficulty. Mares carrying infection may look fat and sleek and be impossible for the average breeder to detect without special training. Breeders who are able to detect these mares and correct their condition are increasing their per cent of foals rapidly. A lot of breeders are getting from 70 to 80 per cent of their mares in foal.

There are a lot of breeders who expect to attend this breeding school, and have made up their mind to do it, but continue to put it off. A lot of these men will wait until the breeding season starts, then see the necessity for this important information. When the barren mares begin to come, and they do not know what to do with them; then their trouble will be increased because they realize that this infection can be carried from one mare to the other, and they do not know which mare to watch.

There is just one way to arrange this matter and that is to be on hand at the next term of school which begins Monday morning, at 7:30, February 2 and lasts one week, with day and night illustrated lectures and demonstrations on important horse breeding subjects. The February term of school has always been the largest term. In that class is always found a lot of breeders who have been here at former terms, and their experience is valuable. The tuition fee is $25 for a life membership.

After all the strong testimonial letters that have been printed, giving the names and addresses of those who have graduated from this school, is there any breeder who does not believe that this school must have great value for horse breeders? A large number of these testimonials have come from men who have attended this school in years gone by, and have put this information to the practical test. This school has long passed the experimental stage. It was understood why many breeders did not attend during the youth of this school, but since the practical test has been applied and found continuously satisfactory, it would seem that every horse breeder could see that there was something he did not have which he ought to have as a horse breeder. Is it worth while to double the income without having to increase the investment? Is it of any importance to have a large per cent of colts? Is it any satisfaction to have your customers say that you are an expert horse breeder and thoroughly understand your business.

A diploma from the only recognized horse breeding institution in the world will give the breeder prestige. But the best advertisement is when a graduate has been successful. Those who have attended this school have gone home and have seen many things in their breeding operations that they never saw before.

The following testimonials from some of those who have attended the school, are published for the first time:

Dec. 24, 1913—I think the Graham Scientific Breeding School is one of the greatest schools in the world, and I can boost for it any time and all the time. The people are like homefolks and you don't get homesick. It teaches you work that you can't get any place else in the world. I have found 11 mares since the November term that were very badly diseased and have shown the people what a diseased mare is. I have a baby boy 13 months old and expect to send him at 15 years old if he lives.—O. M. Mouse, Altona, Mo.

Dec. 19, 1913.—I think any one that is raising stock of any kind ought to attend a term of the Graham Scientific Breeding School. No breeder can afford to go without attending at least one term.—C. H. Townsend, Pine Ridge, S. D.

Dec. 23, 1913.—I think the Breeding school is all right. I think I was greatly benefited by attending the August term and expect to be on hand January 5 for more of the same kind of knowledge. I hope I may have the pleasure of meeting many of the old class. I am sure there will be many new ones.—Delbert Archer, St. Charles, Ia.

Dec. 20, 1913.—I have attended your school from time to time and found it the seat of information in the breeding line. Any one who attends your school and applies himself, and follows the principles taught, cannot help make a success of breeding. One of the features taught in your school is how to tell a diseased mare, which is one of the most important things to the horse and jack men today. They are floating in all locations and climates in the United States. You can expect my return on January 5.—A. W. Fravel, Centralia, Mo.

Dec. 20, 1913.—I consider the instruction and training given by your school second only to the ownership of a stallion, to a man who contemplates horse breeding. I would advise any one in the business who has not attended a session of this school to make almost any sacrifice to attend.—C. E. McMullin, Montrose, Colo.

Dec. 23, 1913.—I atended the Graham Scientific Breeding School during the February term, 1912, and can

(Continued on page 12.)

STALLION SERVICE RECORD BOOK

This book has 200 pages like the specimen page in this ad. It is substantially bound with a good, strong waterproof cover. It has 20 index pages for keeping the owners' names in alphabetical order so that any name or mare can be found quickly.

The breeding contract at the bottom is the strongest possible kind of a note. It is a big help in making collections, as nearly every state has a law for the collection of labor debts without exemption, and this is a contract to pay for services rendered. Before it is signed run a pencil through two of the lines in the contract, leaving the line that makes the kind of a contract you want. Many will sign a contract who would refuse to give a note.

This book has a calendar and a gestation table. It can be used for several sires without carrying more than one book. This is the most complete and up-to-date service record book printed. It is a nice size and can be carried easily in any pocket. Every breeder should have one. After improving it for several years, the result is this most satisfactory book. A complete new edition is just out. Although this new book has double the capacity of those offered heretofore, it sells at the old price. It is not bulky as it carries no advertising or other unnecessary matter. It will be the standard record book used by the leading breeders.

If you are not satisfied with the book or do not consider it the best and cheapest on the market, return it and your money will be cheerfully refunded. The price is 50 cents; six for $2.75; postage prepaid. Send all orders to the

All persons are warned not to reprint any part of this paper without first securing written permission from the American Breeder, Kansas City, Mo.

STIMULATE HORSE BREEDING.

A lot of mares are not being bred. This is especially true of the better mares in the hands of men who could develop the progeny. There are enough inferior horses but there are not enough good ones. Mare owners in nearly every community need some stimulation—they need a standard to go by.

We want our readers to send us articles and photographs concerning good colts and good mares. Who has the best developed colt, or who has a mare that has produced a large number of good colts? We want a lot of these photographs for the benefit of the mare owners. Weigh the colt at a particular age so as to show the average mare owner what can be done, whether it is necessary to develop the colt or not. Good feed is as necessary as good blood. It is not necessary that a case be a record breaker to be accepted for these issues. We want good animals, of course. We especially want articles that will stimulate mare owners in taking better care of their mares and their colts and using better sires. This material will have an excellent effect, coming from subscriber-correspondents. No matter how fair we would be editorially, there will be some who think we were going to the extreme. Those new readers do not understand the situation like practical horse breeders do.

It will also be necessary that these Mare Owners Editions give some information concerning other live stock in order to hold the attention of those interested in different classes of farm animals. We are preparing special material that will stimulate the business for the owner of every good stallion and jack. We believe that the owner of every good sire should send in at least ten of his best mare owners. These are the leaders in a community. Until January 20 we will accept orders for Mare Owner Editions in clubs of ten for $1.00. A large number of subscriptions will expire before that time. The mare owners and the subscription renewal can be attended to with one letter. We want horse breeders to be interested in this proposition.

BREEDERS AS COMMUNITY LEADERS.

Many breeders go through life without realizing their power as leaders in their community. The advocates of improved stock are usually improvers of general conditions. By producing one animal that will sell for as much as two have formerly brought, stimulates other lines of development. The advancement, perhaps, comes so gradually that the individual has not realized his power in that direction.

When an important improvement in any particular class of live stock is made, other fields for improvement are apt to be studied. There is perhaps no other class of men in the agricultural industry that can be of as much service in the general improvement of live stock and farm crops as the breeders, and more especially the owners of high class stallions and jacks.

Owners of good breeding stock are visited by practically every farmer in their sections during one breeding season. A little conversation with this man; a few questions answered for another, through the entire season, sows seed for thought and distributes a lot of knowledge—particular information that the farmers are in need of. From this information, if reliable, a world of good can be accomplished, but if it is not the right kind, results will not be so gratifying.

A little study along lines of special interest to the farmer who visits a breeding establishment will have value in the encouragement of future patronage, as well as aiding the breeder to be of greater benefit to that community at large.

There have been prepared, books and reading material of others kinds galore. Too much of this material has been measured by quantity rather than by quality. One of the reasons that breeders and farmers are not better posted on existing conditions today is that there is too much inferior reading matter flooding their mails.

On numerous occasions have our readers asked us to condense the information on important subjects which every breeder and farmer is interested in, and prepare it in just such a manner that a lot of substantial knowledge can be gleaned from a very small amount of reading matter.

We tried such an experiment last spring, and it met with the approval of practically every reader of this paper.

There are two very important subjects, the fundamentals of which have been sadly neglected—perhaps two of the most important. We believe a few lessons well condensed so that each line would convey some real benefit, can be prepared for our readers. The first one is "hog raising." The average litter of pigs is less than three saved. A little more information on this subject should at least double the net income for the average breeder without increasing the investment.

Forage and pasture is another subject that must have more attention in this country if we expect to improve upon our present standard of live stock production. Live stock must be raised cheaper, because the available pasture is decreasing each year. How to make the land produce the most forage, is a problem, and the seriousness of this question will increase with time. These subjects should interest practically every live stock breeder. Every farmer should raise hogs and he should have forage for all of his live stock. Every stallion or jack owner, whether he pretends to be a farmer or not will be interested in these subjects sooner or later, if for nothing more than answering questions intelligently.

If there are any who are not interested at the present time they need not be offended, because the paper will be made large enough to accommodate this material in addition to the usual reading matter. We hope every one will be interested in this new addition. We have taken this subject up by mail with a good many of our readers and practically every one of them has expressed a desire for this new material. Asking the advice of our readers on this subject is in keeping with our regular policy.

COLLECTING SERVICE FEES.

In order to encourage better sires we believe that a law giving the owner of the sire a lien on the mare and colt for 18 months would be justifiable. Several states have such a law, effective without requiring the stallion owner to file any papers or ask any one to sign anything. Breeders should be better prepared for the next legislature than they were at the last.

Stallion breeders' organizations can solve this problem. If a lien can be had on the mare and colt for 18 months, a step in the right direction will be made. We hope to see every state have such a law within the very near future. When breeders know that collections can be made, the method of charging cash in advance will not be talked of very much. An effort should be made to introduce the Arkansas stallion lien law, which is the best law in existence for stallion and jack owners. A penalty is attached for those who attempt to sell the mare before the service fee is paid.

We should like to see every county in the United States, where horses are bred, organize immediately. The lien law situation is very important, but there are other things which we will mention later that should receive a lot of attention in these organizations. Organizations of this kind mean great strength.

Every breeder should make a little study of his prospective colts. Some breeders will be moving in the very near future. Find out where they are going and how many colts there are likely to be and when the collections are to be made. Also watch every public sale notice. When pregnant mares are to be sold be on hand at the sale. Listen for conversation concerning those who might be selling mares, either to horse buyers or otherwise. A good list of intimate friends among farmers who have telephone connections, is an asset that every breeder should cultivate. Friendly relations with these men will help to collect a lot of doubtful bills.

PURCHASE STALLIONS AND JACKS EARLY.

We always advocate the purchase of breeding stock early. A better selection can be had. Stock can be brought home early and have the prospective patrons to look at it and generally increase the business. The farm work is usually done and this is a good opportunity to begin. There are a lot of excellent animals on the market, but the demand is for the best ones. The early buyers will have the best opportunity to select.

RENEW YOUR SUBSCRIPTIONS NOW.

A good number of subscriptions will expire during the next two months. It takes about three weeks to renew the subscriptions and get them on our list after expirations. By renewing several weeks in advance it will insure that the subscriptions continue without any break.

The date of the expiration is on every wrapper; 1-14 means that the subscription expires this January; 2-14 means that the subscription expires in February. Several wrappers are kept addressed ahead for each subscriber, so that the change in the date may not appear immediately on the wrapper, but the change will be made on the list and the paper will continue when renewals are received in advance. We hope every one who possibly can, will renew his subscription as soon as convenient, because a very large volume of renewals will be coming in soon. This will make a vast amount of work for our subscription department. The number of new subscriptions is increasing also at a wonderful rate, and this with the renewals makes the work the heaviest we have ever had. Sending in renewals early will be a real accommodation to us and insure your paper without any break.

The subscription price will be three years for $1.00 until further notice. Those who wish to be sure of this rate should send in their subscription now.

SOME FARM NEIGHBORHOODS STILL LONESOME.

Let no one doubt the seriousness of the exodus from the farms (which still is going on—back-to-the-land propaganda notwithstanding). The report of W. D. Ross, superintendent of public instruction for Kansas, states that in 220 country school districts last year no schools were held, while in 2,924 schools the average attendance was 12 or less. Isn't it about time that facts like this taught city people to drop the idea that farm life is all ease and profits, and to concede that the farmer is entitled to more than he has ever yet gotten from his hard work and "doing without."

SACRIFICING GOOD ANIMALS IN PUBLIC SALES.

One of four Illinois readers informs us that at a public sale just held in an adjoining county, there were four fine pure bred mares that sold cheap. He states that he would have given more money for these mares if he had been there, but he did not know that this public sale was going to be held.

He suggests that any many planning to sell such animals should have an announcement in the paper that practically every horse breeder reads closely—the American Breeder. This suggestion is worthy of consideration. Practically every one of our readers is a prospective purchaser of stallions, mares, jacks or jennets. Too many breeders are misled by statements of some enormous circulations. They do not stop to think that practically every one of our readers is a possible purchaser, and that most other papers reach mostly people who are not interested in this kind of stock.

Nearly all of these men who own good live stock like to attend sales where good stock is being sold. Their attendance is usually of an advantage even though they do not buy. But these are the kind of men that usually do buy the stock, because they know what it is worth; what they can do with it and what kind of a revenue can be expected. If a large number of men are present who know the value of such stock, it will not be

THE NEXT TERM
Of the Horse Breeding School
Will be February 2 to 7

Breeders with money invested in the business cannot spend a week's time and their tuition fee to better advantage. Fathers and mothers need not be afraid to send their boys. Ask any graduate.

It's the greatest opportunity offered anywhere to make yourself an expert breeder, to learn to avoid the points of the breeding business that cause so much loss to stallion and jack owners every season. All of the instruction is practical and everything taught is demonstrated whenever possible. All instructors but two are expert post-graduate veterinarians doing educational work recognized by the United States Government.

SOME OF THE SCHOOL'S WORK, INCLUDING SUBJECTS TAUGHT

Dissecting Mares, Anatomy of the Male and Female Organs—Physiology of the Generative Organs—Cells—Infection—Breeding Questions—Breeding Instruments—Foaling—Scientific Mating—Horse Judging—Mule Judging—Barren Mares—Barren Stallions—Abnormal Conditions—Diseases of the Foal and Fetus—Diseases of the Male and Female—Contagious Abortion—Feeding—Testing Breeding Stock—Determining a Mare's Breeding Condition—Buying Breeding Stock—Hereditary Defects—Horse Breeding—Rectal Examinations for Abnormal or Diseased Conditions; also for telling whether a mare is in foal or not—Getting the Semen—Inserting Capsules, etc.

EQUIPMENT AND EXPENSES.

The school has its regularly equipped building, which is just north of Convention Hall, Kansas City, Mo. In the lecture room of this building are numerous charts, stereopticon apparatus for showing pictures and illustrations during the lectures, all kinds of breeding appliances and other equipment necessary for instruction in all the latest methods in horse breeding. A veterinary hospital is utilized in the dissecting work and the barns of dealers in mules and horses in the lectures on types, judging, etc.

Accommodations for all students will be arranged for by the school authorities without charge. They have reserved rooms and board at moderate rate—from $1 to $1.25 a day—sufficient to provide quarters for all who come.

Remember the date and prepare to be here next term. When you get here take Observation Park street car at Union Depot; get off at 12th street and walk one block east. **Tuition is $25, which entitles all students to a free return privilege for life.** For other information address

The GRAHAM SCIENTIFIC BREEDING SCHOOL
225 West Twelfth St., Kansas City, Mo.

sacrificed, to say the least, because these men will buy it.

Another mistaken idea is that because some breeder is located in Illinois, or Indiana, or Colorado, or Minnesota, or Texas, that they are out of our territory. This paper has a national circulation, and reaches most thoroughly the good men of the particular class of people that horse breeders wish to reach. We hope every one will get the idea out of their head that this is a local paper. The American Breeder now has a larger circulation in the state of Illinois than in any other state, but several other good states are not far behind. It circulates wherever good horses and mules are produced.

We would suggst that every breeder who contemplates holding a public sale that contains stallions, mares, jacks or jennets at least would write us early and send an advertisement. A very small one is better than none, but the advertiser should not take chances on having his ad overlooked. His time for interesting buyers is limited. One buyer who knows the value of the stock might be worth from $50 to $500 on a single animal. Where possible sale dates should be made several weeks before the sale, as this often prevents an accidental conflict of dates. More possible buyers can be reached (for the same amount of money) than can be reached through any other advertising medium. Both large and small public sales have been tried and made more successful by advertisements in the American Breeder.

To the American Breeder:—I was well pleased with results of sending out Mare Owner Editions last spring. Don't think I would send it out indiscriminately, but choose the up-to-date, looking-for-something-better horsemen. The American Breeder is always a good advertisement. My patrons were well pleased with it last spring and I found it one of the best advertising channels I have used.—Lester Jones, Edmunds County, S. Dak.

WHERE MOUNTAIN LIONS KILL COLTS.

To the American Breeder: Enclosed find check for three years' subscription to the American Breeder. I do not think my subscription has run out but I do not wish to be without your paper for a minute. It is valuable to anyone in the breeding business.

I run a bunch of range mares, ranging from 900 to 1300 pounds. I breed every mare at least once to our jacks in the spring and in the summer I turn stallions and jacks lose with them on the mountain. This year we had 85 per cent of mares bred in foal and have now 75 per cent of live colts; the ten per cent being lost by accident, mostly, principally killed by lions.

We have four stallions, a sorrel saddle stallion (a quarter thoroughbred and a three-quarters Standard), one Morgan and two cross bred horses, Percheron and Shire, and two registered Mammoth jacks. The mares, as a rule, winter out on the range, but we feed the geldings and mules all the alfalfa hay they can eat in the winter. In the summer they range up to 9500 feet on the mountain. Wishing you success to your excellent paper. — Harry E. Stockham, Delta County, Colo.

ASKS SOME BREEDING QUESTIONS.

To The American Breeder:—I consider the American Breeder the best paper to ask questions, as a natural consequence, that makes it the best paper to find the correct answers to them. First I want to say a word of caution to those who are not subscribers or acquainted with the American Breeder. Several men whom I asked to subscribe for the American Breeder, replied "I have seen that paper and I don't want it." I asked why, and they replied: "To be plain with you it is not what it claims to be." I was compelled to get the other paper, the one they had reference to and compare them, before I could convince them of the difference in the two papers. The other paper is or was similar in name before the American Breeder changed its name, but nothing to compare with the American Breeder when it comes to merit.

Now brother subscribers, please answer these questions. How soon can you tell, and what is your surest way of telling when a mare or jennet is with foal. My surest sign is that where they urinate on green grass it will die.

Will someone tell us how is the best way to get those mares to conceive while their colts are young, or better still, the first time they are bred! I mean every other year mares.

Also please let us know what is customary or fair in letting jennets out on the shares.—M. E. Mayo, Benton County, Arkansas

Hotel Convention

12th and Broadway, Kansas City Mo. Large, airy rooms, good beds. Special rates to students of the Graham Scientific Breeding School. Two persons in one full bed, 35c per day each. One person in a full bed, 60c per day. Good restaurants in connection and nearby. Take Observation Park street car from in front of Union Depot direct to our corner. Only a few minutes' walk to the school building.

Excellent Showing Made by the "Breeder"

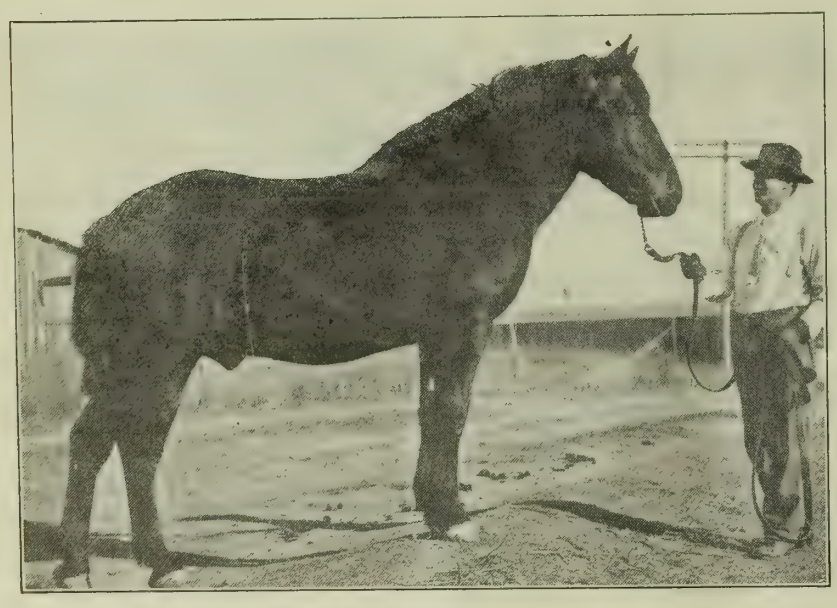
To the American Breeder:—Now that the Percheron sale is a matter of local history at least, I want to thank you for the excellent showing made by the "Breeder," both as to the number of inquiries received, and in the wide territory covered by same.

With kindest regards and wishing you a Merry Christmas and a Happy New Year, I am, Yours very truly, W. S. Corsa, Greene County, Illinois.

Percheron Stud Colts for Sale

In order to encourage the development of the young stock we are beginning a series of free mention of those having such stock for sale. There is no money consideration connected with this new venture. It should not be called "free advertising." It is given exclusively to young stock, which we hope to encourage developers to purchase early.

The first offer was made for sound Percheron stud colts less than 1 year old, eligible to registration in the Percheron Society of America. It was limited to the subscribers of the American Breeder. Nearly all the Percheron breeders in this country have had an opportunity to list their colts. The comparatively small list that follows teaches one of two things —that the owners of these colts do not understand the value of publicity (in case they want to sell) or that they generally prefer to keep and develop the colts themselves. We hope this public mention will cause those interested to bunch these colts where enough of them can be owned on one farm to make it profitable to thoroughly equip a suitable place for their full development.



These stud colts can run together with safety until at least 30 months of age, if no other animals are allowed to get near the enclosure. Many posed to be sound Percheron stud colts, less than one year of age. The names and addresses of the owners with the number of colts for sale are are as follows:

CONNECTICUT.

	No. of Colts.
Windham County—	
S. D. Wicks, Pomfret	2

ILLINOIS.

Bureau County—

Registered Percheron weighing 1470 pounds at 18 months. Owned by J. W. McElwain of Nebraska.

of the successful developers use self-feeders, giving these young animals all they want to eat with a large enclosure fenced stallion tight. A large shed on the north, with wings on each end to serve as wind breaks and with a good water supply, will do much in the way of bringing out all the good qualities as nature intended.

Those who wish to purchase animals will find these names and addresses divided into states and counties and the towns given. A purchaser may arrive at the county seat, or a smaller town, and by making some inquiries, usually at the telephone office, many of these men can be reached in a few minute's time. Those who already have a number of colts might purchase with profit a few more animals of the same kind and develop them together. This will create a special demand for these colts and the owners of pure bred mares should be benefited by this encouragement.

In the Percheron district of France, where horse growers make the best money colts are purchased early and bunched and developed. Why not do likewise in this country All of the colts given this free publicity are sup-

The North & Robinson

Imported and Home Bred Percheron, Belgian and Shire Stallions and Mares acclimated before selling and put out in condition for service, have earned for us

MORE SATISFIED CUSTOMERS

in Nebraska and adjoining states than any other firm can show. We have the farms, the feed, the climate and the experience to import and breed and handle draft stock economically and successfully, and our customers as well as ourselves reap the bentfit.

Never Less Than 100 Head on Hand.

Come any time; we can supply any need in this line.

NORTH & ROBINSON Co. Grand Island, Neb.

Joseph Rousselle & Sons, Seward, Nebraska

PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

We make a specialty of good, big, rugged type and action. Our two year olds weigh from 1800 to 1900; age horses from 1850 to 2260. In fact, we can show about as big horses as are living. We were in Europe early, which enabled us to get the right kind. We are natives of France and save in buying, also in selling to customers. Prices from $900 to $1,250; a few tops a little higher; home-bred come cheaper. Will furnish a state license according to the Nebraska law. Our guarantee and terms are right. Write, or better, come and see us. Seward is 26 miles west of Lincoln. Farm joins city on the north.

35 HOME-GROWN PERCHERON, SHIRE AND BELGIAN STALLIONS AND MARES AND 50 REGISTERED JACKS AND JENNETS.

of the big boned, rugged kind, from 14 to 15½ hands high. This stock is all pasture raised and runs in the open. Will make a special low price on my imported Belgian herd horse, Champion 4980 (58644); sorrel; weight 2,200 pounds. His fillies are in the way. This horse is 6 years old and a sure breeder. All stock sold with breeding guarantee.

HENRY BECK, LITCHFIELD, NEBRASKA.

20—STALLIONS, JACKS AND JENNETS—20

Imported black Percheron stallions, 5 and 6 years old; weight from 1700 to 2100 pounds. These horses are well broke and tried breeders. Can show best colts in Kansas. Also one fine sorrel Morgan stallion, 7 years old.

Big, black, registered Mammoth jacks and jennets; 1 to 5 years old. Jacks 15 to 16 hands high; tried breeders and quick workers. Can show colts. Herd headed by imported Spanish jack. We won more prizes at the Kansas State Fair in 1912 than all our competitors. Farm 30 miles Northwest of Hutchinson. Come and see us. Will meet trains at Chase or Raymond. **J. P. & M. H. MALONE, Chase, Rice County, Kans.**

Two Stallions for Sale; also Fillies and Mares.

One Black Percheron 3 years old; one Clydesdale 2 year old, and a bunch of Clydesdale Fillies and two mares 7 and 8 years old. This is all registered stock—some of them from imported stock on both sides. For further information inquire of

John Sparrowhawk Wakefield, Kas.
(Forty Years a Breeder.)

PERCHERONS

AND ONE JACK.

Stallions, mares and colts. All of desirable ages. Prices from $250 up. The right kind. Come and see them. The jack is black with light points.

H. M. STEPHENS, Munden, Kas.

LEE BROTHERS ANNUAL PERCHERON SALE

MANHATTAN KANSAS, TUESDAY, JAN. 27, 1914

At the Kansas State Agricultural College Sale Pavilion. Steam Heated

40 Imported and American Bred Percheron Stallions, Mares and Colts, including our entire show herd 1913, except the Champion, Scipion 27123 (43667).

22 Mares bred to the champion, Scipion 27123 (43667), the champion of France and America, also made champion Kansas State Fair, 1913, at the age of 16 years.

15 Stallions including two of our two-year-old 1913 show stallions, weighing over 2100 pounds each.

Reinhard, the reserve champion of four shows—no doubt the greatest two-year-old stallion that will go through the sale ring in the United States in 1914. Weanling colts sired by Scipion.

THE CHAMPION MARE MARCELLENE.

Two three-year-old mares, Marcellene and Flora were placed first and second in every show; four times champion and reserve; undefeated harness pair; Madeline and Monita, our two undefeated yearlings, also Nita by Scipion; out of Beattie, champion Inter-State Fair, St. Joseph, and undefeated.

OUR SHOW RECORD

32 champions and reserve champions out of a possible 44; 130 firsts or blue ribbons out of a possible 145 chances in the following shows: Kansas State Fairs, Topeka and Hutchinson; Inter-State Fair, St. Joe; Missouri State Fair, Sedalia, and the Great American Royal Live Stock Show, Kansas City, Mo.

For catalog or other information, address—mentioning the American Breeder,

LEE BROTHERS, Harveyville, Kansas

P. S.—Spend a day at this sale and see the world's greatest Agricultural College and the season's greatest sale.
Auctioneers:—Harriman, Snyder, Crews and Brady.

(A Dispersion Sale)

Oskaloosa, Kansas, January 29

On the above date we close out our reserved stock as follows:

7 Young Stallions
13 Mares and Fillies
6 Mares Safe in Foal

Over half this offering are grandsons and daughters of Imp. Casino. Colors mostly black. Stock in good thrifty breeding condition.

Send at once for catalog mentioning the American Breeder.

SNYDER & STALONS OSKALOOSA, KANSAS

Jas. W. Sparks, Auctioneer

SOME QUESTIONS ANSWERED

To the American Breeder:—Do any of your staff ever buy mares, stallions or mules on commission? How much circulation have you in Illinois? I may wish to use some space to advertise some cattle later. While my subscription does not expire yet for some time, I am sending you another dollar for three years extension. I have absolute faith in you people. Some papers still continue to carry a notorious breeder in the dairy cattle, after several of the most reliable publications have refused him space. Clean breeders should not give these publications any business and turn all they can from them. I should like to know what one you refer to on the front page of your issue of October 5, 1913.—J. G. Whetstone, Hancock County, Ill.

Editor's Note:—The chief reason for publishing the above is to show how the best stockmen and farmers look upon our stand in favor of "turning business away from the crooks." It is the only thing that will "get under the hide" of most "successful" crooks. No one connected with the American Breeder does any buying on commission, but where it is possible to spare the time we gladly help any subscriber to locate such animals as he may desire. We have now in Illinois our best state circulations. In no other state have we quite so many readers.

CLOSING OUT SALE

Friday, January 30.

FOWLER, IND.

50 REGISTERED PERCHERONS

On account of my health I have rented my farm and will sell at auction:

6 Stallions, all Prize Winners at the Indiana and Ohio State Fairs, 1913.
20 Imported Mares of the "wide as a wagon" kind, and with foal.
6 American Bred Mares, with quality and weight, and in foal.
18 Weanling Colts, the growthy, shapely kind that mature to a ton.

SEE WHAT THESE HORSES ARE LIKE.

Perfection 78489, gray, 3 years old, won first in class and was American bred champion at Ohio and Indiana.

Highland Boy 78488 (weight 2000), gray, 3 years old, was second in class and reserve champion.

Beauty 72826, brown, weight 2200, 4 years old, of my own raising, was the Grand Champion Mare, Ohio State Fair.

Showing 14 head, I won 29 ribbons (including 9 firsts and two championships) at Ohio, and 28 ribbons (including 9 firsts and two championships) at Indiana.

Be sure to write me for catalog, and mention the American Breeder.

C. A. RANDOLPH FOWLER, INDIANA

HORSE BREEDING WHERE NATURE HAS ITS WAY.

To the American Breeder:—There have been so many men who have paid out their hard earned money for good stallions and get very few foals, that it has hurt the horse breeding business a great deal, and those same men are as much at sea as ever as to why these good stallions don't get more colts.

As I have put in 20 years on the range with horses, and have watched them and studied them in their natural ways, I will give my idea as to why these stallions don't get any more colts. I have been with mares and stallions at all hours of the day and night. In the first place, the producer grows the stallions too quick to give all parts of the colts a chance to develop. The reason he does this is to turn the colt into cash as quickly as possible and make him weigh as much as he can to make the buyer think his horses are better bred than his neighbor's. While a buyer is looking for a stallion he is considering the price all the time. He sees the price is much higher on the older colts so he will decide to take one of the young ones as he thinks he can commence using him at two years old.

Right here is where he falls down. This is what makes so many shy breeding stallions—they are allowed to serve mares entirely too young. I have seen men trying to use stallions at one year old. No colt should be allowed to serve a mare before he is three years old, if you want a sure getter. If he serves before that age he should be gelded right away. It would be a good thing if we had a law compelling a man to castrate his colt if he allowed him to serve mares before he was three years old.

Now what I notice on the range where nature has its way, is this: The older stallions invariably whip the young ones because their teeth are much better than the young ones. Therefore, the young ones are kept whipped off until they are old enough to whip the older ones. They have one fight each year; this is early in the spring; the rest of the year he only has to see his master start until he will take a hike. The young stallion has a very poor show at a mare, as he is so rough and awkward a mare won't stand still for him; therefore, she will mate with the old horse and won't leave him at all until she is out of heat. So the young stallion never gets to whip the old horse and by the time he gets to be three years old he is educated enough to herd a bunch of mares, so he leaves his old home or bunch and strikes out like a young man and travels until he finds a bunch that has stayed away. He will take charge of them and herd them. He is very careful to not let them get over near the old horse's range, as he is afraid of him. So you can see why the range stallion is so much surer than his brother that is kept up and encouraged to serve mares while he is young.—L. D. Canyon County, Idaho.

HOW TO SELECT A BREED.

To the American Breeder:—I will try to answer the inquiry of some in regard to what breed of horses or what breed of cattle to start in business with. In the first place one generally has a preference to a particular breed. If he does, that is the one for him to start in business with. He will never be satisfied until he tries that breed. If he has no preference I would advise him to look at what he considers to be the best breeds and select for himself, because some men can accomplish more in breeding stock than others. I might tell him one kind, you another and some one another. He might choose a different one from any of us and meet with good success, then he would think we were all wrong. Or he might try the one we would advise and make a failure, then he would condemn us and the breed for his failure. He should select for himself.—J. B. Yelton, Anderson County, Kans.

MONEY WELL INVESTED.

To the American Breeder:—I have sent the Mare Owner Editions to my customers for two years past and find it to be money well invested. I am satisfied that the mare owners get more education out of these editions than he would be likely to get in any other way. I find that hints for the care and condition of their brood mares during the breeding season is brought to thier minds at just the opportune time and at a time when they will give heed to the advice. My experience is that the Mare Owner Editions should be placed in the hands of all permanently located customers.—John J. Houtz, Bates County, Mo.

DOCTORS, BANKERS, MINISTERS, TEACHERS INTERESTED.

To the American Breeder:—I want to write you a few lines just to let you know how much I value the microscope in horse breeding. I would not take five times what it cost if I could not get another one. It has been a great help to me in convincing mare owners that the stallion was sure. I always have a crowd around at breeding time; never want for help; doctors, bankers, ministers, teachers and many others are anxious to see and help in capsule breeding. I have bred 13 mares from one service and could have bred five or six more. I would not go back to the old way of breeding mares. Most of my patrons are for capsule breeding; nothing else will do. I breed once one day and twice the next and test the semen each time, and my patrons look for it.—B. J. Foxall, Alberta, Canada.

"IT PAYS THE ADVERTISERS."

To the American Breeder: We did some advertising in your valuable paper and must say that it pays the

LA FAYETTE STOCK FARM

Largest Importers in America of Percheron and Belgian Stallions and Mares. Over 200 head on hand. When your locality has a horse from this great farm every one knows he is the right kind. Write us or come and see us.

We are also breeders of pure bred Hampshire Swine.

GEO. W. SOUERS & SONS
HUNTINGTON, INDIANA

OUR ADVERTISEMENTS

represents firms and articles that we believe to be reliable.

We refuse all whisky and beer advertising and all advertising of medical nostrums and questionable medicines, and medical insttutions. We refuse all "get-rich-quick" scheme advertising, fake jewelry, and cheap, sensational book and music advertising. We refuse to carry the advertising of live stock breeders and importers who have become notorious for crooked or disreputable practices.

This advertising, such as we refuse, pays the highest rate to the papers that will take it, and "asks no questions." When you see this kind of business in big, well-established, money-making papers, therefore, you have some idea of the income the American Breeder sacrifices in refusing to carry it.

If you believe we are doing right and deserve your co-operation, investigate the institutions and firms for which we do advertise, write for their catalogs, buy from them when you can, and always mention the American Breeder.

Remember that the prices and quality of advertised goods are more sure to be right than any others, for advertised goods are sold faster, sold more direct, and sold in more open competition than any others.

REGISTERED PERCHERON STALLION

advertiser, and that it is the best paper of its kind. I do not think that we could get along without it. —Frank Sauer, Barnes County, N. Dak.

GOOD FIELD FOR MANURE SPREADERS.

To the American Breeder: The following subject has been discussed so often and by men who are better able to express themselves than this writer. However, it seems too much can't be said along these lines. We believe the most neglect is shown breeding stock by their caretakers through carelessness in providing proper surroundings, thereby causing themselves more trouble than all other things combined would do.

We visited a number of breeding barns the past summer just to "look 'round," as we are always greatly interested in what the other fellow has. Now before we give any criticism we wish to say that we are not perfect by any means. One of our faults (at least in the eyes of the other fellow) is keeping our stock not up in show condition; letting them get "sunburned" and also not so fat as they might be. But one thing we can say, and we are just a little proud to say it, our stock produces the colts in quality, as well as in quantity. And isn't that the main thing?

At some of the barns we found good surroundings; at all of them gold stock. At one place we found stock that had been shipped in several hundred miles; bought at long price. There were also several head of home bred individuals. This stock was all in stalls closed up tight; no ventilation; manure knee deep; lots of room for lots, etc. But no, they were kept in the barn; were in good flesh but every jack had one or more sores. One was standing on three feet. The owner was complaining about not having time to see after him. Also "cussed" the flies good and plenty.

At another place we found either a stallion or jack stored away in every corner, about a dozen in all. Two or three had lots 20 by 30 feet to run in, while the others were in stalls. Feed and water being carried to them and they never saw daylight. Some had sores in every joint about to rot from standing in manure. Here, too, we heard more remarks about the d——— flies.

At another place we asked the owner why they let so much manure accumulate. There were at least 25 loads, from four head. The answer was, "We have too much other work, can't fool with that." Still he complained about the flies, and was using dope to keep them off of his jacks' sores.

All these men claimed to be subscribers to the American Breeder and had only words of praise for it. But do they read it? Several of these men when asked why they kept so much stock, and if it would not be to their interest to dispose of some and adopt the capsule method, would exclaim, "Why, do you think that method will work." When told that we had been using it for several seasons, and with success, they would say, "Well, my customers are so behind the times that it would be impossible to teach them that there was anything in it." One man nearly had "fits" when told that we refused to breed mares when not in fit condition. He said, "Why! if I would turn down a mare owner and refuse to breed his mare, he would never come back." And these men claim to be subscribers to the American Breeder.

Some of them live in stock breeding countries where one sees as good horses and mules as are to be found. Do they read their papers? Of course we have had mare owners to get "riled" because we found their mares unfit for breeding, but when we explained matters to them (which we were enabled to do by having attended the Graham Scientific Breeding School) they would generally not be hard to convince that it was to their interest, as well as our own, when we refused to breed certain mares. One man, though, after we had bred his mare twice with capsule, he insisting on it, after being told his mare would not get in foal, got mad when we told him the third time that it was useless to breed her in that condition, and said, "By Gad! I know where I can get her bred," and left with her. We hear that he had her bred a number of times but we could never see any sign of any colt at foaling time, or since.—From the sticks, Chris. J. Weiterer, Logan County, Ark.

BREEDING PLANT AND METHODS MODERN.

To the American Breeder (The best paper in America for the farmer and breeder.):—I left Chillicothe, Missouri, about one year ago and bought a farm at Dunlap, Iowa. I sold all of my breeding stock just before I left Chillicothe, except my two largest draft stallions, one a Percheron and the other a Belgian. I find a better class of mares here than in Missouri, because there are very few mules raised here in this locality. I have been looking around some among my customers, and I feel almost certain that I am going to get 75 per cent of the mares bred, in foal. I find with the instruction I got at the Graham Scientific Breeding school and the practice I have had since then, that my work comes easy for me now. I had a few mares come to me last spring that were around eight and nine years old and had never had a colt. I found on examining them that they had sometime been bred to a stallion that had carried infection from some diseased mare. I treated all such mares before breeding and find, after having made special inquiry about them lately, that most of them are in foal. These are the kind that make me feel good when they settle, and quite a good many of them settled the first service after treatment. I do not take much interest in the old mares that do not breed, it is the good young ones that I like to do my best to get.

I work my stallions and have a four acre pasture for them. In building fence for this pasture I used three 12-foot posts, set five feet deep in the sand and cement, for the corners, and the other posts are ten feet, set in the ground three feet deep. Used woven wire 58 or 60 inches, put on the posts up off the ground some, so that it makes a fence 7 feet high—one that they cannot get their heads over and ride the wire down.

I would like to hear from more of the breeders through the American Breeder as to what per cent they are getting and what success they have in treating mares. I find there is one class of mares that when the hand is drawn from the vagina it is covered with a mucous that is hard to wash off in water—seems to rub slick like vaseline, and that these mares do not settle without being flushed out before breeding. With a healthy mare the hand washes of clean easily.

I am also somewhat interested in hogs. My hogs had the cholera this fall, in fact, there are only two or three parties in this locality whose hogs did not get it, and I could not get any serum to vaccinate them for six or eight days after they took sick, and lost just two-thirds of them. My pigs weighed about 90 pounds and cost me $1.30 a head to vaccinate them with the single treatment. The old sows weighed about 300 pounds and cost $4.00 a head for vaccinating. This seems a little high to me and I would like to know what other parties are doing.—I. W. Everson, Harrison County, Iowa.

SPECIAL OFFERING
In First Class Percherons

Graunot 99669 (P. S. A.); weighs 1,590 lbs. at less than 18 months. Extremely heavy boned, best of feet, a true draft type, and should mature at not less than 2,200 pounds. Strongly brilliant bred and one of the best colts foaled in 1912.

Also a 4-year-old stallion weighing 2,150 pounds; a proven sire of good ones.

Also a dozen extra good brood mares, heavy in foal. Terms cash or bankable paper.

C. F. JONES,
Whitehall Farm Rippey, Iowa

SELLING OUT.

On account of rheumatism and lack of competent help, I have decided to sell my stallions and jack, a jennet and a span of black Percheron mares, registered.

Dapple grey imported Percheron; 7 years old; a ton horse today in work horse condition; can easily be made to weigh 2,200. Sound; a sure foal getter.

Six year old black imported Percheron, in fair condition, 1900 pounds. A show horse; sound; a sure foal getter.

Home bred black Percheron stallion; 3 years old; 1800 pounds. An exceptionally good one and a very sure foal getter; sound.

Black, two year old home bred stallion; 1750 pounds; a cracking good one; will make a ton horse; sound.

Roan imported Belgian stallion; 7 years old; a ton horse in condition; a sure foal getter and sound.

The jack is registered; black with white points; 9 years old; 925 pounds; 15 hands horse measure. The jennet is recorded 15.3 with weight better than 1,000 pounds. Will sell a man one or all these horses. Will give a 50 per cent breeding guarantee. If they are not as represented return them and I will refund purchase price. I might consider a trade for a good farm, not too far away, or for cattle.

THOMAS McNAMARA, BLOOMINGTON, WIS.

PERCHERON STALLIONS

IMPORTED AND HOME BRED.

To dissolve partnership we will sell two black imported stallions weighing 1850 and 2100 pounds; sound; sure foal getters. Priced to sell. Also have home bred stallions from weanlings to coming three year olds for $250 to $500. For particulars, address

C. B. DANNEN & SONS, :-: Marshalltown or Melbourne, Iowa

300 PERCHERONS

We have 50 suckers, both sexes; 100 yearlings, both sexes—Imported and Home Bred; 150 matured stallions and mares, from Two to Six Years.

We have the best mares and fillies we ever owned or ever saw. Our yearling stallions are of heavy bone and extra good quality. Our 2-year-old and matured stallions are not excelled by any barn in the United States. Our mares are bred to our best $3,000 stallions, Honorable and Jalape.

We have been in the horse business 39 years. Stock just as represented or we pay your expenses to look at them.

SINGMASTER & SONS, Keota, Iowa

Branch Barn Sioux City, Ia. **SINGMASTER & WALKER.**

IMPORTED PERCHERON STALLIONS

Each year I select 35 or 40 horses in France, so good and so correct in type, that any one of them will prove a great benefit to the man who buys it.

At the shows of the Southwest circuit, our horses won every championship and every group of five in 1913, as they have done most of the past five years. Our horses are handsome; our contract just and right; our insurance the best. Come and see me.

PERCHERON IMPORTING CO.,
CHAS. R. KIRK, Mgr. **South St. Joseph, Mo.**

GOOD WINDBREAK FOR PLAINS COUNTRY.

To the American Breeder: One of the best windbreaks for Western Kansas farms is a hedge of Chinese arbor vitae trees. For the protection of stock and to prevent evaporation of moisture this tree probably is the most satisfactory for the Western counties. C. A. Scott, state forester at the Kansas Agricultural College, urges the planting of more of this type of hedge in a recent circular just issued from the college.

Under favorable soil conditions these trees, which are evergreens, will grow 30 or 40 feet high in Western Kansas and will be 12 to 18 inches in diameter. In addition to being a serviceable tree, the arbor vitae is ornamental. Wherever these trees have been planted in Kansas they are making a successful growth, having withstood the climate of the last twenty years without serious injury. The state forester will send the circular to anyone applying and will be glad to give information about obtaining stock for planting.—Kansas Agricultural College.

STALLIONS AND JACKS

For sale. Three stallions and four jacks as I have decided to change my business. Any one wishing to buy such stock will make no mistake in visiting my barn. These jacks are all black with white points; good foot and ear; ages from three to eight years. They are all registered. Have mules to show their breeding.

One black imported Percheron; weighs 2000; age 5 years. One registered saddle horse; a chestnut sorrel; weighs 1150 pounds. One Standard bred bay horse; weighs 1200 pounds. They are all good lookers and good breeders. Address

W. E. GILMORE, Willard Mo., R. 3.

Percherons

For sale. One imported, nine years old; weighs 1850; black. Two coming three; black and grey; weight 1850 and 1800. Will make a ton each. Buy them of the farmer and breeder.

CHAS. E. WARREN,

G. B. Loper & Sons, Chesterfield, Ill.

SUCCESS IN HORSE BREEDING

(Continued from page 5.)

say that I am well pleased with the management of the school and the instruction received. The instructors all seem to be men of the highest moral character. This is the only school of its kind in the world and the breeder without its instruction is behind the times. This is a scientific age; science is just as great a boon to the breeder as it is to any other line of business.—H. L. Nighswonger, Alva, Okla.

Dec. 23, 1913.—I attended the Graham Scientific Breeding School a year ago and was well pleased with the way it is conducted. I think that every horseman should attend it, as there is a great deal of valuable information that a man can't get any other way. I would like to attend it again this winter. I wish you success with the Scientific Breeding School.—Wm. Cameron, Wilmot, S. D.

Dec. 23, 1913.—I can recommend the breeding school as it has been a winner for me. I attended the February, 1913 term, and can say that I have more than doubled my business, and what I have done is much better. I bred 185 mares to our imported Belgian stallion and have 130 mares which show safe in foal. I have bred as many as nine at one service and eight of them show safe in foal. Can say to any one in the breeding business that they cannot afford to miss the school. I want to attend at least once a year.—C. L. Crabtree, Laverne, Okla.

Dec. 22, 1913.—I have learned by experience that there are "tricks in all trades." I attended your November school to learn the trick in horse breeding. Your methods seem to be sane, honest and reliable.—E. S. Hamilton, Long Mont, Colo.

Dec. 23, 1913.—To follow up the different branches of my thoughts of the Graham School would take a volume. Scientific breeding is a deep lesson that is before the American Breeder. It has passed the experimental stage and that means it is here to stay. I first practiced scientific breeding two years ago and used it on my own mares, and a few customer's mares, with good results. Last year I continued the work, with about 80 per cent of my customers trying it this last season, 1913. I have found it a success and would not go through a season without the capsule system. Look over the subjects taught for $25 and a return privilege for life. The tuition ought to be $100. The breeders of America should not miss this opportunity. I expect to go back as soon as I can. I have a stud colt foaled May 15, 1913. He weighs 965 pounds in fair flesh at six months old. He is my first capsule colt.—I. C. Evans, Troy, Ia.

Dec. 18, 1913.—I certainly got the worth of my money and then some when I attended the Graham Scientific Breeding School. I think the school is up to date, strictly moral, a credit to its promoters and a blessing to the breeders. In one short term I learned more about scientific breeding than could be learned in a lifetime otherwise. The dissecting of a diseased mare is worth more to a breeder than four times the tuition fee. I consider it well worth any one's time to atend. Be sure to take your boy along, or send him alone; he will be in strictly moral company and well looked after—F. J. George, Esbon, Kans.

Dec. 20, 1913.—I attended the November term of the Graham Scientific Breeding School and think it was the best and the most I ever learned in six days. I think I got more for the money than I ever did. Could not place any valuation on what I learned. I am going to attend again. I can't say too much for the Graham Scientific Breeding School.—M. A. Harris, Saskawa, Okla.

Dec. 23, 1913.—I can't speak too highly of your school. I think every stallion owner or stock raiser will derive great benefit. I would not take $100 for what I got out of your school. Let the good work go on.—John Vought, Hampton, Ia.

Dec. 20, 1913.—I cannot say too much about the Graham Scientific Breeding School. I always had my doubts as to artificial breeding or capsule breeding, but now it is no mystery to me. Anyone that is interested in horse breeding should go and attend the Graham Scientific Breeding School and learn how to breed and learn the different conditions of mares, and then do as they teach. But learn first. I would not take

DUNHAMS PERCHERONS

are today, as for the past 50 years, the BEST, as shown conclusively at the fall fairs and International.

And all ready for service. These are for sale at reasonable prices. I have also for sale several younger stallions and some imported and American bred mares and fillies, all good.

MANUEL CROSS, **Adrian, Minn.**

MAPLEWOOD STUD OF PERCHERONS.

A choice selection of stallions and mares raised under practical farm conditions. Mares in foal to the champion Fortress and the 2200 pound imported, Kergolay. I have the 1800 pound serviceable stallions, 80 per cent breeders that will pay for themselves in one season.

C. G. ANDERSON, R. 5, Hector, Minn.

75-PERCHERONS-75

Thoroughly acclimated. Young; good colors and very high class.

CRANDALL & DANFORTH,
Randolph, Minn.

SIX FIRST CLASS PERCHERON STALLIONS

For sale: 1 nine-year-old black, wide and low; used him 6 years in my herd and is an extra breeder. I five-year-old gray, wire scar on one foot. Good, broke to work. 1 eleven-year-old black; imported. 1 extra good coming two-year-old. Choice of the above $600.

Also: 1 four-year-old black; 12½ inch bone, will make very large horse. One 5-year-old black; a nice ton horse. These two have extra quality, style and action. Choice of the two, $1,000.

H. L. HINCKLEY, M.D., Barnard, Kas.

PRICED TO SELL.

A dark iron gray three-year-old registered Percheron stallion; weighs now 1,800 and should mature at a ton. Extra heavy bone; well proportioned; a good server; gentle and broke to work. Sired by Minet 44897 (60963) and out of a $700 black 1900 pound mare; other colts to show her breeding.

If in the market for an extra good stallion at a breeder's price, call or write at once.

F. P. FREIDLINE, **Caney, Kans.**
Route 1. Bell Phone.

PERCHERON STALLION FOR SALE.

Imported; 16 hands high; can be made to weigh a ton; color black with stripe extending to nose. Can recommend him as a breeder. He has good bone, good action and good sense. All his colts are good ones. Price $1,000 if taken soon. Pedigree furnished with the horse.

CHAS. E. BALDWIN,
Ada, Kansas.

PURE BRED PERCHERON COLT.

For sale. Black Percheron stallion colt; 9 months old; weight 950 pounds; eligible to registry in P. S. A. Pedigree furnished. Sire and dam each weighed a ton and were prize winners at county fairs.

G. B. CHANDLER,
R. F. D. 1. **Buffalo, Kans.**
Four miles Southeast of Rose, Kas., on Missouri Pacific Railway.

PERCHERON STALLIONS.

A choice pair of two year olds; blacks; plenty of size and bone.

A. M. DULL & SON, Washington, Kas.

many times what it cost me. I expect to attend the January term.—M. B. Koffroth, Richmond, O.

Dec. 19, 1913.—From now until January 5 I intend to make an effort to get several of the young men to attend the next term of this school, for I believe every man should at least attend one term, whether he owns stallions or mares, because the teachings of this school can be put in every day practice. Will be present once every year if possible. Long live the Graham Scientific Breeding School, may it ever prosper.—Clarence W. Smith, Phillipsburg, Kans.

Dec. 20, 1913.—I would not take $500 for the knowledge gained at your school last August. Every man ought to know the facts you teach, whether he makes breeding a business or not. A breeder should know them or quit the business.—E. L. Watrous, El Paso, Texas.

Dec. 21, 1913.—I think your school is just what has been needed in this part of the country for years. I know that I would not part with what I learned at the November term for many times the amount it cost. It will pay any man that handles stock to attend this school.—R. I. Ishmael, Kiowa, Kans.

Dec. 23, 1913.—The Scientific Breeding School is O. K. and should be attended by all of us breeders. I aim to attend once or twice a year and catch all new features that may come out—Jesse B. Stamper, College Mound, Mo.

Dec. 23, 1913.—I am very well pleased with the school, and after knowing what I know now I wouldn't think of handling the breeding business without going to the breeding school one or more times. Before I went to the school I thought I knew it all about the breeding business, but after I went to the school I found out that I didn't know anything about the business, but now after attending the school I am capable of handling the business. There is no man that can be successful without attending this school.—L. B. Cantwell, Sterling, Kans.

Dec. 21, 1913.—I consider the money I spent in taking a course at your Scientific Breeding School well invested. I will attend another term in the near future. I really do not know of a better way for a breeder of live stock to invest the sum required than to attend a term. Especially is a horse breeder benefited even if he only raises a few colts each year.—Frank S. Richards, Odessa, Neb.

Dec. 21, 1913.—I think your breeding school is a grand thing. I have only been there one term, but if it is so I can, will be back there in January. I think it is money well spent, and you have the cleanest school I ever saw. The instructors are all fine men. Hoping the school success.—R. M. Goery, Oneta, Okla.

Dec. 20, 1913.—I was well pleased with the Graham Scientific Breeding School. It is the place to learn capsule breeding, and even if they didn't teach capsule breeding it is more than worth the time and money spent for the rest of the knowledge acquired there. I have not had a chance to use the capsules yet but it has been tried here and found satisfactory.—F. C. Griffin, Gardner, Kans.

Dec. 17, 1913.—I was a student at the Graham Scientific Breeding School last year and I can't thank Mr. Graham enough for what I learned—Julius Lebantschnig, New Douglas, Ill.

Dec. 19, 1913.—I attended the February, 1913, term of the Graham Scientific Breeding School. No breeder can afford to miss what can be learned at this school, not only financially but morally. I expect to return to school whenever I can.—G. H. Miller, Bluffton, Mo.

Dec. 18, 1913.—I think the Graham Scientific Breeding School is all right. Every man that raises stock ought to attend, especially men in the breeding business. It is an educational school as well as a moral one. No father or mother need be afraid to send their boys there, for it is a clean,

BELGIAN EMPORIUM OF AMERICA

Largest collection of Belgian draft horses on earth. Also 20 choice Percheron stallions. The fall importation of 100 head, the second importation for 1913 swells the number on hand to 175 stallions, mares and colts. Many prize winners; many descendants of prize winners. All choice animals. We are farmers and stock breeders; twenty-eighth year in the Belgian horse business. Each year adds to our strength, and now we can defy competition in quality, quantity and prices.

Four farms, all adjoining; 7 large barns.
Write for free illustrated catalogue.

H. LEFEBURE & SONS, Fairfax, Linn Co., Ia.
(Eight Miles from Cedar Rapids.)

BLUE VALLEY STOCK FARM

Largest Importers and Breeders of High Class Belgian Draft Horses in the West. Importation of Belgian stallions and mares arrived September 7th. Many of our horses were medal-winners at the foreign shows this year, all are sound, acclimated and ready for service. Lowest prices and safest guarantee of any firm in the business.

Also a few extra good Percherons. Write us, always mentioning the American Breeder.

W. H. BAYLESS & CO. **Blue Mound, Linn County, Kans.**

WE ARE IMPORTERS
of the best blood of Europe in
BELGIAN AND PERCHERON
STALLIONS AND MARES

Importation made regularly and a large selection kept on hand in season. Only horses of **high quality** handled. Prices and terms **right.** It will pay you to see our horses before buying. Favorable terms to responsible dealers. Our 1914 calendar is now ready for distribution. Write for full particulars.

W. A. LANG & CO.,
Greeley, Delaware County, Iowa

IRVINEDALE FARMS

BELGIANS AND PERCHERONS, THE BIG, DRAFTY KIND.

ANNUAL PUBLIC SALE, STALLIONS AND MARES, FEB. 19.

Forty head stallions and mares—a good useful lot. Stallions 2100 to 2350 pounds at maturity. Prices $300 and higher, according to quality. An extra good 2-year-old Percheron, fit to head a pure bred stud. All sound and sure breeders. Mares will weigh 1900 to 2200 lbs. in show condition. Price $250 to $800.

Terms cash or bankable paper. We will pay expenses to any one that does not find stock as represented. Inspection invited. Farm at Ankeny, 10 miles north of Des Moines on C. & N. W. R. R. and Ft. Dodge, D. M. & Southern Interurban. Will meet trains if notified. **CHAS. IRVINE, ANKENY, IOWA.**

OPENING FOR A BREEDER.

I will make a good proposition to any graduate of the Graham Horse Breeding School who wants to go into the breeding business. I have a registered Belgian stallion and a 1100 pound jack and breeding barn and pens. I will sell horse and jack and rent barn, or I will sell to some one that understands the breeding business, and he can pay me half what he makes off the stock until paid. I have no time to look after them and they cost—the jack $1,300 and the horse $1,600, so you see the first cost is $2,900, and it will not do to have any but a qualified man to look after them, for I think I have too much in them to risk.

Come and see the location and the animals; that is the only way to know what this proposition is worth.

J. L. KILPATRICK, WHITEWATER, KANSAS.

STALLIONS AND JACKS

For sale or trade. Two imported Belgian stallions; weight 2100 and 2240; sound and right and two jacks coming 3 and 4 years; black with white points; good ones. Also 5 jennets from one to 12 years old; black with white points. Will trade for other stock or good land in good farming country, Iowa preferred. Lay this paper down now and write or come if you want something good.

J. I. WILLIAMS, **Winthrop, Iowa.**

REGISTERED BELGIAN STALLIONS.

From one to three years old; from imported sires and dams. Good ones. Also one 6-year-old imported Belgian Stallion, weight 2,000 lbs. A prize winner; sound and good foal getter. Lots of colts to show. Will price them right. No trade.

E. A. SILVERTHORN,
Rossville, Ind. **Route 1.**

IMPORTED BELGIAN STALLION

for sale. Color bay; age 6; weight 2250; sound and right in every way and a sure foal getter. Lots of colts to show. A boy can handle him. A real drafter; the wide out kind; good quality; size and bone. Reason for selling, want to quit the business. Will sell at a bargain for cash.

FRED EGGIMANN, **Annawan, Ill.**

CLOSING OUT SALE.

Two imported Belgian stallions, 6 years old; bay; 2000 and 2100 pounds; one imported Percheron stallion, 11 years old; black. One home bred Percheron stallion 2 years old; black-grey. Also some registered fillies. These horses are all sound and priced to sell.

HATTEBERG BROS., R. 4, Paxton, Ill.

moral school; there cannot be too much said in its favor. I have attended two terms and am well pleased with what I have learned and can learn something more at every term I attend. May the school live and prosper with the good work it is doing.—J. A. Swearingen, Breckenridge, Okla.

Nov. 12, 1913.—I have never regretted the time and money it cost while I attended your school three terms, and I will also say that it will pay any man that deals in stock to take a course at the Scientific Breeding School, and then apply what they learned at home; they will get 100 per cent returns in six months. The most we have to contend with now is the "stud hoss" man who either can't or won't try to post up on these things. It is eliminating the grade

SIZER'S SHIRES

Stallions and Mares for Sale.
All ages—the Get of
TATTON CHIEF 8605 (20087)
The sire of more prize winners than any other Shire horse in America.

L.N. and O.B. Sizer, Fisher, Champaign County, Ill.

RECORDED SHIRE STALLION FOR SALE

Seven years old; weighing over a ton; very gentle; proven an 80 per cent foal getter. Must sell on account of his colts. Price $750 if taken soon. Also a stud colt; fillies of all ages and mares in foal. Must sell for cash or bankable note. Will not consider a trade at all.

B. M. Boyer & Sons, Farmington, Iowa

SHIRE STALLION
For Sale or Trade

Five years old; weighs right at a ton; dark seal brown. Am going to quit the business. Address
G. E. UEHRAN, Atlantic, Iowa.

REGISTERED SHIRE STALLION

For sale or trade. Jupiter 11230; 4 years old; weight 1900 pounds. Bred 60 per cent last year.
DR. G. C. DUNHAM, Kempton, Ind.

CLYDESDALE STALLIONS—Four coming 3 year olds. All big fellows with plenty of weight and quality. Also one fine black jack, two years old, for sale. **JOHN H. CHAMBERS, EDINBURG, JOHNSON COUNTY, INDIANA.**

CLYDESDALE HORSES

Stallions and mares of all ages for sale.
Also Shorthorn Cattle.

W. A. DeMerritt
Route 2, Plainfield, Ill.

CLYDESDALE STALLION

For sale. Six years old; weight 1850 pounds. Good breeder. Fillies in the way.

Five black jacks for sale; the big kind; from 15½ to 16 hands; black with white points; from one year old to six.

Also 5 spring bull calves (Herefords). All in good condition.
J. R. BROOKS, Cairo, Mo.

Clydesdales

Fore Sale—Stallions, yearlings and up; mares and fillies, among them the International prize winner, Bruce Meeker, 2 years old last season. He was used by the Ohio State University for demonstration work.
R. C. McMILLAN,
Hebron, Indiana.

Suffolk Punch Horses

We have imported stallions and mares and also home bred stallions from weanlings to two year olds. All for sale at very low prices, as we are overstocked. Correspondence solicited.
G. A. Hamilton & Son, Loveland, Colo.

horse and the barren mares very fast in this country.—F. J. Goodrich, Scottsville, Kans.

Sept. 26, 1913.—My salary has always been $65 to $75 a month and board. I attended one term of the Graham Scientific Breeding School and had it raised to $100 a month and board. Do you think the school will ever close when a man can do as good as that in one term? I do not. —Wm. Briggs, Kenmare, N. D.

Dec. 19, 1913.—Although I am not a breeder, I attended the Graham Scientific Breeding School in order that I might have a better understanding of the business of the breeders by whom I am employed as secretary of the Standard Jack and Jennet Registry of America. I sincerely believe that, as a result of the information gained by attending the school, I could make a better success as a practical breeder today, if I were to go into the business, than the man who has been a breeder for years but who has not attended this school. Aside from the valuable information that is imparted to the students, in every line that can possibly affect their business, by the best informed men in these lines in the world, I was strongly impressed with the high moral tone of the school and the safeguards thrown around the clean young men who attended. It is impossible to predict the extent of good that this school is destined to accomplish, both financially and morally. Every American should be proud that his country has the honor of having produced such an agency—the first and only school of the kind in the world. No breeder should fail to take advantage of the opportunity to attend and by so doing acquire information that will enable him not only to treble or quadruple the profits from his business without investing additional capital, but will also make of him an agent for upbuilding of his community.—William E. Morton, Kansas City, Mo.

Dec. 19, 1913.—I am more than pleased with the Scientific Breeding School, and would say to the horse and cattle men of the country, you will make a mistake if you don't take a week off and attend the school, for you cannot get the information any place else that you get there. I attended the August term and am going to go back in January, as all students hold a life membership.—A. W. Johnston, St. Charles, Iowa.

Dec. 19, 1913.—The Graham Scientific Breeding School is a great thing for the stallion and jack owner. It gives instructions that a man cannot get at any other place. If a man will put its teachings into practice, it will be a great benefit to himself and neighbors. The only regret I have is that I did not attend it sooner. Any one with a few mares cannot spend $25 that will do him more good. I intend to be with you once more between now and spring.—H. M. Wible, Hazelton, Kans.

Dec. 19, 1913.—I attended the Scientific Breeding School in August and will be with you again at the January term if sickness does not prevent. Will say a word to the older breeders; if you can't spare the time from home to attend the school, send some of your boys. It will be money well spent. They will be well taken care of. Success to the Scientific Breeding School.—W. W. Fightmaster, Bradshaw, Nebr.

Dec. 20, 1913.—I am so well pleased with the instructions received at the Graham Scientific Breeding School that I feel that every state should pass a law compelling every stallion owner to be a "qualified" (note the word "qualified") graduate of this school, then require him to attend one term not less frequently than every two years. For me this school touches just the right spot.—W. C. Moore, Parsons, Kans.

Dec. 27, 1913.—I was well pleased with the way the school was conducted, both morally and scientifically. I think it well worth the time and money spent, and I want to attend one term each year.—Edwin Richs, Kiowa, Kans.

Dec. 29, 1913.—I was well pleased with the Graham Scientific Breeding School and I think it would pay every breeder, whether they are stallion owners or not, to attend. I would like to be with you next week.—G. S. Shaklee, Corbin, Kans.

Dec. 29, 1913.—I attended the Graham Scientific Breeding School in November last and was very favorably impressed with the work, so much so that I am going to attend the January term. I think it would be time and money well spent for any stockman to attend the school. He will get some information that he will not get elsewhere.—W. H. Bayless, Blue Mound, Kans.

Dec. 22, 1913.—The world moves, and man, the type, lives on. Through the ages opportunity has knocked. One of these stray opportunities was seized and collared by Mr. Graham, and today he stands forth as the founder of the Graham Scientific Breeding School. Not only has this scientific school lifted the veil of ignorance from hundreds concerning the sexology of dumb animals, but it is in one way a reform school for a wandering and evil thinking mind, in one who hasn't the backbone and human mind to stand up and look the passions of evil in the face and refuse. Whatever it has done for both man and beast, it can do much more. Parents, do not hesitate for fear your sons will be led astray if you send them there; they are as carefully seen after as if they were at home. And another thing, they will go away better young men than they were before, and I think hundreds of other fellow students will agree with me that the "Graham Scientific Breeding School" will stand the test of ages for moral and social uplifting.—Clarence Altum, Lebanon, Ind.—Adv.

ANOTHER POINTER FOR "MONTANA MAN."

To the American Breeder: It is amusing to an old breeder to note the questions asked in the Breeder in regard to buying a stallion, and also the kind to cross on different mares.

It looks to a man "up a tree" as if some of the men that want to get in the breeding game had better spend the first one hundred dollars in getting posted, as the country is full of men of no principle, who make is their business to get hold of the inexperienced man and "do" him if they can. In this day and age we have breeders and men of integrity that are willing to give their experience to the press when asked for,

REGISTERED MORGAN STALLIONS AND BLACK JACK FOR SALE.

Bishop Monmore, chestnut, sired by Monmore; dam by Archbishop, etc. This is a handsome show horse and sire. He has always been a popular horse in the stud and will please any class of breeders wanting a high class Morgan stallion; 15¼ hands and 1,000 pounds. Price $500.

Major Monmore, chestnut; sired by Monmore; dam by Vivace. This is a highly bred and handsome Morgan and a very popular sire. His colts are pleasing their owners and they will satisfy any class of breeders of fancy drivers and general purpose horses. Price, $400.

Storm Cloud, chestnut; sired by the great horse, Vivace; dam by Nimbus, son of Ben Franklin. This is a coming four year old and a good one. He is inbred to Ethan Allen. His full brother won nine blue ribbons in nine shows—was never defeated. Price, $400.

Barney 2d, black jack, white points; 13½ hands and very heavy made. A good performer and a great sire of large, smooth, heavy mules. While this is not a big jack he is a better breeder than most big ones and he is a gift at the price of $250.

This stock is for sale, not for trade. I am leaving the farm and cannot use other stock. Except for this they would not be for sale.
CHARLES BECK, CHESTERFIELD, MO.

Registered Morgans

My Morgans are large; 15 to 16 hands and 1050 to 1300 pounds; have clean, heavy bone and possess all of the style and endurance for which the breed is noted.

Having bought Headlight Morgan to head a selected stud of The Admiral mares, The Admiral is now for sale. He is 15¾ hands high; weight 1250 pounds, and is the greatest all-round horse I know. I have 200 of his get on the place; part of them for sale.
RICHARD SELLMAN
ROCHELLE, TEXAS

HAMBLETONIAN STALLION

for sale or trade. He is a bay; 16 hands; good bone; 9 years old; good disposition; works anywhere. Must get rid of him on account of his fillies. He weighs about 1400 when fat. Plenty of colts to show. This horse's sire is a pedigreed Hambletonian and his dam is a grade mare. Would trade for a heavy horse, 5 or 6 years old and weighing from 1800 to 2000 lbs.
WILLIAM E. RHODES,
O'Fallon, St. Charles Co., Mo. Rte. 1.

FOR SALE OR TRADE

Registered Hambletonian stallion; 7 years old; sound; weight 1100; family broke; black jack; 5 years old; 60 inches high; weight 800; right in every way; one extra good black jack with white points; coming 2 years old. Also 151 acres of land in Anderson County, Kansas, close to Garnett. Want good, young, registered Shire stallion. What have you?
W. E. McKEE, Braddyville, Iowa.

ARABIAN STALLION FOR SALE.

Color bay and white; 6 years; 16 hands; weighs 1000 pounds. Excellent breeder; sure foal getter; two-thirds of his colts spotted. Perfectly gentle and broke in all harness. Price, $400. Reason for selling, am quitting the business. **E. J. MUNTER,**
Vandalia, Fayette County, Ill. Rte. 3.

For Sale

Kentucky stallions and jacks. Some of the best ever offered.

Registered Saddlers, Trotters and Percherons.

Prices reasonable. All stock guaranteed sound, and good breeders.
KENTUCKY SALE CO., W. H. McMurray, Mgr., Fort Smith, Ark.

SADDLE STALLION

For sale. Alfonso 1927; five gaited; fast at rack and trot; good in harness; good breeder and sure foal getter; sound. Will sell at a bargain. Also two coming two years of Chief Strain.
G. H. Hennemann, Elmont, Mo. R.R. 1.

SADDLERS FOR SALE.

Registered stallions and mares; all ages. Also a few Hereford bulls.
H. A. GREENWELL, Lakenan, Mo.

EXCELSIOR SHETLAND PONY FARM.

Registered and High Grade Ponies for sale. **W. H. Fulcomer, Belleville, Republic County, Kansas.**

FOR SALE OR TRADE

My black and white spotted Arabian stallion; weight 1170 pounds; family broke, single and double; fine disposition and a gaited stallion. I have owned him seven years and he has proven himself a good breeder and a sure foal getter. Will trade for a black jack not over 10 years old; 15½ hands high, or higher, and must weigh 1,000 pounds or more. Must be sound; prompt and quick to serve mares and a reasonable foal getter. If you have something of this kind to trade, get busy. I mean business.
J. C. STEGMAN,
Clifton, Washington Co., Kans.

and the new beginner would be able to profit by it.

The Montana Subscriber would do well to buy a registered saddle stallion or a registered Morgan stallion to cross on mares of 800 to 1,000 pounds, and raise government mounts. I take this stand in the matter, as he seems to be looking for more bone. If his mares are light boned, there is grave fault and it would be a still worse one to cross a Percheron on such mares. He had better buy a jack and raise mules than that. I would advise him to sell these mares and buy a few pure bred ones and start right with less number than to take the chances in grading up this bunch of mares. As Davey Crockett says, "Be sure you are right, then go ahead." All the tractors, motor cars and other machinery have not and never will completely take the place of the faithful farm horses. These horses enrich the farms in fertility and cultivate the crops at the same time. No power invented yet by man takes the place of the horse. —E. A. Rickard, Ashtabula County, Ohio.

BREEDING IN WEST VIRGINIA.

To The American Breeder:—There are not many imported stallions here, due partly to the fact that there are so many inferior ones that stand at such a low price that an imported or pure bred stallion does not get enough mares to even pay for himself. There are two imported stallions in our neighborhood; one a Percheron and one a Shire. Neither of them are very sure foal getters, and I think it is partly because they are "traveled to death." They make a 30-mile trip every two weeks, all through the breeding season, and I expect if the figures were shown they bring their owners out in debt every season.

But to show the American Breeder folks that we personally appreciate good blood, will say that we have colts from both of these horses on our farm.

We have no stallion law in this state except that if the service fee is not paid before the colt is six months old, the colt may be sold to pay it. Stallions in this country are always stood on the stand and suck plan, as farmers will not breed any other way.

We had a county fair this season which was our first attempt at anything of the kind, and we made a very creditable showing.—Rembrandt Morgan, Putnam County, West Virginia.

PUTS BLAME WHERE IT BELONGS

To the American Breeder:—In my opinion the Mare Owner Editions is one of the best investments we stallion owners can make and I would be sorry to see the American Breeder discontinue them. They are the very best advertising for capsule breeders. They educate ones customers, they wake up and take interest in the breeding of their mares and don't lay all the fault on the stallion for their mare not settling, and I know they have put out lots of old "fogy" notions about breeding for several of my customers. I believe in sending them to all my customers and prospective customers. It's by far the cheapest advertising I can get. Wishing the American Breeder success.—A. T. McLarty, Ramsey County, N. Dak.

CAMERA REPORTS OF STATE FAIRS.

To the American Breeder: I certainly was delighted to have copies of the American Breeder and the cuts are splendid. I would like to ask if it would be possible for us to secure one or two photographs of each one of these cuts from you? You have adopted a very novel way of reporting the state fairs, and I do not see how it could be improved upon.—John T. Stinson, Pettis County, Mo.

The Johnson-Slocum Co., "Indestructible Collars" gives satisfaction. Read this letter from a user: "The Adjustable Hameless Collars I bought of you I am well pleased with. The horses work with more ease and comfort than with old leather collars." H. E. Ashley, Horsefoot, Neb.

Fred Eggimann, of Annawan, Ill., is advertising his imported Belgian stallion for sale at a bargain, as he is going to quit the business.

C. B. Dannen & Sons, of Marshalltown and Melbourne, Ia., are offering two imported Percheron stallions and some home bred stallions for sale at reasonable prices, as they want to dissolve partnership.

C. Michel, Leslie, Mo., wants to trade an equity of $2,250 in a $3,000 stock of merchandise for live stock. Read the ad.

Kentucky Sale Co., Fort Smith, Ark., are advertising stallions, jacks, saddlers, trotters and Percherons for sale at reasonable prices. Any one in the market for stock of this kind should not fail to read their ad in this issue and then write for full information.

J. B. Whitaker, Forest City, Ill., is advertising two Percheron stallions and some mares for sale.

Crandall & Danforth, of Randolph, Minn., have 75 Percherons for sale, young, good colors and very high class. Any one in the market should not fail to get their prices on this stock.

Bradley Bros., Warrensburg, Mo., have 100 jacks and jennets for sale. Their jacks are the big Mammoth, big boned kind and mostly raised by themselves. Every animal guaranteed as represented. Dont' fail to get their prices on this stock if in the market.

W. E. Gilmore, of Willard, Mo., is advertising three stallions and four jacks for sale at reasonable prices, as he is changing business. Don't fail to look up the ad.

L. P. Taylor, West Liberty, O., is advertising 160 acres of land in Texas, for sale or trade for young stock, mules preferred. Read the ad.

L. C. Berry, Eldorado, Okla., has an eight-acre tract of land for sale at a reasonable price. Mr. Berry says this is a fine location for a breeding establishment. See the ad and write him for further information.

Julius Lebantschnig, New Douglas, Ill., is advertising jacks and stallions for sale in this issue at a bargain price if taken soon. See the ad.

Scott & Abney, Virden, Ill., start their regular ad in this issue. They have mules and jacks for sale at reasonable prices. Anyone in the market for stock of this sort should not fail to write them for full information about their stock.

Amos Hanson, Collins, Ia., has a Percheron mare for sale cheap. Write him for particulars.

J. A. Black, Brookville, Ind., has a registered Percheron stallion for sale, or would trade for registered mare. Read the ad.

J. C. Stegman, Clifton, Kas., wants to sell or trade his spotted Arabian stallion for a black jack. Look up the ad.

Dr. G. C. Dunham, Kempton, Ind., is offering his registered Shire stallion, Jupiter, for sale or trade. His ad is in this issue.

C. G. Anderson, of Hector, Minn., has a choice selection of Percheron stallions and mares for sale. Write him for particulars.

Cook & Brown, Lexington, Ky., have 200 head of jacks, Percheron stallions, mares, saddle and plantation horses for sale at prices to suit everybody. Write them.

Ben M. Green of Cape Girardeau, Mo., is advertising in this issue ten jacks from two to five years old for sale.

S. W. Jetton & Co., Murfreesboro, Tenn., have 22 jacks, 12 jennets in foal and some fine saddle stallions for sale at the right kind of prices.

H. E. Brades of Long Point, Ill., is advertising in this issue a team of registered French draft mares, eight years old, for sale.

G. E. Uehran of Atlantic, Ia., has a five year old Shire stallion for sale, or trade. See the ad.

J. R. Brooks, Cairo, Mo., has a Clydesdale stallion, five jacks and five Hereford bull calves for sale. Read his ad in this issue.

C. M. Harbison, Goliad, Tex., would like to trade a registered black jack for black jennet or weanling stud colt. Lood up the ad.

L. M. Tuck, Morrisville, Mo., is advertising two jacks and a Percheron stallion for sale, on account of ill health. The ad appears in this issue.

Dierling & Otto, Queen City, Mo., start their ad in this issue. They have 40 head of black Mammoth jacks and 25 jennets, also Percherons, Saddle, Coach and Trotting horses for sale, including their 1913 prize winners. They invite correspondence and inspection of their stock.

W. A. Lang & Company, Greeley, Ia., start their regular ad in this issue. They are importers of Belgian and Percheron stallions and mares of high quality. Write for their 1914 calendar and full particulars about their stock.

J. M. Outhouse of Patoka, Ill., is advertising nine Mammoth jacks for sale and two registered French draft stallions. See the ad.

Joseph Rousselie & Sons of Seward, Nebr., write: "The black yearling imported Percheron, Mistrall, weighs 1750, not fat, and it is said by experts that he will weigh a ton by two years old if in fair condition. He is 12 inches below the hock in the smallest place. The yearling Shire weighs 1600, not fat, and will weigh easy 1800 at two years old in fair condition. He was junior champion of the Nebraska State Fair."

Fisher & Walker, Evansville, Ind., start their ad of Percheron horses, Standard bred horses and Tennessee and Kentucky jacks in this issue. Don't fail to write them if in the market for stock of this kind.

R. M. Johnson, Bolivar, Mo., has 25 jacks and jennets left that he is advertising for sale. This is all first class stock and priced to sell. Write him for particulars.

Belgian herd horse, as he cannot keep him longer on account of his fillies. See his ad.

Thos. McNamara of Bloomington, Wis., is selling out his stock of stallions, jacks and jennets, or will trade for a good farm, or for cattle. Read the ad in this issue; it gives a good description of his stock.

William E. Rhodes of O'Fallon, Mo., has a Hambletonian stallion for sale or trade for a heavy horse. Look up the ad.

S. Metz & Sons of Homewood, Ill., start their regular ad in this issue. They have Percherons, Belgians and Shires at prices to sell. Any one in the market for stock of this kind should not fail to get their prices.

J. I. Williams of Winthrop, Iowa, has two Belgian stallions and two jacks for sale or trade, also five jennets for sale or trade for good land in farming country. See the ad and write for further information.

W. E. McKee, Braddyville, Iowa, is advertising a registered Hambletonian stallion for sale, or trade for Shire stallion. Read his ad.

Geo. Eggert of Newton, Iowa, writes: "I returned from Europe on December 17 with a new importation of stallions of the different breeds, Percherons, Belgians and Shires." Mr. Eggert is one of our regular advertisers and any one in the market for stallions of either of these breeds would do well to get his prices.

Taylor & Jones, Williamsville, Ill., write: "Upon investigation we find we have had the best lot of sales this fall we have ever had up to this date since we began importing draft stallions. We are making special prices just now in order to make room for our new importation to arrive soon, and many have taken advantage of this and are buying early. We still have a nice lot of Percherons, Belgians and Shires, and those who are in the market for any of these breeds, will be pleased with what we have to show you and the prices will be very low. Yesterday (in addition to the five sales we reported the week before), we sold a good, American bred 2-year-old draft colt to go to E. H. Kennard, of Wabash Co., Illinois."

Trumans' Pioneer Stud Farm, Bushnell, Ill., writes: We are very pleased to report that our horses are in fine condition since their return from the International Show and after going through our various stables, I have come to the conclusion that never during our many years in the importing business have we had, taking them all round, as good a collection of Shire, Percheron, Belgian and Suffolk stallions as we have at the present time. To anyone wishing to purchase a strictly high class draft stallion, will say they will be very hard to please if they cannot find what they require here and they are priced where they can afford to own them. Since the International, our trade has been very fair and among the most important sales is the Imported two-year-old Shire stallion, Aylesford Menestrel to Captain W. C. Bostwick of Mt. Sterling, Ohio, to head his pure bred stud. Messrs. Love & Son of Mercer County, Illinois, selected a high-class imported Percheron to head their stud of pure breds. Messrs. Stoops Brothers of Indiana, purchased an imported grey Shire stallion and our old customer, Martin Swift, an imported road Shire stallion, to head his stud of pure bred mares. He also purchased two American bred Shire stallions and a pair of registered Shire fillies. C. L. McLaughlin of Guthrie County, Iowa, selected an imported Percheron stallion. We understand he has a very fine stud. Our 1914 catalogue is at present time in the printers' hands and will be ready for distribution within the next few days. We shall be very pleased to mail same to anyone interested in strictly high-class draft horses."

Bradley Bros., of Warrensburg, Mo., are of a family of jack and mule raisers, and their ancestors were not only pioneers in this business, but were the very earliest settlers of their country. The present firm of Bradley Bros. have been in the business at Warrensburg for 10 years, handling stock of only such quality as has enabled them to exhibit prize winning young stock in the strongest shows of the land. T. L. Bradley of the firm, is a director in the Standard Jack and Jennet Registry of America, and states that in ten years they have never had a customer to complain or sold a jack that would not sell again. Their herd numbers 100 head and in service they have two of the best jacks in the state. Bradley King Giant, 16¼ standard; weight 1200 pounds and Bradley Sunlight, a sire of note. See their advertisement in this paper and then make it a point to see their stock.

J. P. & M. H. Malone, Kans., write of the stock they are advertising for sale in this paper: "Our stock is all looking fine. We made a good stand last year. Our crop of colts was never better, and our prospect for a good crop next spring is very good. The stallions and jacks we have for sale are the best we have ever offered. They are heavy bodied, good heavy bone, straight legs and the best of feet." Any one in the market for stock of this kind would do well to write them.

John Peck of Lexington, Ill., is advertising 25 head of imported and American bred Percheron stallions and mares. The ad appears in this issue.

The Breeders' sale at Bloomington, Illinois, January 27 to 30, inclusive, is contributed to by many of the leading horse growers of the rich section surrounding Bloomington. For catalogues address C. W. Hurt, Manager, Arrowsmith, Illinois, and always mention the American Breeder.

O. L. Thisler & Sons, Chapman, Kas., can supply Western breeders with Percheron stallions and jacks to advantage. They keep a good stock of acclimated animals on hands.

Henry Lefebure & Sons, Fairfax, Ia., are proprietors of what is widely known as the "Belgian Emporium of America." Send for their catalogue and mention the American Breeder.

Chas. Irvine, Ankeny, Ia., will hold his annual public sale of stallions and mares, February 19. Mr. Irvine has a separate stock of Percherons and Belgians on hands at all times and visitors now cannot only buy, but they can inspect the reserved sale stock as well.

C. F. Jones, Rippey, Ia., makes a special offering in an outstanding young Percheron stallion. Look up his ad.

F. P. Burnap, 107 West Tenth Street, Kansas City, Mo., whose fine farm is nine miles east of Kansas City, is the home of a superior collection of Percherons, begins advertising in this issue. Mares and fillies of the highest type are offered for sale. All old enough are bred to Glacis, the herd stallion pictured in the advertisement. Mention the American Breeder when writing Mr. Burnap.

The Aniser Harness Mfg. Co., of St. Joseph, Mo., specializes in harness, saddles, buggies, laprobes, horse blankets, etc. Be sure to get their catalogue, addressing Department 14W, and mention the American Breeder.

The Ottawa, Mfg. Co., Ottawa, Kas., who sold fence last year to hundreds of our subscribers, starts its fence advertisement again with this issue. Here's the place to get fence satisfaction. Write them at once for catalogue mentioning the American Breeder.

Prof. Jesse Beery, Box 13, Pleasant Hill, Ohio, starts again this issue, with his series of interesting and attractive advertisements. Many of our readers have attended Mr. Beery's Horse Training School with satisfaction and profit.

C. W. Lamar & Co., Salina, Kans., hold their public sale of Percheron stallions and mares, January 8, at their farm adjoining Bridgeport, south of Salina. Special trains from Salina to sale and back.

J. Crouch & Son, Lafayette, Indiana, every year reinforce their right to be known as one of America's leading draft horse establishments, by important winnings and high class exhibits at the leading shows.

The Dunhams, Wayne, Ill., enjoy the distinction of having been leaders in first winning for Percherons their widespread popularity in the United States. A great collection of Percherons always on hands.

I. N. Green of Kiowa, Kans., holds a big public sale at his farm January 29. A desirable lot of jacks, jennets, fillies, horses and cattle will be sold. Write him at once for catalogue and mention the American breeder.

C. A. Randolph, Fowler, Ind., makes a dispersion sale of his registered Percherons on January 30. Fifty head of horses will be sold including six prize winning stallions shown at the Ohio and Indiana State Fairs, 20 imported mares and six American bred mares and 18 weanling colts. Read Mr. Randolph's advertisement and send for catalogue at once, mentioning the American Breeder.

The Breeders' Harness and Whip Co., 1204 Central St., Kansas City, Mo., begins advertising three of its specialties in this issue; the Humane Horse Collar, two leaders in whips and the already well known Conqueror Stallion Bridle. Look up the advertisement.

The S. R. Feil Co., Dept. AB, Cleveland, Ohio, advertises a proposition in this issue which interests any live stock owner. His company offers to send Sal-Vet on 60 days' trial and cancel all charges for the same if it does not do as represented. Read the advertisement and mention the American Breeder when writing.

The Farmer's Wife is the name of the most widely circulated papers in the United States. It is published at St. Paul, Minnesota, and has an advertisement on the back cover of this issue. We ask all who are interested to mention the American Breeder in answering this advertisement.

Lee Bros., Harveyville, Kas., hold their annual public sale of Percheron stallions and mares January 27. The sale will be held at the Agricultural College Sale Pavilion, Manhattan, Kas.

This sale will be one of the most important held in the country this year as the offering includes all of Lee Bros.' 1913 prize winners. In addition there will be a number of young things sired by Scipion, Lee Bros.' champion herd stallion, and the mares in the offering are bred to Scipion. Send at once for catalog mentioning the American Breeder.

WHO HAS FED COOKED CORN OR WHEAT?

To the American Breeder:—I read an article in the November 20th issue about feeding wheat and corn. I have been feeding ground wheat and corn for about three months to my work horses and breeding stock and find it good. Don't grind the wheat fine; they like it better coarse. I would like to have some opinions about cooking corn and wheat for breeding stock this winter, and following on through the breeding season. Also which is the best hay to feed, alfalfa, clover or timothy. I have two jacks and three stallions.—I. S. Owen, Jefferson County, Kansas.

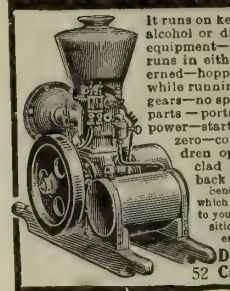
JAMES HOUCHIN'S $100 SILO; HE HAS EIGHT.

To the American Breeder:—I used to think there was something mysterious about a silo. Manufacturers had fostered this idea in order to make people believe they must send to a factory for a silo if they expected to get one that would be worth anything. It is all wrong. There is no more mystery about a silo than there is about a kraut barrel. In fact, the principle is just the same. Most any man who is handy with tools can build one that will last for years. I have planned one that can be built for $100.00. It holds 100 tons. I know it is a good one because I have put it to a thorough test. The dimensions are 16x24 feet. Use ordinary tongue and groove flooring material and line the inside with three-ply paper and encircle the outside with half inch rods or hoops two feet apart. Ordinary telegraph wire will serve for guying. Make the door frame of two-inch material and groove it for the insertion of slats as the Silo is filled. Line the door with a curtain of paper, just as you do for the main Silo. When you stop to think that forty per cent of the corn crop goes to waste when the stalks are left in the field you will realize the tremendous loss your country suffers from lack of silos."—Jas. Houchin, Cole County, Mo.

Editors Note:—From the Monroe County Appeal of Missouri, we learn that Mr. Houchin has eight silos on his farm.

TUBERCULOUS COWS NEAR A CONDENSING PLANT.

Live Stock Commissioner Graybill of Kansas has lately been investigating the herds of dairy cattle around Mulvane, Kas., at which point there is a plant for putting up evaporated or condensed milk. It is reported that 38 cows were found which reacted to the tuberculin test. Under the state law these are destroyed and the county reimburses the owners for half the amount of their loss.



To the American Breeder:—I think your Mare Owner Editions a good thing. It helps to educate your customers and helps to get them out of their old "fogy" ideas, and induces them to keep a better grade of breeding stock. It is a good advertisement and does the business.—A. J. Mills, Adams County, Neb.

I will give you a pig if you are not satisfied

My big type Poland China boars are sired by Cox's Wonder, by Rude's Giant and out of a Long King sow and by A. Model, grand champion of Iowa, 1912, and others. I sell at farmers' prices. Write me.

B. F. MARMION FARMINGTON, IOWA.

Four young Hereford cows and calves and three Hereford bulls, 2 to 4 years old. All registered and in fine condition. Can use youngsters of the draft kind; registered. Fillies preferred.

S. L. OVERHOLSER,
Glenham, South Dakota.

Make Money With Poultry

AMERICAN POULTRY is a magazine devoted entirely to helping earnest men and women make a financial success of poultry raising. Its staff of writers is composed entirely of those who have made a practical, instead of theoretical, success of poultry farming, and who are glad to pass on the results of their hard earned experience to AMERICAN POULTRY readers.

There are many pit-falls in the path of the novice which may be entirely avoided by those who will follow the teachings set forth in this magazine. It fully explains how to make a start, how to construct houses, coops, and other devices, how to get a large egg yield, how to cure and prevent disease, how to exhibit, how to get the top price for eggs, how to use incubators and hundreds of other points which everyone wishes to know. It explains the famous secret system through which poultrymen have become rich and afterwards sold for hundreds of dollars.

AMERICAN POULTRY is a large, handsomely illustrated, monthly journal, well printed on fine paper, and should be found on file in the home of every poultry lover. No beginner in the poultry business should think of being without it. It will save him many times the small subscription price. The advanced poultryman will also find it of great value; the articles being varied in their scope.

SPECIAL OFFER. The regular price of AMERICAN POULTRY is 50c per year, but in order to introduce it to several thousand new readers, we will, for a short time, give a 200-page poultry book, which is a complete guide in the poultry business, ABSOLUTELY free to everyone sending 50c for a yearly subscription, or $1.00 for a three year subscription to AMERICAN POULTRY. A trial six months' subscription (without book) will be sent for 25c. Never has so much been offered for so small a sum. Advantage of this offer should be taken at once.

AMERICAN POULTRY
SAVOY BLDG., WILKESBARRE, PA.

Always Mention the American Breeder.

Live Stock Market Review

The year 1913 has passed, and with its going hangs the memory of an excellent trade in horses and mules. Early in January a record trade developed in mules, for the south; the east later bought freely of heavy horses, and central states kept up a broad demand for farm horses. Receipts showed a slight increase. The most important feature of the year's trade, however, was the evenness in demand and the narrow movement in prices. Average prices were above those of 1912, though they did not reach the extreme high point of that year. At the same time there was no fall to extreme low levels. Both traders and salesmen say that owing to the well established price level it was the most satisfactory year in the history of the market.

The year also exploded the theory that the motor truck would put draft horses and chunks out of demand. The contrary proved true, and general demand for heavy classes was never better. The northwest developed a surprising trade in horses, and the south by virtue of two crops of high priced cotton following each other, has bought in large numbers. In the corn belt a turning to intensive farming methods, following a five year period of general selling of horse power increased demand from that section. The northwest showed the greatest improvement in quality of production, but that was due largely to a general turning to new blood. Other producing sections continued to upbuild in blood and size. The scarcity of brood mares throughout the season was indicative of breeding activity in all sections.

That the demand for both horses and mules did not come to a complete standstill during the record heat breaking period of July and August, or that there has been no cessation of the movement, during the holiday seasons, are factors that established the stability in equine offerings. The only complaint has been that the drouth of the summer greatly reduced the average weight and flesh of offerings and that is a condition that will be carried over into the trade year of 1914.

January marks the beginning of an increased southern demand for mules. In the last week in 1913 a Carolina trader bought 273 head of cotton mules for which he paid $50,000, making the fifth shipment in twelve months of about the same size to that locality. The buyer stated that he anticipated the biggest demand for mules in January, ever known in the central west. That trade requires fat mules and in the next six weeks will draw supplies from feed barns.

Pleasure horses, drivers, saddlers and ponies, is one side of the market that is neglected, and demand has been, and probably will continue, most eratic. The work classes, brood mares and fancy drafters give as much promise for active demand in 1914 as they did a year ago. The season promises to be one of the large requirements, as commercial activities, construction work, farm work and general trade promises expansion rather than contraction. Farm reserves of both horses and mules are none too large, and increased demand will not find the supply too large.

The following quotations are for serviceably sound horses and mules 4 to 7 years old:

Horses—	
Drafters, choice, 1600 lbs. up	$240@275
Drafters, fair to good	135@235
Chunks, fair to choice	125@160
Chunks, fair to good	80@125
Expressers and light draft	60@120
Plain workers	40@ 85
Southerners, good	120@145
Southerners, plain to fair	55@120
Plugs	20@ 45
Mules—	
13 to 14 hands	$ 85@130
14 to 15½ hands	110@160
15½ to 16 hands	150@200
16 to 16½ hands	185@275

Fat Cattle Prices Higher.

In the past two weeks cattle prices took a turn for the better. The stimulus in the trade was colder weather, which has increased demand for beef, and light receipts of cattle. The Christmas and New Year's holidays reduced the movement materially, and the falling off in the supply assumed definite proportions in the west, though it is probably only temporary for Chicago. With the decrease in the movement, quality was much plainer. At river markets short fed steers predominated and buyers are counting on three months of the plainest quality in the history of the trade. January usually offers large supplies of good corn fed cattle, but this year short feeding has been the rule, and prime beeves are expected to bring a big premium over the other kinds. West of the Mississippi river, cattle receipts will be from sections that feed cotton seed products, sugar beet pulp and hay. Some cattle fed silage and cotton seed will also be offered.

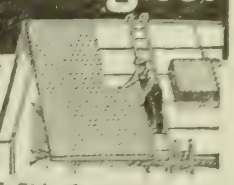
The yearling class which has been so prominent in the finished class since the first of December is about all cleaned up, and the clearance is a good move as popular demand is turning to heavier cattle. Prime heavy steers sold up to $9 and some 1029 pound Nebraska finished yearlings brought $9.50. They were intended for the live stock show in Denver in January, but could not be entered as they were finished in the corn belt. The bulk of the short fed cattle are selling at $8 to $8.60, or 25 to 40 cents higher than two weeks ago. Actual quotations do not look so much higher, but the discrepency is made up in the difference in quality. On the quarantine side steers sold at $7 to $8. Those at $8 had been fed grain. They averaged 1,050 pounds.

Quotations for the various grades of killing steers are as follows:

Prime corn fat steers	$8.75@9.25
Good to choice steers	8.00@8.70
Fair to good steers	7.00@8.00
Common to fair steers	6.00@7.00
Meal fed, choice	7.75@8.35
Meal fed, common to fair	6.55@7.70

Still Scrambling for Cows.

Buyers are still scrambling for cows with prices well up to the danger line. The southwest has marketed a large number of "canner" cows at $4.25 to $4.75, or about the same prices as they got for fat cows last year. These prices are causing them to ship all the weak and amaciated female stock before severe weather begins. Choice cows and heifers have been very scarce and will continue so for some time. A few heifers fattened on wheat fields are coming, but in the west, especially Kansas, female cattle will be held for stock purposes. Veal calves are holding firm, top $11, and few light weight grades selling below $9. Bulls are in active demand and will be scarce from now on.



The following quotations are for the various grades of butcher cattle:

Cows—	
Choice	$6.50@ 7.50
Fair to good	5.75@ 6.50
Common to good	5.00@ 5.75
Canners	4.35@ 4.85
Heifers—	
Choice fed	8.25@ 9.50
Good to choice	7.25@ 8.25
Common	5.25@ 6.25
Plain to fair	6.25@ 7.20
Veal calves	6.50@11.00
Bulls	4.75@ 7.25

Good Late December Stocker Trade.

There has been plenty of demand for all the stockers and feeders offered in the past two weeks, and prices were quoted up to 15 to 25 cents. The scarcity of stock cattle seems to be greater than in feeding lines; this is due entirely to the scarcity of grain feed, though the season seems to have afforded plenty of roughage. Few heavy feeders have been offered, and the recent advance in short fed grades has excluded country buyers from that line. Stock

Special Prices on Edwards STEEL Shingles!

Send NOW for *Edwards' 1914 Direct-from-Factory Offer.* Amazing prices. Freight paid.

Edwards *STEEL* Shingles never rot or burn. Made forever rustproof by famous Edwards "Tightcote" Process. Easier put on than common shingles. No extras. No tools. No expert workmen. I'll Stop Your Losses
From Worms - I'll Prove it or No Pay

If you will fill out the coupon below—tell me how many head of stock you have, I'll ship you enough **Sal-Vet** to last all your stock 60 days, without asking a single penny of pay in advance. All I ask is the privilege of proving to you right in your own barnyard what I have proved to thousands of other farmers. I want to show you how to rid your stock of worms—how to make all your farm animals grow faster, thrive better, keep healthier, put on more flesh on no more feed—**make you more money.**

The Great **WORM** *Destroyer*

TRADE MARK
SAL-VET
REG. U.S. PAT. OFF.

The Great **LIVE STOCK** *Conditioner*

is a wonderful medicated salt which rids farm animals of their greatest enemies—the deadly stomach and intestinal worms. It kills and expels these blood-sucking, life-sapping parasites and greatly lessens the danger from hog cholera and many other diseases.

I'll Feed Your Stock 60 Days Before You Pay

Send no money—just tear off the coupon below, mark down the number of hogs, sheep, horses and cattle and mules you own, give your name and address and shipping station and I'll send you enough **Sal-Vet** to last all your stock 60 days. You simply pay the moderate freight charge when it arrives and at the end of 60 days report results. If it don't do what I claim—if it fails to rid your stock of the dangerous stomach and intestinal worms I'll cancel the charge—you won't owe me a penny.

Hogs at December High Point.

Prices for hogs at river markets are hanging at $7.50 to $7.95, and in St. Louis and Chicago up to $8.15, making the general market closing at the high point for December, and 15 to 25 cents above closing quotations in November. This advance has occurred with receipts the past month the largest of the season and larger than in the same month in 1912. However, weight has been far below normal and the product realized is not as large as a year ago. Packers have been the mainstay of the market, as they are buying freely. Any tendency to get the general price list above 8 cents will meet with strong opposition from them. January promises large numbers, though at light weights, but after that month the movement will subside. Packers want good, smooth, heavy hogs. Prevailing type now is mixed, and many 140 to 160 pound grades, that would have been fed to weigh above 225 pounds had corn been plentiful, are coming. This is at the expense of future supply. March is guessed as the high month, though acute shortage may hang over into April.

The following table shows prices for hogs in Kansas City in the past two weeks:

		Preceding Week.
Mon., Dec. 22	$7.30@7.80	$7.25@7.70
Tuesday	7.35@7.80	7.30@7.75
Wednesday	7.35@7.80	7.30@7.70
Thursday	.....	7.35@7.75
Friday	7.40@7.85	7.30@7.70
Saturday	7.50@7.80	7.30@7.65
Mon., Dec. 29	7.50@7.95	.....
Tues., Dec. 30	7.50@7.95	.....

The following quotations are for hoge:

Choice, 250@300 lbs	$7.80@7.95
Choice, 200@240 lbs	7.70@7.92½
Medium weight	7.50@7.85
Light weight	7.30@7.80
Common to fair	6.00@7.50
Stags	6.00@7.85
Boars	4.25@6.25
Bulk of sales	7.55@7.85

Sheep Prices Holding Strong.

The sheep market has freed itself from large receipts of grass fat and stalk field sheep, and is now on the basis of regulation fed classes. The market is headed upward, though at the present is hesitating until after the first of the year. On the deficient numbers that went into feed lots traders are anticipating a high late winter market. The northwest will offer a good many hay fed lambs, but the San Luis and Arkansas valleys are short. Prime lambs are quoted at $7.75 to $8.25; yearlings, $6 to $7.25; ewes, $4.50 to $5, and wethers, $5 to $5.90.

NEBRASKA FARM MEETING.

"Organized Agriculture" in Nebraska will occupy the week of January 19 to 24. Meetings of a score or more state agricultural and allied organizations are held in Lincoln, Neb., during that time. Nearly, if not quite, all these meetings are held at the State University and College of Agriculture, the lecture rooms and the time of the instructors being given over, as far as possible, to those in attendance.

MISSOURI AGRICULTURAL MEETINGS.

The week of January 12 to 16 will be occupied in Missouri by the various Live Stock and Agricultural organizations which meet annually at Columbia. The meetings are held at the Agricultural College and the College Building and instructors are practically devoted to the farmers' program throughout the week. Something like 25 separate sessions are held and the papers and discussions run into the hundreds.

KANSAS AGRICULTURAL MEETINGS.

Two sessions of agricultural meetings occupy the attention of Kansas people this winter as usual. The first set of meetings were held at the Agricultural College, Manhattan, Kans., during the week just closed. The second set of meetings will be held in Topeka, Kans., in the Capitol Building, January 12 to 16. The part of these meetings under the auspices of the State Board of Agriculture begins January 14.

THE DENVER STOCK SHOW.

The West's greatest annual Live Stock Show is held at the Denver Stock Yards each year. This is the heart of what is essentially a live stock territory and must always be so. It is evident, therefore, that this show is on as solid a foundation as any show in the country. The show this winter, which is the ninth annual exhibition, will be held January 19 to 24. Nearly all the National Live Stock Associations participate, and $30,000 in premiums are being advertised. The secretary is Fred P. Johnson, Stock Yards Station, Denver, Colo.

A SAMPLE TEXAS JACK COLT.

I am sending you a photograph of my jack colt, Big Boy, certificate No. 5704; 14 months and 20 days old; weight, 760 pounds; 61 inches high; 66 inch heart; 8 inch bone; ears from tip to tip, 33 inches.

He is well proportioned and easy to keep fat. I feed him threshed oats and bran and occasionally I mix in either corn chop or a little cotton seed meal. I am afraid to give him much meal as I don't think it good feed for a horse or jack. I give him plenty of good prairie hay and have a rye patch that joins his lot, which I give him access to every evening when the weather is fair. This green rye keeps him hearty and he gets plenty of exercise while grazing.

I think I can make him weigh 1050 or 1100 pounds when two years old, and will have him at our state fair next fall if nothing happens. Everybody that sees him says that he is

Jacks, Jennets, Mules, Horses and Cattle

PUBLIC SALE, JANUARY 29

at my farm 1-2 mile S. W. of Kiowa, Kas., commencing at 10 o'clock A.M. promptly

22 Jacks ranging weanlings to 8 years of age, including my great herd jack, extra heavy boned; 16½ hands high; as good as grows; black with mealy points. Several of his colts in sale; 9 head coming 3 years old; 6 head coming 2 years. (These jack colts are very heavy boned.) 5 weanlings.

15 Jennets, all young and in foal. One jennet with jack colt by side.

20 head of mules ranging in age from weanlings to 7 years old.

25 head of horses, including one Percheron stallion colt coming two years old; a fine one; very large; sire and dam both imported; choice of his crop on J. C. Robison's farm. Some good heavy mares in foal to jack, and some well broke driving mares. One registered trotting bred mare, four years; fine single driver; one fine family mare 5 years; safe for any lady. Some nice yearling and two year old colts; one registered trotting bred stallion 3 years old; black; weight 1200; well broke; good single driver. He is by Thornfield, 2:10½; is a beauty and a fine prospect.

15 head of Jersey cows and heifers. All full blooded stock, but not registered. Also 10 head of calves, 70 head of 2-year-old steers, all native stock and a nice bunch. Will keep the steers on my wheat at the regular price per month, for the parties buying them, if they so desire.

10 bushels of fetereita.

I. N. GREEN, Kiowa, Barber County, Kansas

Auctioneers:—Col. Pete Powelson, Col. Bob Harriman, Col. John Snyder.

HOME OF THE GIANTS.

THREE JACKS FOR SALE—From 3 to 5 years old; about 15¼ hands high; large, heavy bone and registered. All black with white points. Price reasonable if sold soon. Address **S. A. FARNSWORTH, BLAIRSTOWN, MO.**

the best they ever saw. One mule and horse dealer of considerable note of Fort Worth told me that Missouri or Kentucky could not beat him, and another man told me that he had been in horse and mule shows in St. Louis and Chicago, and he had never seen one any better at his age. Now this is saying right smart, but I've the goods and if anybody thinks they have one better, trot him out. My object for writing this is to let you know that Texas is in the ring, and up near the top of the ladder for good stock, even if we are "cotton raisers."

Now in regard to the American Breeder. I consider it the best farmer's paper published and has more good horse sense in it than any paper I ever read. I have not been taking it long, but cannot ever afford to do without it as long as I can get a dollar to buy it with.—S. M. Cooper, Johnson county, Texas.

HOW ABOUT THIS PROPOSITION?

To the American Breeder:—I am a reader of your paper and think it the finest paper I ever read. I am in the breeding business; have a registered Percheron stallion and three Mammoth jacks. I want to ask the readers what they think of the following proposition: I am now standing my horse for $12.50 and jacks for $15 to insure colt to stand and suck, and I think it would be better to put them down to half of this "stand-and-suck" price, for cash or bankable note due August 1st, and if not paid when due draw interest from date until paid, and require that when the mare is traded or sold the colt is paid for. This being for the season, and, the right to return every 21 days. It looks to me like the mare owner would pay more attention to his business and would be cheaper for him and a world easier for the breeder.—J. J. Tidwell, Alfalfa County, Okla.

A PAYING PROPOSITION.

To the American Breeder:—I think Mare Owners Editions sent to customers a paying proposition. It is a good advertising method; it is the first step of the mare owner to take better care of the mare while in foal; and raise better colts; and take better care of the colts; and better colts make better market horses and that makes more money to the mare owner. I think it will help settle old "fogy" breeding ideas. I think it would be profitable to send papers to a large list of mare owners.—I. C. Evans, Davis County, Iowa.

To the American Breeder:—I think it will pay any Scientific Breeder to send his customers the mare owner editions. I have had customers who would not let me breed their mares with a capsule. They can read and see what others have done and learn something about breeding and get rid of some of their pet notions.—F. M. Clevenger, Wayne County, Ind.

To the American Breeder:—I consider my $3.00 well invested in having those four numbers of the Mare Owner's Edition sent to 30 of my neighbors and friends and I desire to mail you a larger list of names within the next few days.—H. D. Bowsher, Allen County, O.

To the American Breeder:—I think the Mare Owner Edition a good thing for any country. There are some that pay no attention to it while others think it is the only thing. I sent it to thirty mare owners in my neighborhood and had good results.—R. H. Johnson, Hamilton County, Nebr.

To the American Breeder:—We like your Mare Owner Edition, and you may depend on us for an order for 30 or 40 copies. We have not taken this every year and think we have found it worth the price when we did.—Garee & Garee, Cleveland County, Okla.

Questions and Answers.

Questions from subscribers, on any phase of live stock production—breeding, feeding or the treatment of injury or disease—will be answered under this heading free of charge. No questions will be answered by mail, but we make the service through the American Breeder, giving inquirers the help of the best authorities in the country, free, because the problems of one reader are likely to be of interest to all. As knowledge of location is sometimes necessary to a proper understanding of the answer, we give the state from which the inquiry comes, but names and postoffices are withheld, making it safe for subscribers to ask questions of a confidential nature whenever they wish.

Do not make your question a part of a letter; write it on a separate sheet of paper. Send in your questions every time something comes up you need to know; we are glad to have them.

628—STALLION'S BREEDING CONDITION—I bought a two year old stallion last June. His growth has never been forced. He went through last winter without grain. Run out to pasture and to hay stacks. His present weight is 1525 pounds; and is in what I call good working flesh; ribs are covered with an inch of fat. He has made an average gain of 38 pounds per month since June and has been worked light for exercise. Has been fed oat hay and alfalfa, with one gallon oats three times a day. Should I feed him heavier to gain faster? I notice the imported stallions and others are so well covered with fat that a rib cannot be felt. Is this necessary and does it make better breeders of them?—Colorado Subscriber.

REPLY—While your horse is above the average in size, he could have been made much larger by forcing him from the start. Increased size should be made on a stallion before he is 30 months of age; colts may be fed very liberally up to that period. In order to maintain an increase in size of draft horses it is necessary to give an abundance of feed to the young stock. As they advance toward maturity the forcing should be discontinued. If your stallion is familiar with the roughness you are feeding, the grain may be satisfactory. Ordinarily we would increase the oats a little and not feed to much alfalfa unless it is of an exceptionally good quality and well cured. Keep your stallion growing gradually; do not get him too fat from this time on. When the breeding season begins increase the oats enough to keep him gaining in flesh through the entire season. Stallions usually give better results while slightly gaining in flesh during service. There is no set rule that can be applied to all stallions. You must study the individual. Watch the bowels and the general condition of your horse.

629—MARE ABORTS—We have a fine registered Percheron mare, 12 years old that seems to be in perfect health and natural in all respects. I bred her first when three years old, and each year since, usually twice during the spring, when she refuses, and from all indications seems to be in foal, gets illustrated, full in flanks and fat. I have had a number of good horse men to affirm that she was in foal, but she has raised one colt that is now four years old. Will you suggest some way by which she can be made to raise colts?—Kansas Subscriber.

REPLY—We would suggest that you change the breeding date on this mare. For some cause she has slipped a colt from the spring service, and the tendency has been to do the same thing at about the same period of gestation and it has now become a habit with this mare. She should be bred so that this period would come at a different time in the year. It might be possible to breed her at the next heat period, if that should be early, and good results might follow. Very often these mares can be bred in the fall of the year and carry their colts to maturity.

630—STALLION FEED—Would a horse be any surer foal getter to feed him straight oats and hay, or would it be better to feed some corn? Is it safe to feed millet hay, say every third feed?—S. G.

REPLY—Oats and bran, equal parts by measurement, and prairie hay, will give good results for stallions in service. If part of the roughness should be clover or alfalfa, the bran may be discontinued. Corn is not the best feed for a stallion in service. Some corn may be fed during the coldest period of the year. Some breeders have had fairly good results by feeding a limited amount of millet hay when cut very early and well matured. We believe it is better not to feed millet hay of any kind to valuable stallions. A little saving might be made occasionally, but ordinarily the

FAIRVEIW JACK AND JENNET FARM

32 Jacks and 35 Jennets, the best that grow, 14½ to 16½ hands high—Jacks with lots of bone and substance. Everything guaranteed as represented. Prices right. Address

You Cannot Beat

No. 10—Heavy, high-test rawhide center, from butt to tip, rubber lined; double waterproof covered, 6½ feet long. Price. $1.00

No. 11—Special Stock Yards Horseman's Whip, full length, 10½ feet; lash 5 feet; 12 nickel ferrules. Price...$1.00

"CONQUEROR" STALLION BRIDLE

Guaranteed to Hold any Stallion or Jack

This bridle is made of especially selected material. Can be adjusted to fit any size head and for either hard or tender mouths. Just the thing for breaking runaways or kickers. Price, each, $2.50.

CAUTION: Never tie an animal with this bridle. If he got to pulling he could split his head.

Every One of the Above Articles Sold On a "Money Back" Guarantee. Cash Must Accompany Your Order. We Prepay Shipping Charges.

BREEDERS HARNESS AND WHIP CO. 1204 Central Street KANSAS CITY, MISSOURI

feeding of millet in such cases is expensive in the end. Better dispose of the millet hay for cattle feed and purchase good, bright hay for your stallion.

631—SERVICE FOR A THREE YEAR OLD STALLION—I have a thoroughbred German Coach stallion coming three years old. Would one service every other day be too much for him? Or should he serve any more than that? —S. G.

REPLY—A service every other day should give good results in a case of this kind. Some stallions have made more services than this number with seemingly good results, but many good sires have been ruined before maturity. Be careful about the selection of mares and do as little rebreeding as possible. Employ artificial means if crowded.

632—YEARLING JACK—I have a young jack 13 months old, measuring 55 inches from ground to center of withers; 8 inches around smallest part of bone below knee; 13 inches at knee; 16 inches at arm; 30½ inches from tip to tip of ears; 56 inch heart girth. This is the first jack colt I raised and would like to know if he is as good as the average for his age. He has been given only ordinary colt care under ordinary farm conditions. How long does a jack usually grow?—Kansas Subscriber.

REPLY—Your jack is a little better than the average, both in height and bone and if properly handled should develop into a good serviceable animal. The principal part of the growth in most jacks will be made by four years of age; some of them grow until they are six. Keep your jack growing nicely. Part of the roughness should be either alfalfa or clover. Jacks require plenty of roughness of the right kind.

633—SLOW SERVING JACK—I have a jack that is very slow to get ready, but serves quick when he gets ready. If you know anything that will make him get ready quick, that will not hurt him, please tell me. He is a poor teaser.—Mississippi Subscriber.

REPLY—You should give the age of your jack and the manner in which he is used; whether he is used as a teaser and everything connected with his service, in order for us to give any suggestions worth while. Improve his physical condition so that he will be in the best of health. Never use a whip or speak harshly. Do not use him for a teaser. Be sure that the mare is in the best of heat when a service is attempted. Either hobble your mare or put her in a good, substantial pit. Catch a little urine from a jennet that is in heat and pour a little of this on the mare's tail so that the jack may smell it while preparing him for the service. Do your breeding in an enclosure. Have all spectators vacate. Keep the dogs and cats out of sight. Avoid all extraordinary noises.

634—EXERCISING A DRAFT STALLION—I would like to know, through your valuable paper, whether or not when exercising a Belgian stallion (age three, weight 1900), it would hurt him to trot in season time?—Indiana Subscriber.

REPLY—You may let your colt jog a little and gradually increase the distance each day until he is accustomed to that manner of going. Stallions having a very large scrotum should be watched closely. If it seems to hang heavy, a support should be used. Never allow your stallion to get very warm. A better plan with this big colt is to let him walk.

635—EXAMINATION OF MARES—One of our stallion men attended the breeding school at Kansas City, and is having good success. I had him to examine two mares this fall to see if they were in foal or not as I was doubtful about it. He examined one and thought he made a mistake and got scared and was afraid to examine the other one, saying he believed she was in foal. Now, what ought I to have done? Insisted on examination or not? How much should we mare owners expect from our stallion owners after they attend your school and have a certificate?—Missouri Subscriber.

REPLY—You should insist on that graduate returning to school. The next time he will look for this particular feature and learn it thoroughly. This is not a difficult job for any one that has had the same opportunity that this man has had. He should have no difficulty in making this examination. It is not advisable to insist on any one undertaking a dangerous job when he feels he is not satisfied he can do it. There are some who do not believe it is necessary to learn all these things, and they do not pay enough attention. That student can blame himself only, as he had an excellent opportunity to learn how that work was done, with a good instructor by his side showing him just how to do it. Mare owners should insist on these men knowing everything pertaining to horse breeding. If they do not pay particular attention while at the school they should be sent back and learn it properly. Their tuition is paid for life and there should be no excuse for them not knowing how to make such examinations. There are men who will always be timid about such examinations, no matter how much they know, but a little practice along these lines may cure this timidity.

MORE BUSINESS THAN ALL OTHERS.

To the American Breeder:—My ad in the Breeder is bringing inquiries for Morgans from Vermont to California—practically every state in the Union. I ran ads in several live stock journals, but the Breeder brings more business than all of the others. I know of no other paper from which the horse breeder can get so much valuable information.—Richard Sellman, Mountain Vale Ranch, McCullock County, Texas.

To the American Breeder:—Last season was the first time I sent out Mare Owner Editions and I am very well pleased with results. The recipients nearly all thanked me and said they got lots of good information from the paper.—C. M. Jennison, Lane County, Kans.

Registered big boned Black Jacks and Jennets. Fine individuals; best breeding; priced right. **J. H. SMITH, KINGFISHER, OKLA.**

ARKANSAS MAXIMS.

To the American Breeder: To make a slow jack perform, be kind to him. Out of season, feed him light and let him have a good lot.

To break an unruly horse, use a pulley bridle.

After breeding your mare, don't turn her out on green pasture; if not at work keep her up and feed dry feed.—Arkansas Subscriber.

WHO AGREES WITH MR. HAWKINS?

To the American Breeder:—There are doubtless some good subscribers who go through your publication at a glance, and then cast it aside, but I believe by far the greater number give it close attention and would be glad of some way in which to keep it intact as a means of reference. Besides, there are always a number of articles in each issue that are of importance to breeders, and that cannot always be digested at one reading. Meantime the paper has been mislaid and perhaps valuable information lost. To this class of readers I believe a good binder at $1.00 would be very acceptable.—S. E. Hawkins, Livingstone county, Mo.

To the American Breeder:—The Mare Owner Editions is a very good way to give the mare owner information about the mare and her care during pregnancy. The better knowledge he has for improving his stock the more he will look after good sires and not about the few extra dollars he has to pay for a good sire. For he will know his few extra dollars are well invested in a good sire. —Wm. Raetz, Geary County, Kans.

To the American Breeder:—I think the Mare Owner Editions are good advertising. It is a great educational proposition. I have less trouble with customers that read and study the Mare Owner Editions. It causes them to take better care of the mares and of course they will get more and better colts.—J. H. Walker, Cooke County, Tex.

To the American Breeder:—I think sending out the Mare Owner Editions is all right, as it gets the things before the men that you want them to know, and there is no other way to do it as satisfactorily as by the American Breeder—Chas. F. Loomis, Jewell County, Kans.

In Minnesota the use of hog cholera virus is limited to veterinarians in state employ on account of possible danger of spreading cholera by its careless or unwise use.—Dr. M. H. Reynolds, Minnesota University Farm.

JACKS AND JENNETS.

Thirty-five head of Mammoth jacks and jennets for private sale. Jacks in age from 1 to 5 years old; in size up to 16 hands. These jacks are all good ones, black with white points. I have one of the best herds of jennets in Kentucky. I raise all of my own stock and will sell them worth the money. Write for prices today, or better, come and see them.
U. G. SAUNDERS, Flemingsburg, Ky.

25-Jacks and Jennets-25

For sale. I am pricing to sell. I have them from colts up.
R. M. JOHNSON, Bolivar, Missouri

Registered Black Jack

To trade for extra good young black jennet or for registered weanling colt, either Percheron or saddle horse. Jack is prompt performer on mares and has lots of colts to show.
C. M. HARBISON, Goliad, Texas.

25 Mammoth Sacks and Jennets

For sale. I have more high class jacks and jennets to offer the public this season than I have ever had before. They are bred right; priced right, and fully guaranteed.
JAS. M. SPURGEON, Williamstown, Lewis County, Mo.

JACKS AND STALLIONS

For sale. Registered jacks; all black with white points; from 15 to 15¾ hands; from 3 to 6 years old; well broke and as good as grow.

Percherons from 2 to 8; the big, good kind, weighing from 1700 to 2100 pounds; all guaranteed as represented.
J. E. PARK, Owner, CAMERON, MO.

KENTUCKY JACK AND PERCHERON FARMS.

200 head of big bone, Kentucky, Mammoth jacks, Percheron stallions, mares, saddle and plantation horses. Our prices and terms will suit you. Write your wants or visit our farms. 2500 bushels of blue grass seed.
COOK & BROWN, Props., Lexington, Ky.

JACK AND JENNET SALE.

At public sale on the Sidders estate, January 12th, 1914, one registered black Mammoth jack; weight 1100, and has passed state inspection. Ten head of large jennets, registered and eligible to registry. Also three coming one year old jack colts, also eligible. Will be sold without reserve.
A. L. DAWSON, Administrator S. R. Sidders Estate, Giltner, Neb.

Black Jack

For Sale—14 hands; plenty bone; perfect server; sure foal getter; easy to handle. Price $500. Will use one good mule or mare.
H. B. NEWTON, Magnolia, Ark. R. 5.

To Feed Horses Economically

First Make Sure as to What is Real Economy by Considering Feed and Care as An Investment. Important Information On the Subject Deveolped Both Here and in Europe.

With the present scarcity of feed of all kinds it is necessary to study the feed problem closely. By request we are reprinting the following article which appeared in this paper some time ago, written by Professor Henry W. Vaughan:

Opinions may differ slightly as to what constitutes economy in the feeding of a horse. The most economical ration is not always the lowest in price, but it is the one that combines efficiency with low cost. What is economical with one horse may not be economical with another. For instance, if the horse is a high priced, pure bred one, more time, labor and feed may be invested in feeding him than would be justified in the case of the average work horse. I say invested in feeding him, because that is exactly the way to look upon a feeding problem. We should not begrudge an animal its feed, but gladly provide that ration which will accomplish the desired result with the least outlay of money. When this is done we may feel that we have invested wisely and profitably if the animal is a useful one.

We may look upon the work horse as a locomotive, and like real locomotives, horses vary in their efficiency or working qualities; but that is a matter which space will not permit a discussion of at this time. Feeding the work horse is comparable to burning coal under the boiler of a locomotive—the better the quality and the greater the amount of fuel burned the more steam will be generated, and hence the greater work done. Our problem is to generate steam as cheaply as possible, but we must remember that there is a limit to a horse's digestive capacity, hence when he has hard work to do the necessary energy cannot be supplied by feeding hay or straw, because roughages have little fuel value and the horse cannot consume enough of them to furnish the necessary energy. When the locomotive is idle it does not have to be fired, but when the horse is idle he must still be fed, although it then requires but little energy to maintain the horse at his usual body weight, and roughages are, at such a time, particularly valuable on account of their low cost.

Every farmer is and must be a user of horses or mules, but many farmers are not horsemen in the true sense of that term, for many horse users fail to see that there is a big difference between horses and locomotives after all. They lack sympathy for the horse and do not understand him. They seem to think they can pull open the throttle and that the horse should go at a good clip continuously, just as a locomotive does. They feed him as they would a locoomtive, shoveling out the feed carelessly, irregularly and in varying quantities. There is a vast amount of difference in economy, depending on the way a horse is handled and worked as well as in the way he is fed, for two teamsters may get far different results from the same team fed exactly the same in both instances.

The feeding of horses is a subject upon which a large volume might be written, but in the space here available the writer will endeavor to present something useful concerning how much, when, what and how to feed work horses, together with some useful hints on horse feeding in general.

A great deal of experimental work has been done with horses in this country and abroad, much of which has furnished information relating to economy in feeding. At the New Hampshire experiment station records were kept which showed that the average cost of feeding one farm work horse one year was $74.33, and that he consumed 13.6 pounds of grain daily, 10 pounds of roughage and 80 pounds of water. Each horse worked about 7 hours each working day, which made the cost of feed 3.4 cents per hour of work. At the Ottawa experimental farms, where 19 horses were worked, they figured that the cost of feed was $99.80 for each horse per year, or 27.3 cents per day. These figures give an idea of the cost of the feed consumed by the average farm chunk weighing 1,200 to 1,400 pounds, although on the basis of present prices for feed the cost is somewhat higher.

Attention should be given to the teeth at intervals, for they frequently wear unevenly, leaving sharp points and ragged edges that cut the cheeks so that the pain prevents the horse properly masticating his food. In such cases the teeth should be dressed by the owner or by a veterinarian, this being an important point bearing on the economical maintenance of a horse. If a horse has worms he cannot be fed and worked economically. In case he has them, starve him to empty the stomach and intestines and give a very strong physic, which helps the horse to pass them out. A very good condition powder is made of equal parts by weight of oil meal, wood ashes and salts mixed together. All of this may be given that the horse wants, and when this is done there is rarely any trouble with worms. A lump of salt should be kept in the manger all of the time unless it is fed in some other form.

From 10 to 18 pounds of grain should be fed daily, according to the weight of the horse, and the severity of labor, the total hay and grain averaging not less than two pounds per 100 pounds of horse. The morning feed should be moderate, the noon feed should consist of a light grain feed and a handful of hay or none at all, and in the evening the heaviest grain feed, and especially the heaviest feed of hay should be given. Roughages are much less easily digested than concentrates and an idle horse more perfectly digests his food than does a horse at hard labor, hence it will be most economical to give the most hay at night. There is not much fault to be found with the amount of feed ordinarily fed to farm work horses except that they get too much hay as a rule, it being in the mangers at all times. When a horse is full of hay he cannot breathe properly and becomes distressed and tires quickly when put at hard labor. Perhaps the short crop of the present season will help to correct this fault, the generous and seemingly humane custom of keeping farm horses filled up with hay being a poor policy.

Observe the hay stuffed middles of "old Charlie" and "old Maud" and compare them with the middles of the horses working for some big city firm in whose stables feeding is given much more study than on the average farm. The city horses will be found more trim in the appearance of the middle, but not at all gaunt, and the city teams seem harder and perform their work more easily, especially at the trot. The difference is largely due to hay.

The general practice is to feed three times daily. Regularity as to the time and amounts of each feeding cannot be too strongly emphasized, Sunday included. Speaking of Sunday, the writer begs to express a word of sympathy for the faithful farm horse that works all week and then does duty on the road on Sunday, and in some cases most of Sunday night.

Most good feeders make it a rule to water before feeding, the argument being that when watered after feeding the food is flushed out of the stomach before it becomes thoroughly mixed with the gastric juice. Where records have been kept, however, it apparently made no difference whether the horse was watered first or last so long as it was always done the same. Irregularity in feeding and watering have been found to cause a loss of economy.

Hard worked horses must have rich food, for the richer the food the more easily is it digested and the greater the proportion available for work. A horse cannot consume enough hay to keep up its body weight when doing severe labor. If rich feed is given carelessly, however, regardless of whether the horse is at hard work or idle, there is danger of founder and other troubles. Idle horses and those at light work do best on light rations containing less grain and more roughage, and it is an advantage to use roughage because of its low cost. Sudden changes in the amount or nature of the feed, such as from oats to corn, or from old to new hay may bring trouble and thereby add to the expense of keeping the horse. Wilted grass is more dangerous than fresh grass.

Feeds produced on the farm are usually available at less cost than those which must be purchased. Corn, oats, barley, kafir, milo, Northern field peas, cowpeas, alfalfa hay, clover hay, timothy hay, mixed hay, oat hay, straw, roots and shredded corn stover are all direct products of the farm and more than ample to the needs of any horse used for ordinary draft purposes. Some people have expressed wonder that the experiment stations have not been able to figure out a single best ration for work horses that is most economical, but this is impossible because feedstuffs vary in price from year to year and according to the locality, and some sections are better adapted to certain crops and not to others. Furthermore, it is only during the last few years that investigators have come to fully realize the value of some feeds and also that the values of some other feeds have been over-estimated.

To the first 100 men *owning horses*, who answer this advertisement, I will positively send my introductory course in Horse Training and Colt Breaking ABSOLUTELY FREE.

World's Greatest System of Horsemanship

Twenty-five thousand FARMERS and horse-owners have taken my regular course and found that *it does the work.* Even if you have only *one horse*, it will pay you to master my wonderful system. The Beery Course is the result of a lifetime's work as a tamer and trainer of horses. As one of my students has said, "The horse has never been foaled that Prof. Beery cannot handle." My record proves it.

Master Any Horse

The Beery Course gives you the priceless secrets of a lifetime—enables you to master any horse—to tell the disposition of any horse at sight—to add many dollars to the value of every horse you handle—and my students are all good traders.

Break a Colt in Double-Quick Time!

You can do it by my simple, practical, humane system. There is a lot of money in colt training.

Make $1,200 to $3,000 a Year

Many of my graduates are making big money as professional horse trainers at home or traveling. I made a fortune traveling and giving exhibitions. You have the same opportunity.

BEFORE TRAINING

AFTER TRAINING

My Graduates Are Doing Wonders

A. L. Dickinson, of Friendship, N. Y., says: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons, and have been offered $400 for the pair." Fred Bowden, R. R. No. 2, Keokuk, Iowa writes: "It's worth many times its cost." I have many similar letters from graduates all over the world.

No More Scalded Shoulders

Don't lose time and money because of sore shoulders. Don't pay out money for Hames and Sweat Pads. Try a pair of indestructible

Hameless Adjustable Metal Horse and Mule Collars

Endorsed by veterinaries and men of high authority. A. F. DeLaune, St. Thomas Plantation, Albemarle, La., writes: "Send me forty steel collars."

Think what that means to the horse owner. Think of the time saved—money saved and suffering saved the mules. Think of the extra work you could do with a collar that insures against galls and sore shoulders. Be humane, progressive and up-to-date and save money by using

Indestructible Collars

and you'll be free from sore shoulder troubles. The metal won't permit the sweat to scald and produce a sore. Being adjustable they fit the neck and bring the draft to correct point. Durable—last a lifetime. The ideal work horse and mule collar. Be sure and test out this great Twentieth Century invention—100,000 in successful use. Good Agents Wanted. Manufactured by

Johnston-Slocum Co., 933 State St., Caro, Michigan

Almost every book dealing with the feeding of horses places oats at the very top of the list of horse feeds and insists that no other feed can equal it under any conditions. This opinion is so widespread and so thoroughly believed as to greatly impair economy in horse feeding, both on farms and in cities. Oats are said to give more spirit to the horse, put him in better condition and enable him to do more work than any other feed on the horse bill of fare. This is said to be especially true during hot weather as compared with horses receiving a grain ration largely or entirely of corn. Corn is said to be a heating food not well adapted to work horses, and is said to make them sweat easier and wear out earlier than horses fed on oats. Claim was made that oats contain a stimulating substance which was called "avenine," which gives great spirit to the horse. But even Dr. Cook himself was not able to discover "avenine."

There is no disputing the fact that oats constitute a highly satisfactory feed for work horses, but the cost is high compared with corn and a chemical analysis fails to disclose any reason why mature horses at work should benefit from oats more than from corn. As early as 1874 the Paris Omnibus Company, working 10,000 horses averaging in weight about 1,200 each, conducted extensive feeding trials with Indian corn. When fed exclusively it was said to lessen the spirits of the horses, hence a mixture of about one part corn to two parts oats by weight was adopted in place of the exclusive oats ration. It was said that the company was thus enabled to save over $20 on the feed bill of each horse during the year, or a total of from $200,000 to $300,000 annually. The Paris Cab Company tried the same scheme and almost entirely replaced oats with corn. The same thing was tried with the French military horses and the corn ration gave just as good results as the oats, the horses showing the same energy and vigor.

At the Ohio experiment station three pairs of horses weighing around 1,500 pounds, were used as a test lasting 11 months. All were fed mixed timothy and clover hay, but one horse of each pair was fed oats and the other got an equal amount by weight of ear corn. The oats weighed 28½ to 31½ pounds per bushel and the ear corn yielded 82.5 per cent shelled corn. Approximately the same amount of hay was given to each horse, except one corn fed horse which did not have the same capacity as the others. Any hay refused was weighed and deducted from the records. The two rations produced the same results in the spirit and endurance of the horses. The corn-fed lot withstood hot weather as well as did the others. The three corn-fed horses together lost nine pounds during the 11 months and the three oats-fed horses gained 28 pounds—a very small difference. The former together consumed 14,985 pounds of corn and the latter consumed 14,895 pounds of oats. The corn-fed horses together consumed 16,131 pounds of mixed hay and the oats fed lot consumed 17,455 pounds. Figuring corn at 40 cents per bushel, oats at 30 cents per bushel and hay at $8 per ton, it cost $152.67 to feed the corn-fed horses and $209.46 for the oats-fed group—a saving of $56.79 by feeding corn, or $18.93 per head. The corn-fed horses each averaged 1,544 hours of work during the 11 months and the oats-fed horses averaged 1,538 hours. The cost of feed per hour of work was 31.3 cents for the former and 4½ cents for the latter—an increase of 33 per cent in the cost on account of feeding oats.

Corn has been cheaper than oats as feed for work horses since 1866, and the Ohio experiment indicates that ear corn is fully as valuable as oats, pound for pound, for feeding to mature draft geldings, or mares if used only for draft purposes. Its value for brood mares is another matter.

Alfalfa is another great source of economy in compounding rations for horses. When fed to road horses it is not of much value, being too laxative and causing the animals to sweat freely. However, it can be used with all classes of horses to some extent, those at slow, steady work especially. On a great many Western farms and ranches it furnishes the exclusive roughage for horses. At the Utah station alfalfa has been the only roughage used for all work and driving horses for 12 years. At the Wyoming station it was found that 13.8 pounds of alfalfa hay and 2.25 pounds of oat straw would maintain a 1,000-pound idle horse.

At the Utah station the experiment was tried of feeding 25 pounds of alfalfa hay daily to each of two horses, while two others received 25 pounds each of timothy hay, all doing farm work. Each horse also received 10 pounds of mixed bran and shorts daily, or 15 pounds if the work was unusually hard. This continued for nearly a year, and it was found that the alfalfa fed horses held their weight or gained, while those fed timothy sometimes lost. The feeding of alfalfa cheapened the ration and at the same time improved its efficiency. The alfalfa fed horses presented a better appearance, and no ill effects were noted on the health of the animals by long continued alfalfa feeding.

One of the leading horse importing firms in this country installed an alfalfa mill, using alfalfa meal in place of bran. They were thus enabled to save as much as $200 per month in their feed bill at times when they had a large number of horses on hand.

The writer believes that on farms in the corn belt where alfalfa may be grown successfully, no ration will equal ear corn and alfalfa hay for farm chunks used at ordinary farm work; no ration being any more efficient and none being as cheap. It is conceded that a bran mash on Sundays or a few carrots once in a while will be useful as conditioners or tonics, but the regular ration is most economical when composed of corn and alfalfa. If alfalfa is not available, then good quality clover hay or mixed hay will make the next best roughage for work horses from the standpoint of economy.

No doubt some readers want to know whether it is advisable to turn farm horses out to pasture at night instead of giving hay, or whether it is more economical to keep them

By Using Jack Sorine. Sold With a Cash Guarantee.

O. P. WILSON SERUM CO., Kansas City, Mo.
Enclosed find my check for $5 for a package of your "Jacksorine" for jack sores. This is for a neighbor and shows on its face that your salve is doing my old jack's leg some good.
June 5, 1913. W. H. HAYS, Bloomfield, Ky.

We guarantee Jack Sorine to cure any sore on the legs of a jack or stallion, no matter how long it has been sore or what caused it. You know we have a good, reliable remedy or we could not guarantee it to cure all sores on the legs of stallions and jacks, without any restrictions. It is put up in a substantial box and sent promptly by mail. It is a paste and applied with a small brush.

Send money by bank draft or P. O. money order. Price $5.00.
O. P. Wilson & Co., 3754 Wayne Avenue, Kansas City, Mo.

"VISIO"

A Remedy for Moon Blindness

(Opthalmia), Cataract and Conjunctivits
Shying horses all suffer from diseased eyes.

"VISIO" will convince any horse owner that it is the best remedy for defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our money back GUARANTEE.

$2.00 per bottle, postpaid on receipt of price.

VISIO Remedy Ass'n. 2475 Calumet Ave., Chicago, Ill.

stabled and on hard feed. There is certainly no pleasure in working a pair of horses that are turned out to pasture every night, and there is much more danger of overworking them because of the soft condition produced by grass. This does not mean that there is any objection to turning them into a bare pasture at night where they can stretch themselves, take a good roll and spend the night in the open. Undoubtedly a horse gets more rest under such conditions than he does in a stall, especially if the stall is stuffy and cramped, but the morning and evening feeds of hay should be given just the same.

Tests made at the Ottawa experimental farms where one horse in each of five teams was fed the amount of patent stock food indicated by the directions on the package, while the other received no condimental food, resulted in an average gain of 12 pounds per horse in 42 days for those getting the stock food, while those getting no stock food made an average gain of 13 pounds. There was no difference in the appearance or spirit of the two lots.

In large city stables the cutting or chaffing of hay has been found advantageous, but there is no economical advantage in chaffing hay for farm horses. Also when timothy hay is cut into very short pieces it makes the horses' mouth sore and he falls off in weight. Cooking feed for horses is unnecessary and unprofitable. Soaking ear corn is advisable when it is very dry and flinty so as to injure the horses' mouth. It is also advisable in the case of old mares. Grinding grain for horses has advantages but they do not cover the cost of grinding. Of course old horses with poor teeth are again an exception.

Wintering Farm Work Horses.

A great deal more money is usually spent in wintering farm work horses than is necessary. The writer has seen horses wintered on good oat straw and water, with no grain except what little might have been in the straw, and they came out fat in the spring. This practice would hardly be advisable when the horse is to be put to hard work as soon as spring opens, in which case an allowance of grain out to be fed also. As showing what may be done in economizing in winter rations, some work done at the Michigan station with 12 horses weighing 1,200 to 1,300 pounds gave interesting results. Six of the horses were fed the regular daily ration of 11 to 12 pounds of oats, 18 to 20 pounds of timothy hay and a light feed of bran once a week. The other six had been fed the same feed, but were changed to a ration of shredded corn stalks, oat straw, hay, carrots, ear corn and a feed mixture of dried beet pulp, bran and oil cake in the proportion of four pounds of pulp, one pound of bran and one pound of cake. The entire ration was fed as follows:

	Lbs.
Morning feed—	
Oat straw	5
Carrots	4
Ear corn	3
Noon feed—	
Timothy hay	4
Oats	2
Night feed—	
Shredded cornstalks	8
Carrots	4
Feed mixture	2

The idea of feeding a variety of substitute feeds was to tempt the horses to eat. No doubt similar results can be secured with fewer ingredients. After feeding the rations for ten weeks it was found that the cost per head daily for the regular ration of hay and oats was 29½ cents based on current prices during the winter 1908-09, while the cheaper ration cost only 17.7 cents daily—a saving of 11.8 cents daily or $8.18 per head during the 10 weeks. This gives a good idea of the possibility of economy in the winter feeding of farm work horses. It is interesting to note that in the experiment just described there was a loss in weight of 11 pounds per head when the regular ration was fed, while the cheaper ration resulted in a gain of 14 pounds per head.

The selection of rations for work horses is a matter worthy of much consideration and will repay an expenditure of much study with a high rate of interest.

MERCHANDISE FOR LIVE STOCK.

I want to trade equity of $2,250 in a $3,000 stock of merchandise, now with the Interstate Mercantile Co., Oklahoma City, Okla., for some good live stock. Describe and price in first letter. **C. MICHEL, Leslie, Mo., Route 2.**

LAND FOR SALE OR TRADE.

160 acres close to market. All tillable; good soil. Price $2,500. Will take a good Percheron mare or stallion as part pay. Also a 320-acre homestead relinquishment; sell or trade cheap.

JAS. HILDRETH, Dighton, Kas.

LAND FOR SALE

or will change for any kind of young stock, mules preferred, 160 acres in Parmer county, Texas, 7 miles from railroad, in as fine country as the sun ever shown on. Not a foot of waste land or a stump or a stone on it. Write

L. P. TAYLOR, West Liberty, Ohio.

Fine Location for Breeding Establishment

A good eight acre tract of land; 7 room house; 150 fruit trees and vines; 100 shade trees; Bermuda grass; small barn and shed. Best place in the West for party with two or three good stallions and one or two jacks. Four blocks from depot. Fenced high, woven wire. Priced to sell. For full information, write

L. C. BERRY, Eldorado, Okla.

You can make big money farming in Arkansas

Same Latitude—Same Crops

THE soil is newer, richer and much lower in price. A splendid climate makes it possible to produce bountiful crops of nearly every variety known to man. It will pay you to investigate.

Enrich Yourself

Supplying a Great Demand

The price of beef is steadily rising, due to the shortage of beef cattle. It is no longer profitable to raise cattle on ranges. That was a wasteful method, and with the passing of free pasturage the costs are too great to leave a profit. Yet people need beef and are willing to pay good prices to get it. That is the demand you may profit by supplying.

Search all over this continent and you will find no section in which cattle do as well or can be raised as cheaply as on the plains of northwest Texas. It is the natural home of the steer. Here great herds roamed in the early days. They fed on the luxurious grasses and went to market without grain. Latterly their weights and the owners' profits have been increased by grain-feeding near to the slaughtering market. But that is now too expensive, considering the high price of corn.

It has been found that the steer can be fed and finished here on ensilage and milo and kafir grain. The cost of feeding is reduced — the quality of the meat improved — a better price is secured and once again beef cattle are money-makers.

The territory available for this work is the millions of acres of northwest Texas, where the rainfall is less than twenty inches a year. It is too dry for corn, but milo and kafir thrive under dry-farming methods.

Herefords are graded up to nearly pure blood and they are the most profitable animal to feed. Weanlings can be brought up to 1,400-pound steers in less than three years, and this young beef sells well, saving a year's time, interest and feed.

Hogs thrive on the same feed. This is their climate, too, as there are no diseases in the high, dry air.

Lately it has been found that upward of one million acres of this fertile prairie is underlaid with an inexhaustible supply of pure water, near enough to the surface to be economically pumped and used for irrigation. This water makes the production of tremendous crops of feed easy and certain. With water, 50 bushels of wheat, 100 bushels of oats and 80 bushels of kafir are not unusual yields, and a small acreage of the irrigated land with a larger area of the dry land forms an ideal stock farm. Irrigation here means stock-feed insurance and is a guarantee of your profit.

The opportunity here is described in detail in a new folder just issued by the Santa Fe entitled "The Shallow Water Country of Northwest Texas." I would like every stock-grower in the country to read it as well as our leaflet, "Letters from Farmers." Then, if you are interested in following the matter further, I will be glad to place at your service the faculties of this department to assist you in finding the location best adapted to your needs.

The interest of the Santa Fe in settlers along its lines does not cease with helping them to select a location. We have a corps of agricultural demonstrators, who are employed by the railroad to help settlers to learn as quickly as possible the best crops and methods of handling for any given section. The assistance of these men will be yours without cost, and the enthusiastic letters from settlers already here will show you that their advice means a large increase of profit to those who have taken advantage of it.

Drop me a postal for this "Northwest Texas" folder and leaflet.
C. L. Seagraves, General Colonization Agent, A. T. & S. F. Ry,
2511 Railway Exchange, Chicago.

CUSTOMERS APPRRECIATE THE PAPER.

To the American Breeder:—The sending out of Mare Owner Editions is the most profitable method of advertising that I have ever tried. The customers appreciate these papers and study all the pictures and read all the paper from first to last. A person who studies these pictures and reads all about them must be educated along such lines. If our customers are being educated along breeding lines and better stock (which by reading the Mare Owner Editions they are) they appreciate the better class of stock. The "fogy" breeding ideas which were imbedded in the minds of so many are now giving way and these men think and talk on matters of breeding very intelligently. Last year I sent out one hundred papers which did me a great deal of good, so this year I am going to send to every customer an order about one hundred extras.—Roy E. Graham, Johnson County, Ind.

ALFALFA AS A MONEY MAKER

Rich alluvial soil is what is wanted for the successful growing of Alfalfa, the king of forage crops. The Red River Valley has this kind of soil in abundance—nothing better anywhere. We can recommend this land to well-to-day farmers who want something really good. Ample rainfall.

A CROP EVERY YEAR.

Alfalfa Tiller That renovates, mulches, stimulates, without injury to plant. Catalog Free. **Light Draft Harrow Co., Marshalltown, Ia.**

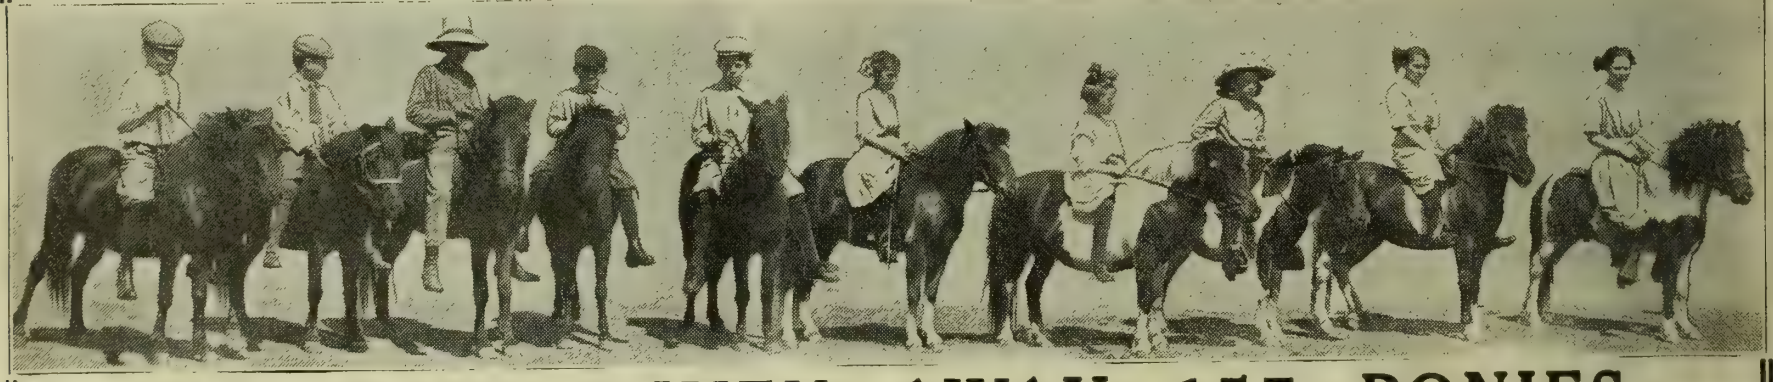
THIS PONY FREE

"WHITE SOX"

"WHITE SOX" is a beautiful 3-year-old Shetland, almost solid black, with four white "stockings" and long silky mane and tail. He stands about 42 inches high and weighs around 300 pounds. We have already given away 157 ponies to boys and girls who joined our Pony Club and "White Sox" is just as fine as any of these other 157 beautiful ponies. This is saying a great deal when you consider that we go around to all the big pony farms and pick out the very best ponies we can get for children. "Whit Sox" is as gentle and lovable as any pet could be and is thoroughly broken to ride and drive. Hitched up in his nobby little pony cart, with his nickel trimmed harness flashing in the sunlight he makes the prettiest picture you ever saw. Not only is he pretty, but he can carry along a whole buggy load of happy children at a fast clip—faster than many big horses can. "White Sox" and his elegant outfit, described in the opposite column, can be yours if you are willing to do us a favor. Send us your name today and we will tell you just how to get him. Don't delay, but do just as our 157 happy pony winners did and send us your name at once.

WE WILL GIVE YOU OR SOME OTHER BOY OR GIRL THIS PONY WITH COMPLETE OUTFIT

DO YOU WANT THIS OUTFIT?



SEND US YOUR NAME TODAY

IF YOU WANT TO OWN "WHITE SOX"

THE OUTFIT

ALONG with "White Sox" we send the finest and most complete Pony Outfit that you ever saw. A stylish four wheeled pony buggy—strong and easy riding—a handsome black, nickel trimmed harness and a hand made saddle and Indian horsehair riding bridle. No matter how rich a child's parents might be they could not buy him a better or more complete outfit than we send with "White Sox" to you or some other boy or girl. The horsehair bridle is made especially for us by an old cowboy at Deer Lodge, Montana, and is hand woven out of many-colored horsehair—red, black, yellow, green and white. It is woven into beautiful Indian designs, mounted with fluffy hair tassels, and the reins end in a real cowboy quirt. You will be the first to have one of these bridles in your neighborhood if you send us your name and get "White Sox" and his whole Outfit. We had just as soon send this wonderful Pony and Outfit to you as to any other boy or girl but you must send your name and address right away so we can tell you all about our easy plan. Use the coupon below, and mail it now.

As soon as we hear from you we will tell you how to go ahead and get "White Sox" for your own. We have a wonderful Pony Club that gives Shetland Ponies to its members and you can join this club without spending a cent of your own money and thus be eligible to get a pony free. Don't let anybody persuade you that you can't get this beautiful little pony and outfit because our plan of giving away ponies is different from others. The fact that we have already given away 157 ponies to boys and girls in 30 different states, from the state of Vermont to the state of California, several going over 1,800 miles from St. Paul, is proof that we give ponies away. The postmaster or banker in your town knows that the Webb Publishing Company of St. Paul, Minnesota, established for more than 30 years, is one of the largest publishing houses in the United States and can afford to give away ponies to advertise its papers. We never heard of one of the 157 members of our Pony Club to whom we have already given ponies until they wrote and told us they wanted a pony and that is why you must send us your name and address at once if you want us to send you "White Sox" and his dandy Outfit.

WE HAVE GIVEN AWAY 157 PONIES

HERE ARE THE NAMES OF A FEW OF OUR 157 LUCKY PONY WINNERS

"Bob," John B. Corn, Jr., Pulaski Co., **Arkansas.**
"Sweetheart," Lillias E. T. Howe, Nevada Co., **California.**
"Pippin," Doris Navarette, Fairfield Co., **Connecticut.**
"Pal," Julia Federer, Champaign Co., **Illinois.**
"Heinie," Clarence Niemoeller, Bartholomew Co., **Indiana.**
"Justin," Norma Thorsen, Palo Alto Co., **Iowa.**
"Jerry," Cleta Johnson, Douglas Co., **Kansas.**
"Keno," Vanessa Lykins, Bourbon Co., **Kentucky.**
"Merry," Isabelle Whitcraft, Baltimore Co., **Maryland.**
"Clipper," Adelaide J. Stever, Bristol Co., **Mass.**
"Peter," Charley Mahoney, Chippewa Co., **Michigan.**
"Star," Clarence Grover, Trail Co., **Minnesota.**
"Mac," Ruth Mead, Saline Co., **Missouri.**
"Reggie," Clifford Smith, Yellowstone Co., **Montana.**
"Bumps," Barton Lewis, Dawes Co., **Nebraska.**
"Busy," John H. Albrecht, Jr., Camden Co., **New Jersey.**
"Sultan," Donald M. Robinson, Saratoga Co., **New York.**
"Silver-Tips," Georgia Lee Barringer, Stanley Co., **N. Car.**
"Paddy," Grace McGogy, McIntosh Co., **N. Dakota.**
"Flo," Lloyd Thomas, Allen Co., **Ohio.**
"Peaches," Alicia M. Davenport, Klamath Co., **Oregon.**

"Lulu," Louise Damron, Benford Co., **Virginia.**
"Scotty," Catherine Rohrbeck, Pacific Co., **Washington.**
"Princess," Geneva Holt, Nicholas Co., **W. Virginia.**
"Polly," Alfred Hokenstad, Dane Co., **Wisconsin.**

NOTICE WE PRINT THE NAMES OF 30 OF OUR 157 LUCKY PONY WINNERS. We would gladly print the whole 157 names if we had room for them here, but we will send them to you just as soon as we hear from you. Possibly some of these happy children live in your county or a county near you and, if so, you probably know them because our Lucky Pony Winners are the best known children in their neighborhoods. However, it doesn't make any difference where you live; if you send us your name and are the lucky child to get "White Sox," he and his whole outfit will be shipped without one cent of cost to you. If you send us your name the day you read this, we will send you 1,000 votes for "White Sox" and also a big surprise that will double your chances of getting a Shetland Pony. We haven't room to explain it here, but we will tell you as soon as we hear from you. Remember, you can't get "White Sox" until you send us your name and become a member of the Pony Club, so sit down and write us at once. Don't miss this grand opportunity!

EVERY CLUB MEMBER GETS A PRIZE.

Every single child who sends us his name and joins our Pony Club will receive a handsome prize of his own choosing. Besides the Pony Outfit (and the Big Surprise we have for you), we will give bicycles, diamond rings, sewing machines, rifles, cameras, gold watches, flashlights and many other wonderful rewards that you never could get until now. Of course, "White Sox" and his dandy Outfit is the best prize of all and you have the same opportunity to get him as any other boy or girl if you send us your name now.

SEND YOUR NAME TODAY.

Our ponies are given away so quickly that you will be more sure of getting this one if you sit right down now and send us the coupon with your name and address or a letter (either way will be alright). The work we require you to do to be a full-fledged Pony Club Member, eligible to get "White Sox," is so easy that any child who could drive a pony can do it. We shall write you promptly just as soon as we hear from you.
